

# TESTIMONIALS

IN FAVOUR OF THE

## IMPERIAL DICTIONARY.

*From the Rev. JAMES ROBERTSON, D.D., Professor of Divinity and Ecclesiastical History, Edinburgh College.*

The comprehensive design of the work appears, from the specimen of it which I have had an opportunity of examining, to have been fully entered into by the Editor.

The outline given in the prospectus has been filled up by him with fidelity, perspicuity, and precision. His definitions, in particular, are clear, accurate, and concise; and where a word or term occurs, which is used in more than one signification, its different shades of meaning are distinguished and illustrated with much acuteness.

Having enjoyed for many years the friendship of the Editor, I am enabled to add that his integrity of character and indefatigable perseverance afford a most satisfactory guarantee that, if his health be continued, there will be no falling off in the portion of the work which, I understand, yet remains to be executed.

*James Robertson*

*From JOHN CRUICKSHANK, LL.D., Professor of Mathematics, Marischal College, Aberdeen.*

It appears to me fully to make good what is promised in the Prospectus, and to supply a want which has been long and greatly felt. From my knowledge of the talents, attainments, and industry of the Editor, I feel confident that there will be no falling off in the subsequent Numbers, but rather the reverse.

*John Cruickshank, LL.D.*

*From PHILIP KELLAND, Esq., Professor of Mathematics, University of Edinburgh.*

I have examined with some care the first three parts of your "Imperial Dictionary," and I have derived great pleasure and much instruction from the task.

To the *Scientific Terms* I have paid the most scrupulous attention, and I find them explained in terms sufficiently clear to be understood by all, at the same time that they are strictly accurate.

*Phillip Kelland*

*From JAMES BOYD, LL.D., F.S.A. Scot., and Senior Master of the High School, Edinburgh.*

After a careful examination of the first and second Parts, I feel warranted in affirming, that, so far as I am competent to judge, the plan of the work is excellent, and that it is wrought out with great ability. Indeed, until I learned the fact that the MS. had been submitted to the revision and correction of men eminent for their attainments in the several departments of human learning, I was at a loss to comprehend how one individual, even with the years of labour which I know your Editor has devoted to it, could so successfully have performed a task, which must, without such cooperation, have required for its accomplishment the energies of an Intellectual Hercules.

*James Boyd*

*From W. M. GUNN, F.S.A. Scot., one of the Masters of the High School, Edinburgh.*

I have much pleasure in stating, and I feel it to be a duty to do so, that I deem it a production of the greatest merit, and likely to supersede, for ordinary use, all existing works of a similar nature.

*W. M. Gunn*

*From GEORGE MANSON, Head-Master of the General Assembly's Normal Institution, Edinburgh.*

Should the successive Parts display the same amount of Editorial ability, and of interesting graphic illustration, as those already published, this work, when completed, will stand deservedly at the head of its class, and will fully justify the title which you have given it—"The Imperial Dictionary."

*Geo Manson*

From ROBERT HISLOP, Rector, Normal Seminary, connected with the Free Church, Glasgow.

It would assuredly be no easy matter to surpass the precision of the definitions, the accuracy of the descriptions, or the beauty and effectiveness of the wood-cuts; whilst, as an Etymological authority, it is sufficient to say, that it embodies all the excellencies of the great work of the American Lexicographer.

*Robert Hislop*

From Rev. RONT. J. BROWV, D.D., Professor of Greek, Marischal College, Aberdeen.

It appears to me to be very well conceived, and ably executed.

*R. J. Brown*

From Rev. JOHN FLEMING, D.D., Professor of Natural Science, New College, Edinburgh.

GENTLEMEN,—So far as the three parts of your "Imperial Dictionary" enable me to form an opinion of the character of the publication in which you are engaged, I am satisfied that a great deal of industry and discrimination have been exercised in compiling it, and that the work will place within the reach of many, a great amount of valuable and useful information, at present accessible only to a few. With these convictions I earnestly wish you success in your important undertaking.

*John Fleming*

From Rev. ALEX. BLACK, D.D., Professor of Ecclesiastical Theology, New College, Edinburgh.

A DICTIONARY was very much wanted, in which succinct and perspicuous explanations should be given of all the words that an English reader is likely to meet with in the most extensive perusal of the popular and scientific literature of the day; and the "Imperial Dictionary," published by Messrs. Blackie & Son, Glasgow, of which three parts have already appeared, gives promise of supplying that desideratum in the most admirable and satisfactory manner.

A peculiar feature of this Dictionary, which has hitherto been confined to encyclopedias and scientific works, consists of the frequent introduction of pictorial illustrations, which in the case of objects admitting of this species of explanation, present to the mind of the reader by the medium of the eye, a far more distinct representation of the reality than could be conveyed by a merely verbal description.

*Alex. Black*

From the Rev. JOHN BURNETT, LL.D., Vicar of Bradford.

I HAVE examined some numbers of the "Imperial Dictionary," and am highly pleased with the plan, and also with the execution of the Work. It combines in a small compass a Cyclopaedia and a General Dictionary, and notices the very latest improvements and discoveries. It cannot fail to be very acceptable to a large class of students.

*John Burnett LL.D.*

From Rev. W. H. STOWELL, Professor of Theology, Rotherham College.

I have examined the earlier parts of the "Imperial Dictionary," now in the course of publication by Messrs. Blackie and Son, and can conscientiously recommend it as being, so far as I know, the most complete Dictionary of our language. The illustrative wood-cuts are very beautifully and carefully executed, and add much to the value of the work.

*W. H. Stowell*

From the Rev. THOS. S. CRISP, Baptist College, Bristol.

I HAVE examined several portions of the "Imperial Dictionary" with care, and as far as I can venture to pronounce on the character of such a Work, I readily bear my humble but decided testimony to its great merits.

The significations of the words are given fully, and with clearness and accuracy; while the reader is furnished with a large amount of scientific information, in an interesting form, and within a very moderate compass. The Engravings, which are necessarily minute, are executed with great spirit; and the explanations of terms of Art have evidently been prepared with much care by able literary writers.

The Editors have, I think, succeeded in rendering it, in no ordinary degree, a Work of valuable, as well as agreeable reading.

*Thos. S. Crisp*

From the Rev. HORATIO JAMES, Vicarage, Cole St. Alderbury, Gloucestershire.

I HAVE no hesitation in stating from what I have already seen of the "Imperial Dictionary," that it promises to be a very useful and valuable publication. It embraces a very wide field of inquiry, and gives information in a concise and simple manner. It is exactly the book that has been long wanted by the general reader, giving the meaning of technical and scientific terms for which we should look in vain to any of the existing dictionaries.

*Horatio James*

*From the Rev. WALTER SCOTT, President and Theological Tutor of Ansdale College.*

I HAVE examined the first division of "Blackie's Imperial Dictionary," and it appears to me to be decidedly the best Work of the kind in the English Language.

*Walter Scott*

*From the Rev. H. GOUGH, M.A., Fellow of Queen's College, Oxford, and Head Master of Caliste Cathedral School.*

If the work be completed with the same comprehensive fulness and elaborate accuracy as the parts already published, it cannot fail to become the standard work of reference in the English language.

H. GOUGH, M.A.

*From the Rev. A. BATH POWER, M.A., Lower Close, Norwich.*

I HAVE examined the three published parts of the "Imperial Dictionary," and have found this portion very copious and complete; much knowledge is displayed in many of the Etymologies, and great distinctness and accuracy in the many definitions which came under my notice. I looked carefully over a large number of the explanations of technical words, and found them correct and comprehensive; I observed very many which are not generally included in Scientific Dictionaries.

I consider Messrs. Blackie and Son's present undertaking an important addition to the Student's Library, and have no doubt of its being very useful in the pursuit of Science.

A. BATH POWER.

*From JAMES THOMSON, LL.D., Professor of Mathematics, University of Glasgow.*

I HAVE examined a considerable portion of Messrs. Blackie and Son's "Imperial Dictionary," and I regard it as a work of much value. It contains a large number of words not to be found in Johnson's, Walker's, or other standard and popular Dictionaries, and it is thus well fitted to the present state of the arts, and of human knowledge generally.

The explanations of the meanings of the various words and terms are given simply and clearly; and they cannot fail to be intelligible and satisfactory to all readers of ordinary intelligence.

*James Thomson*

*From the Rev. E. COBHAM BREWER, CLK., LL.D., Head Master of King's College School, Norwich.*

GENTLEMEN,—Having been requested by one of your Agents to state my opinion respecting the "Imperial Dictionary," I have great pleasure in bearing testimony to the beauty of the type, the clearness of the Definitions, and to the great addition of words of recent introduction into our language. I have compared it with several contemporary publications of a similar character, and hesitate not for one moment to say, it is decidedly the best of those which have come under my notice, although a large field is still left for future labour.

*E. Cobham Brewer*

*From R. F. JAMES ROBERTSON, M.A., Principal of Bishop's College, Bristol.*

HAVING examined, as far as my leisure would permit, the three first divisions of your "Imperial Dictionary," I have much pleasure in bearing testimony to its great promise of usefulness. While to those readers who have not had the benefit of a classical education, and, therefore, are not acquainted with the origin of the many scientific and technical terms that occur so frequently in modern publications, it must prove of especial service, the scholar, too, will, I am sure, derive from its perusal great gratification and advantage, not only from the clear and satisfactory elucidation of the various acceptations of each word, but also from the really useful information that pervades the whole. In short, I cannot but look upon it as supplying a great desideratum at the present day, and if carried out in accordance with the parts already published, it will, in my opinion, be a valuable addition to our lexicographical works.

*James Robertson*

*From the Rev. JOHN MUENE, M.A., Principal of Huddersfield College.*

AFTER the numerous attestations already given by competent judges to the merits of the "Imperial Dictionary," now in course of publication by Messrs. Blackie & Son, of Glasgow, it may appear superfluous or presumptuous to add the expression of my opinion, yet, as I have been requested to do so, I feel no hesitation in saying, from an inspection of the portions already published, and there can be no doubt, from the strongly attested character and ability of the Editor, that the entire Work will exhibit a uniformity of excellence, that the Dictionary will, when complete, form a most valuable addition to English Literature. The careful and well-considered Etymology,—the brevity, yet clearness and fulness of the Definitions,—the accurate discrimination of Idiom, together with the beauty of the Wood Cuts illustrative of the terms of science or of art, deserve the highest commendation,—while the explanation of Classical terms and allusions, so often to be met with in the works of our best writers, especially the poets, stamps upon it a peculiar value. As a book of reference, for all ordinary purposes, it appears to me to supersede the necessity of an Encyclopedia; and, apart from its value as a complete standard Dictionary of the English Language, it will form a repository of widely varied, yet highly useful and interesting information.

*John Muene*

# OPINIONS OF THE PRESS.

## DOUGLAS JERROLD'S WEEKLY NEWSPAPER.

"This is a monthly issue of great value. A Technological and Scientific Dictionary, from the great additions of such terms to our language in the last thirty years, has become a necessity, and the present seems admirably calculated to fulfil the want. The just medium between a common dictionary and an encyclopedia seems to be properly adjusted. It is copiously illustrated with Wood Engravings, and the explanations are given with pith and point, erring, if anything, on the side of brevity, which indeed should not be considered an error, as such a book is made for rapid reference, and the long details too usually introduced perplex rather than enlighten the reader. The present work should beat the right hand of every man to solve a doubt at the instant. For students it will be invaluable."

## CHESTER COURANT.

"We have no hesitation in recommending it to the favour of our readers, as a most useful, interesting, and able work of universal reference."

## BRISTOL MERCURY.

"The work meets one of the wants of the times."

## PLYMOUTH AND DEVONPORT JOURNAL.

"It is beyond comparison the best dictionary in our language." . . . "This excellent work has now reached the letter I, about the third of the alphabet, the last part of which is numbered 12; we do not think, therefore, that the 'Imperial Dictionary' can be well completed in the twenty-four promised parts. Far better would it be that twenty-four more parts were added, than that such a meritorious and useful work should be shorn of a single article of value. It has hitherto come on in a pre-eminent manner, and we trust that no attempt at brevity for the sake of bringing valuable matter in the short compass announced in the prospectus, will be attempted in a book of such sterling excellence. The 'Imperial Dictionary' will be the best publication of the kind, if continued throughout as it has been brought to the present time, and the exact number of parts can be of very little consequence to such persons as take in the work. Our earnest advice to the publishers, therefore, is to finish the Dictionary as it has been commenced, notwithstanding any error which may have been made in the estimated probable number of its parts."

## SCOTTISH GUARDIAN.

"The 'Imperial Dictionary' may be read as well as consulted, as it contains a great variety and amount of useful information. The plan of the work is excellent, and we think it certain, that if it proceeds as it has commenced, the Publishers will find their enterprising exertions rewarded by an ample share of success."

## NORTHERN WARDER.

"Beyond all its claims to be the most, we may say the only, complete English Dictionary, it has two features new in a work of this kind. It is a compact mass of pleasing and most interesting general information, apparent in every definition, and fully rebuts the allegation that Dictionaries are only *dry sort of reading*. The other new feature is the illustrative cuts, which are numerous and finely executed, conveying at a glance by the eye, that which no words could by the ear, to the understanding. The idea of the illustrations is a happy one well applied."

## GLASGOW COURIER.

"The matter and appearance of this superb book are both unexceptionable. When completed it will make a magnificent volume; and we trust that the encouragement given to it by the public will be such as to justify the expectations of its spirited proprietors."

## INVERNESS COURIER.

"We have here a most valuable word-book, in itself a library of Dictionaries, and comprising a large amount of useful and interesting information connected with literature, art, and science."

## GLASGOW CITIZEN.—SECOND NOTICE.

"We can safely pronounce this to be the most really useful, comprehensive, and entertaining book of information, in the form of a Dictionary, we have ever seen; and strongly do we recommend it as invaluable for the purposes of the family or general private library."

## DUNDEE COURIER.

"We cannot too heartily recommend the 'Imperial Dictionary' to all who wish to know and understand the words and expressions now in daily use in our own language."

## ABERDEEN JOURNAL.

"The 'Imperial Dictionary' is just what a Dictionary ought to be, and neither more nor less. It diverges not too much on the one hand to the nature of a minor Encyclopedia, nor on the other, does it sink down into the character of a mere word-book or vocabulary. It hits the felicitous medium; and, unlike most works of the kind, it is a perfectly readable book—in other words, one fitted for continuous reading; and we are confident we go not too far, when we characterize it as a work in which the idle may find amusement—the busy spend usefully a vacant hour—to which the learned may refer for more distinct information—and which the unlearned may consult with material advantage."

## CALEDONIAN MERCURY.

"After a careful inspection of the work, so far as it has yet gone, we find its promises amply realised; the definitions are clear and concise, and the explanations and descriptions so full as to impart to it the combined character of an Encyclopedia and Dictionary; the names of things being always accompanied by accounts of the things themselves, drawn apparently from the latest and best sources of information, with the addition already alluded to, of a pictorial representation of the thing described."

## FLIX FARLEY'S BRISTOL JOURNAL.

"A work on a scale so comprehensive as to embrace subjects hitherto confined to ponderous Cyclopedias, as well as the lexicography of our language. Such a work has long been wanted, and the specimen before us conveys an assurance that it is in able hands, and will, when complete, supply the best English Dictionary that has ever appeared since Todd's Johnson, with the advantage, too, of embracing many thousand words which have since then been adopted in our vocabulary."

## AGRICULTURAL GAZETTE.

"We beg to call the attention of our readers to a publication of the greatest value to any of them who may be desirous of understanding their own language, more especially in its technical and relative uses and meanings. A dictionary has at length been published guiltless of the charge of being 'dry reading'; its pages are covered over with Nautical, Architectural, Zoological and Botanical illustrations, and filled with explanatory paragraphs, something more than mere definitions. . . . The arduous and tedious labours of an industrious Editor, assisted by colleagues in the various departments of those arts and sciences whose technology he has investigated, are now being developed in a work which will do honour to himself, credit to its publishers, and great good to its readers."

## PERTSHIRE CONSTITUTIONAL.

"The whole scope of this superb production is of a most comprehensive nature, and supplies a desideratum that no mere dictionary of terms on such a limited scale ever supplied before—partaking as it does of the nature of an Encyclopedia rather than the dry details of an ordinary explanatory lexicon—going much further than giving the mere conventional acceptance of words or their pronunciation. The reader has their etymological affinities presented to his attention, and may even glean and store his mind with no small degree of scientific and technological information, while he will find amusement as well as instruction in every page, although not consulting the work in the light of an authority for reference. The letterpress is beautiful too, and the typography altogether inviting to the eye."

## FIFESHIRE JOURNAL.—SECOND NOTICE.

"A work which ought, indeed, to be in every library, and to the pages of which there is no one who can fail to be obliged to have recourse at times, and to which recourse will always be had with advantage and profit. From the richness and fulness of its contents, 'The Imperial Dictionary' is calculated to supersede whole libraries of dictionaries, and the elegance of its form, typography, and illustrations, are additional recommendations of it to general use."

## PREFACE.

FOR a number of years past a great revolution has manifestly been going on in the English language. Many words and terms formerly current have now passed into oblivion; many others have acquired new meanings, while the old ones have become obsolete, and in a greater variety of instances, new significations have been added, while the old ones are still retained; and thousands of words and terms have been introduced into our language which were altogether unknown in the time of Johnson, or even at a considerably later period. In ordinary literary and non-scientific works also, many words and terms are introduced which were formerly only to be met with in works of a strictly scientific character, and which have not hitherto found their way into any of our common English dictionaries. The reader must therefore remain in utter ignorance of the meaning of many of these terms, unless he be possessed of a library of dictionaries of the various departments of human knowledge, and even with that advantage, he will be often at fault, as many such terms have not yet been introduced into any dictionary whatever.

Various circumstances have contributed to bring about this result, but more especially the rapid progress which has in modern times been made in numerous departments of inquiry, the discoveries in science and the arts, the extensive applications of science to the various branches of industry, the popularization of knowledge, and its diffusion among the masses of the people.

From what has been stated above it appears obvious that an English dictionary of a comprehensive character—embracing all authorized English words both old and new, with their etymologies and various significations, and also the principal terms employed in the arts and sciences; and serving as a book of easy and ready reference to all classes of English readers, must prove of the highest utility, and must tend powerfully to facilitate the progress and diffusion of general knowledge. To supply this *desideratum* is the great object of the IMPERIAL DICTIONARY.

The principal dictionaries of the English language in use at present, are Johnson's, first published in 1755; Richardson's, commenced in 1826; and that of Webster, of America, first published in this country in 1832.

Johnson's dictionary, although it must ever be regarded as a monument of the ability, labour, and research of its celebrated author, is nevertheless in some respects a very defective

work. The etymological part is meagre and imperfect, being copied chiefly from Skinner and Junius; a great number of well authenticated English words are wanting, and although this defect has been in part supplied by Mason and Todd, the list is still imperfect even in common words, and still more defective from not including terms of science. Johnson's definitions are constructed often without sufficient consideration, and without any systematic plan; and he frequently errs in tracing the successive significations of a word. Many of Johnson's definitions, moreover, though they may have been accurate in his day, have now become erroneous or defective from the changes, already referred to, that have taken place in our language.

Richardson's dictionary, a work of undoubted merit, may be considered a critical rather than a practical dictionary, and one better adapted for the philological student than the general English reader. Instead of arranging the words in strict alphabetical order, and explaining each separately in its proper place as in common dictionaries, Richardson groups the derivatives under their primitives, and explains each group, or rather the primitive word in each group, by a short running commentary. Thus the verb *to move*, and eighteen derivatives, as *movable*, *movement*, *motion*, *motive*, &c., are classed and braced together, and an explanation given of the verb, while no notice is taken of the distinct meanings of the derivatives, with exception of the word *motive*. No one can consult Richardson's dictionary to any extent without perceiving the inconvenience of this arrangement. Indeed, for all general purposes it is to the ordinary reader little better than a sealed book. In the selection of words admitted as English, Richardson's dictionary is more limited than Johnson's as enlarged by Todd, and scientific and forensic terms are intentionally excluded. On the other hand, it contains a multitude of obsolete words and antiquated derivatives, many of which are of very questionable utility.

Webster's dictionary, which forms the basis of the present work, is acknowledged both in this country and in America to be not only superior to either of the two former, but to every other dictionary hitherto published. It is more copious in its vocabulary, more correct in its definitions, more comprehensive in its plan, and in the etymological department it stands unrivalled. The last edition of Todd's Johnson contains fifty-eight thousand words;—Webster increased the number to seventy thousand. For all practical purposes, the chief value of a dictionary consists in its definitions;—that is, in its giving a clear, accurate, and complete description of all the various shades of meaning which belong, by established usage, to the words of a language. In this department of lexicography Johnson achieved a great deal, and greatly lightened the labours of his successors; but still he left much to be accomplished. Webster has improved such of Johnson's definitions as were defective, corrected such as were erroneous, and added upwards of thirty thousand new definitions, which are distinguished by clearness, terseness, and completeness. In numerous instances also, he has pointed out the distinctions between words apparently synonymous, so that, to a great extent, his dictionary supplies the place of a book of synonyms. Webster spent thirty years of labour upon his dictionary; of these no fewer than ten were devoted to the etymological department alone, which for accuracy and completeness is unequalled. In tracing the origin of English words, he cites from more than twenty different languages which he studied attentively. Indeed, he is the only lexicographer who has adduced the Eastern as well as the European languages in the illustration of the English, and by this means he has thrown much light on the origin and primary signification of many words, and on the affinities between the English and many other languages.

Another important feature of Webster's dictionary is the introduction of the terms of science and art. In this respect it is distinguished from Todd's Johnson, in which thousands of such words are either not inserted, or are explained imperfectly.

Notwithstanding, however, the acknowledged superiority of Webster's dictionary over all others hitherto published, it does not come up to our idea of what a dictionary ought to be, in order fully to meet the wants of the present day. Webster has done much, but he has not done enough. He has omitted many English words and significations in frequent and well-authorized use; his list of scientific and technical terms is not sufficiently copious, and in defining or explaining those he has selected, he has not always consulted the best and most accurate authorities. Some of his definitions likewise have become inaccurate, owing to the progress and the improvements made in the arts and sciences since the time he wrote. There are some other faults of a minor description to be found in Webster, such as wrong accentuations, unwarranted alterations in the orthography of certain words, and instances of false orthoepy.

In adopting Webster's dictionary as the basis of the IMPERIAL DICTIONARY, the great object of the Editor in preparing the latter has been to correct what was wrong and to supply what was wanting in Webster, in order to adapt the new work to the present state of literature, science, and art. Accordingly, every page of Webster has been subjected to a careful examination, numerous alterations and emendations have been made, a vast number of articles have been rewritten, very many of Webster's explanations of important terms have been enlarged, and many new and more correct definitions of others given; new senses have been added to old words, where they were found wanting, and a multitude of new words and terms have been introduced, especially in the scientific and technological departments; so that to Webster's addition of 12,000 words to Todd's Johnson, a further addition has been made of at least 15,000 words and terms.

Generally speaking, the IMPERIAL DICTIONARY aims at containing all purely English words, and all words not English in ordinary use, together with the principal technical and scientific terms, and such as are to be met with in works not purely scientific. More particularly this Dictionary has for its object:—

1. To comprehend all the words contained in Johnson's dictionary, with the additions of Todd and Webster, and words selected from the other standard dictionaries and encyclopedias, together with many thousand words and terms in modern use, not included in any former English dictionary.
2. To exhibit the etymologies of English words, deduced from an examination and comparison of words of corresponding elements in the principal languages of Europe and Asia.
3. To render the pronunciation of words easy and obvious, by accentuation, by marking the sounds of the accented vowels when necessary, by writing the word a second time in different letters when the pronunciation is attended with any difficulty, or by general rules.
4. To give accurate and discriminating definitions of the words, illustrated by examples of their use, selected from the best authors, or by familiar phrases of undoubted authority.
5. To give explanations of Scripture terms and phrases, and when necessary, to cite passages from our common version, not only to illustrate the scriptural or theological sense, but even the ordinary significations of the words.

6. To give accurate definitions and explanations of technical and scientific terms, including those of recent origin, in

7. To distinguish words that are obsolete, obsolescent, unusual, partially authorized, colloquial, local, low, or vulgar; care being taken to retain those words which, though now obsolete, occur in our old English authors of celebrity.

8. To introduce such *foreign words* and terms as are frequently met with in English authors, together with some of the more expressive words of the Scottish language.

9. By the assistance of **DIAGRAMS** and **ENGRAVINGS ON WOOD** to furnish clearer ideas of various subjects and objects, and of the signification of various terms, than could be conveyed by mere verbal description. For this reason numerous terms in Architecture, Antiquities, Botany, Zoology, Heraldry, Mechanics, &c., frequently only to be understood by the aid of a figure, have been elucidated and rendered clear by engravings. Besides illustrations of terms, there have been introduced representations of the principal plants used in the arts, manufactures, and in medicine, of animals interesting from their habits or from their value to man, copies of many Mythological figures from celebrated sculptures and paintings, and a variety of other illustrations tending to please, while they also instruct.

Although the **IMPERIAL DICTIONARY** does not profess to contain all the terms of every art and science, yet it will be found to contain the principal and most important, and those which are most generally used, and certainly many more than the general and non-scientific reader is likely to meet with. Especial care has been taken to give explanations, as clear, accurate, and full as possible of terms connected with those sciences and branches of science which are most important in their practical applications; such as Natural Philosophy, Mechanics, Mathematics, Chemistry, and Mineralogy. Of such terms, the number admitted is very great, and also of those employed in Architecture, Engineering, Machinery, Manufactures, Commerce, Agriculture, Geology, Navigation, and Astronomy. In Botany, as it was found impossible to admit all the orders, genera, and species, only those have been selected which are most remarkable, or which are most important in an economical point of view. A similar plan has been adopted with regard to Zoological terms.

Neither labour nor expense has been spared in order to render this dictionary complete in all its departments, and worthy of public approbation. Upwards of ten years of unremitting toil and research have been spent by the Editor in preparing the work. The scientific terms have been revised by individuals of high standing in various departments of science and art, who, besides

## PREFACE.

securing the accuracy of the definitions of the terms included by the Editor, have also supplied a variety of additional terms, many of them of recent origin. The other additional words and terms have been carefully selected and prepared by reference to the best and most authentic sources.

In selecting the illustrative figures, the greatest care has been taken to secure perfect accuracy; a work of no small difficulty, when the number and variety of sources consulted are taken into account, and when it is remembered that different authorities, especially writers on the natural sciences, often describe the same object under different names. There is no more fruitful source of error in popular works, or of perplexing difficulty to students, than this inconstancy of scientific nomenclature.

The IMPERIAL DICTIONARY will be found to contain, along with the etymologies and the definitions of words and terms, a large amount of useful and interesting information connected with literature, art, and science. A simple inspection of its pages will show, that, wherever it may be opened, it presents something to interest and instruct—some useful fact stated in concise terms—some important maxim or sentiment in religion, morality, law, or civil policy; so that the charge usually preferred against English dictionaries, namely, that they furnish but *dry sort of reading*, will not apply to this dictionary.

Notwithstanding the care that has been bestowed, the Editor is far from supposing that the present work is perfect, or even free from various errors and defects; but he indulges a hope that those of the IMPERIAL DICTIONARY will not be found more in number or greater in magnitude, than might reasonably be expected in an undertaking the execution of which is so difficult and laborious. The utmost efforts of the lexicographer, expended in exhibiting the whole circle of ideas embodied in the language of a highly civilized people, are only an *approximation* towards the great end in view. As the nearest approach yet made to this end, the Editor trusts this work will meet the wants of all those who consult a dictionary with no other view than hastily to remove the difficulty of the moment; that it will be found useful to the more advanced scholar; and that it will prove sufficient for the general purposes of all classes of English readers.

## DESCRIPTION OF THE FRONTISPIECE.

THE picture from which our Frontispiece has been engraved, was painted by Raffaele, when under thirty years of age, for Pope Julius II. about the year 1509. It is in fresco, and painted on the wall of one of a superb suite of apartments in the Vatican, called *La camera della Segnatura*. The size of the picture is 26 feet 6½ inches in length, by 15 feet 11 inches in height. Originally named "PHILOSOPHY," but now better known by the very inappropriate name, "THE SCHOOL OF ATHENS," this painting emblemizes the wisdom of the ancients in a representation of the learned men of ancient times. Raffaele has here assembled in a large atrium, in the noble style of Bramante, many teachers of philosophy with their scholars, though living at different periods and in different countries; some are seen imparting instruction to an admiring audience, others demonstrating problems to surrounding pupils, some thoughtful, others communicative; each individual following the bent of his own genius.

Plato, and Aristotle his disciple, occupy the middle of the scene, and are holding a disputation. Plato, the representative of Speculative Philosophy, points upwards with uplifted arm; Aristotle stretches his outspread hand toward the earth, as the source of his Practical Philosophy. At each side, stretching deeper into the picture, a double row of attentive hearers is seen. Near this group, upon the left, Socrates, counting on his fingers, explains his principles and their conclusions to the young warrior Alcibiades, who is recognized by the beauty of his countenance and by his costume. On the opposite side, are placed several persons engaged in different ways, in conversation and study. In the foreground, on both sides, the sciences of Arithmetic and Geometry, with their subordinate studies, occupy separate groups. On the left, as the head of Arithmetic, we observe Pythagoras seated and writing on his knee; a young man holds up to him a tablet, on which are drawn the harmonic chords discovered by that philosopher, and around are his disciples Empedocles, Epicharmus, and Archytas. On the right, Archimedes, bending down, constructs a geometrical figure on a tablet lying on the ground. Several scholars watch his progress; the different degrees of their intelligence being most strikingly depicted. To Archimedes, Raffaele has given the features of his patron and preceptor in architecture and geometry,

#### DESCRIPTION OF THE FRONTISPIECE.

Bramante, the celebrated architect. Next them are seen, as representing Astronomy and Geography, Zoroaster, the king of Bactria, his head adorned with a radial crown, and holding a celestial globe, and Ptolemy, the geographer, holding a terrestrial globe. Near to Zoroaster are two figures entering the hall, representing Raffaele and Peruguino his master in painting. Alone, and seated on the steps, Diogenes, the chief of the cynic philosophers, in a state approaching to nudity, meditates on a tablet which he holds in his hand. A youth, directed by an old man, turns from him to the teachers of a higher philosophy.

"The general arrangement of this painting is most masterly. Plato and Aristotle, with the group of their scholars, are placed together in dignified regularity, without any appearance of stiffness or constraint; on each side and around them greater freedom prevails, with the utmost variety in the attitudes of the figures which compose the groups; while again the leading masses are still balanced most satisfactorily. The style is grand and free; a picturesque unity of effect seems to have been the artist's aim throughout, and this aim he has attained most perfectly. The taste of design, both in the nude and in drapery, is excellent, and is everywhere guided by the purest sentiment of beauty; the group of youths, in particular, collected round Archimedes, is among the most interesting and natural of Raffaele's creations."—*Kugler*.

# INTRODUCTION.

## DEFINITION OF LANGUAGE.

**LANGUAGE** or *Speech* is the utterance of articulate sounds or voices, rendered significant by usage, for the expression and communication of thoughts.

According to this definition, language belongs exclusively to intellectual and intelligent beings, and, among terrestrial beings, to man only; for no animal on earth, except man, can pronounce words. The word *language* is sometimes used in a more comprehensive sense, and applied to the sounds by which irrational animals express their feelings or affections; as to the neighing of the horse, the lowing of the ox, the barking of the dog, and to the cackling and chirping of fowls; for the sounds uttered by these animals are perfectly understood by the respective species. So also language is figuratively applied to the signs by which deaf and dumb persons manifest their ideas, for these are instruments of communicating thoughts.

But language in its proper sense, as the medium of intercourse between men, or rational beings, endowed with the faculty of uttering articulate sounds, is the subject now to be considered.

*Written language* is the representation of significant sounds by letters, or characters, single or combined in words, arranged in due order, according to a rule.

## ORIGIN OF LANGUAGE.

We read in the Scriptures, that God, when he had created man, "Blessed them; and said to them, Be fruitful, and multiply, and replenish the earth, and subdue it, and have dominion over the fish of the sea," &c. God afterward planted a garden, and placed in it the man he had made, with a command to keep it, and to dress it; and he gave him a rule of moral conduct in permitting him to eat the fruit of every tree in the garden, except one, the eating of which was prohibited. We further read, that God brought to Adam the fowls and beasts he had made, and that Adam gave them names; and that when his female companion was made, he gave her a name. After the eating of the forbidden fruit, it is stated that God addressed Adam and Eve, reproving them for their disobedience, and pronouncing the penalties which they had incurred. In the account of these transactions, it is further related that Adam and Eve both replied to their Maker, and excused their disobedience.

If we admit what is the literal and obvious interpretation of this narrative, that vocal sounds or words were used in these communications between God and the progenitors of the human race, it results that Adam was not only endowed with intellect for understanding his Maker, or the signification of words, but was furnished both with the faculty of speech and with speech itself, or the knowledge and use of words as signs of ideas, and this before the formation of the woman. Hence, we may infer that language was bestowed on Adam, in the same manner as all his other faculties and knowledge, by supernatural power; or, in other words, was of divine origin: for supposing Adam to have had all the intellectual powers of any adult individual of the species who has since lived, we cannot admit as probable, or even possible, that he should have invented and constructed even a barren language, as soon as he was created, without supernatural aid. It may, indeed, be doubted, whether, without such aid, men would ever have learned the use of the organs of speech, so far as to form a language. At any rate, the invention of words and the construction of a language

must have been by a slow process, and must have required a much longer time than that which passed between the creation of Adam and of Eve. It is therefore probable that *language*, as well as the faculty of speech, was the *immediate gift of God*. We are not, however, to suppose the language of our first parents in paradise to have been copious, like most modern languages; or the identical language they used, to be now in existence. Many of the primitive radical words may and probably do exist in various languages; but observation teaches that languages must improve and undergo great changes as knowledge increases, and be subject to continual alterations, from other causes incident to man in society.

## A BRIEF ACCOUNT OF THE ORIGIN AND PROGRESS OF THE PRINCIPAL LANGUAGES, ANCIENT AND MODERN, THAT HAVE BEEN SPOKEN BY NATIONS BETWEEN THE GANGES AND THE ATLANTIC OCEAN.

We learn from the Scriptures that Noah, who, with his family, was preserved from destruction by the Deluge, for the purpose of re-peopling the earth, had three sons, Shem, Ham, and Japheth. This fact, a little obscured by tradition, was retained by our rude German ancestors, to the age of Tacitus.<sup>a</sup>

Japheth was the eldest son; but Shem, the ancestor of the Israelites and of the writers of the Scriptures, is named first in order.

The descendants of Shem and Ham peopled all the great plain situated north and west of the Persian Gulf, between that Gulf and the Indian Ocean on the east, and the Arabic Gulf and the Mediterranean Sea on the west, with the northern coast of Africa, comprehending Assyria, Babylonia or Chaldaea, Syria, Palestine, Arabia, Egypt, and Libya. The principal languages or dialects used by these descendants, are known to us under the names of Chaldee, or Chaldaic, which is called also Aramean, Syriac, Hebrew, Arabic, Ethiopic, Samaritan, and Coptic. Of these, the Chaldee and Hebrew are no longer living languages, but they have come down to us in books: the Samaritan is probably extinct or lost in the modern languages of the country, but the language survives in a copy of the Pentateuch; the Coptic is nearly or quite extinct, and little of it remains; the Syriac, Arabic, and Ethiopic are yet living languages, but they have suffered and are continually suffering alterations, from which no living language is exempt.

These languages, except the Coptic, being used by the descendants of Shem, we call *Shemitic*, or *Assyrian*, in distinction from the *Japhetic*. As the descendants of Japheth peopled Asia Minor, the northern parts of Asia, about the Euxine and Caspian, and all Europe, their languages have, in the long period that has elapsed since their dispersion, become very numerous.

All languages having sprung from one source, the original words from which they have been formed must have been of equal antiquity. That the Celtic and Teutonic languages in Europe are, in this sense, as old as the Chaldee and Hebrew, is a fact not only warranted by history and the common origin

## INTRODUCTION.

of Japheth and Shem, but susceptible of proof from the identity of many words yet existing in both stocks. But there is a marked difference between the Shemitic and Japhetic languages; for even when the radical words are unquestionably the same, the modifications, or inflections and combinations which form the compounds, are, for the most part, different.

As it has been made a question which of the Shemitic languages is the most ancient, and much has been written to prove it to be the Hebrew, we will state briefly our opinion on what appears to us to be one of the plainest questions in the history of nations. We have for our certain guides, in determining this question—1st, The historical narrative of facts in the Book of Genesis; and 2d, The known and uniform progress of languages, within the period of authentic profane history.

1. The Scripture informs us that before the dispersion, the whole earth was of one language and of one or the same speech; and that the descendants of Noah journeyed from the east, and settled on the plain of Shinar, or in Chaldea. The language used at that time, by the inhabitants of that plain, must then have been the oldest or the primitive language of man. This must have been the original Chaldee.

2. The Scripture informs us, that in consequence of the impious attempts of the people to build a city, and a tower whose top might reach to heaven, with a view to make themselves a name and prevent their dispersion, God interposed and confounded their language, so that they could not understand each other; in consequence of which they were dispersed "from thence over the face of all the earth."

3. If the confusion of languages at Babel originated the differences which gave rise to the various languages of the families which separated at the dispersion, then those several languages are all of equal antiquity. Of these the Hebrew, as a distinct language, was not one; for the Hebrew nation was of posterior origin.

4. All the words of the several great races of men, both in Asia and Europe, which are vernacular in their several languages, and unequivocally the same, are of equal antiquity, as they must have been derived from the common Chaldee stock which existed before the dispersion. The words common to the Syrians and Hebrews could not have been borrowed from the Hebrew; for the Hebrews originated from Heber and Abram, several centuries after Syria and Egypt were populous countries. This fact is attested by the Scripture history, which declares that when Abram migrated from Chaldea, and came into Canaan or Palestine, "the Canaanite was then in the land;" and when he returned from Egypt, "the Perizzite dwelt in the land." These declarations, and the history of Abimelech, and of the war of four kings or chieftains with five; as also of the cities of Sodom and Gomorrah, prove Syria to have been at that time well peopled. The language of the inhabitants, then, must have been coeval with the nation, and long anterior to the Hebrew as a distinct dialect. It may be added, that in the early periods of the world, when no books existed, nations, living remote or distinct, never borrowed words from each other. One nation living in the midst of another, as the Hebrews did among the Egyptians, may adopt a single word, or a few words; but a family of words thus adopted, is an occurrence rarely or never known. The borrowing of words, in modern times, is almost wholly from the use of books.

5. It is probable that some differences of language were produced by the confusion; but neither that event nor any supernatural event is necessary to account for the differences of dialect or of languages now existing. The different modern languages of the Gothic or Teutonic stock, all originated in the natural course of events; and the differences are as great between them as they are between the languages of the Shemitic stock.

6. Soon after two races of men of a common stock have separated and placed themselves in distant countries, the language of each begins to diverge from that of the other, by various means.—1. One tribe or nation will suffer one word to become obsolete and be forgotten; another, will suffer the loss of another; sometimes a whole family of words will be lost; at other times, a part only; at other times, a single word only of a numerous family will be retained by one nation, while another nation will retain the whole. 2. The same word will

be differently applied by two distant races of men, and the difference will be so great as to obscure the original affinity. 3. Words will be compounded by two nations in a different manner, the same radical words taking a different prefix or suffix, in different languages. Thus *wisdom* in English is in German *weisheit*, [wise-head, wisdom,] from *weise*, *weis*. The English *mislead* is in Danish *forlede*, from *lead*, *leder*. 4. The pronunciation and orthography of words will often be so much changed, that the same word in two languages cannot, without difficulty, be recognized as identical. No person, without a considerable attention to the changes which letters have suffered, would at once suspect or believe the English *let* and the French *laisser* to be the same word.

7. As Abram migrated from Chaldea, he must have spoken the Chaldee language; and probably, at that time, the Syrian, Arabic, and Egyptian, had not become so different, as to render it impracticable for him to converse with the inhabitants of Palestine and Egypt. But the language of Abram's descendants, and that of the land of Shinar or the Chaldee, must, in the natural course of things, have begun to diverge soon after the separation; and the changes in each language being different, would, in the course of a few centuries, form somewhat different languages. So in the days of Hezekiah, the Syrian and Hebrew had become, in a degree, distinct languages; 2 Kings xviii. In which of these languages the greatest number of alterations were produced, we do not know; but it would appear that the Chaldee dialect, in the use of dental letters instead of sibilants, is much the most general in the Celtic and Teutonic languages of Europe. Thus the German only has a sibilant in *wasser*, when the other Teutonic languages have a dental, *water*. We think also that there are far more words in the European languages which accord with the Chaldee or Arabic, than there are words which accord with the Hebrew. If this observation is well founded, the Hebrew must have suffered the loss of more primitive words than the other languages of the Shemitic family. This, however, is true, that all of them have lost some words, and in some cases the Hebrew retains what the others have lost.

8. The Hebrew Scriptures are, by many centuries, the most ancient writings extant. Hence probably the strange inference, that the Hebrew is the oldest language; as if the inhabitants of Chaldea and Syria had had no language for ages before the progenitor of the Hebrews was born.

9. The vernacular words in the Celtic and Teutonic languages of modern Europe, which are evidently the same words as still exist in the Shemitic languages, are of the same antiquity; being a part of the common language which was used on the plain of Shinar, before the dispersion.

The descendants of Japheth peopled the northern part of Asia, and all Europe; or if some colonies from Egypt planted themselves in Greece at an early period, they or their descendants must have been merged in the mass of Japhetic population. Certain it is that the Greek language is chiefly formed on the same radical words as the Celtic and Teutonic languages.

The Japhetic tribes of men, whose descendants peopled the south and west of Europe, were first established in the country now called Persia, or, by the natives themselves, Iran. Of this fact, the evidence now existing is decisive. The numerous words found in the Greek, Latin, Gaelic, English, and the kindred tongues, which are still used in Persia, prove, beyond all question, that Persia must have been the residence of the people whose descendants introduced into Europe the languages from which the modern languages are derived. The fact proves further, that a great body of the original Persians remained in their own country, and their descendants constitute the mass of the population at this day.

In the early stages of society, men dwelt or migrated in families, tribes, or clans. The family of Abraham and Jacob in Asia, and the clans of the Gaels in Scotland, exhibit to us the manner in which societies and nations were originally formed. The descendants of a man settled around him, and formed a clan, or tribe, of which the government was patriarchal. Such families often migrated in a body, and often the personal characteristics of the progenitor might be distinctly traced in his descendants for many generations. In process of time, some of these families became nations; more generally,

## INTRODUCTION.

by means of wars and migrations, different tribes became blended, and the distinction of families was lost.

In rude ages, the families or tribes of men are named from some characteristic of the people; or, more generally, from the place of their residence. The Greeks gave the name of *Srythia* to the north of Europe and Asia, but the primitive inhabitants of the west of Europe they called *Keltæ*, *Kelts*, *Celts*, a word signifying *woods men*.\* These were descendants from the same ancestors as the Greeks and Romans themselves, but they had pushed their migrations into Gaul, Spain and Britain. The first settlers or occupiers of these countries were driven forward by successive hordes, until they were checked by the ocean; there they made their stand, and there we find their descendants at this day. These may be considered as the descendants of the earliest settlers or first inhabitants of the countries where they are found. Among these are the inhabitants of France, south of the Garonne, and those of the north of Spain, called by the Romans Aquitani and Cantabri, in more modern times Gascoigns, Basques, and Cantabrians, who still retain their native language; and in Great Britain, the Gaels in Scotland, and the natives of the north and west of Ireland, who also retain their primitive language.†

The first inhabitants of the north and west of Europe, known to the Greeks and Romans, to whom we are indebted for our earliest accounts of that region, were the Cimbrî, who inhabited the peninsula of Denmark, now called Jutland, and the tribes which belonged to the Teutonic and Gothic races which were established in Germany and on both sides of the Baltic. Whether tribes of Celtic origin had overspread the latter countries before the arrival of the Gothic and Teutonic races, and all Europe had been inhabited by the Celts even to the borders of Sarmatia, has been a question much disputed by historians and antiquaries. The German and French writers generally contend that the Celts inhabited all the north of Europe, as far at least as Sarmatia; but some respectable English writers are of a different opinion. Now it is agreed that the Welsh are descendants of the Cimbrî, inhabitants of Jutland; and their language bears a strong affinity to the Celtic languages which still exist; a fact that countenances the opinion of the German and French writers. But the dispute is of little moment: the Celtic, Teutonic and Gothic races being all of the Japhetic stock, migrating from Asia through Asia Minor at different times, and pursuing different courses westward. The first tribes probably sought the warm climates along the north coast of the Mediterranean, and established themselves in Greece and Italy. Others followed the course of the Danube and its subsidiary streams, till they fell upon the rivers that conducted them to the Baltic. The first inhabitants of Greece and Italy were probably of the Celtic race; but if they were, it is very evident that tribes of the Teutonic or Gothic races invaded those countries before they were civilized, and intermingled with the original inhabitants. The Pelasgi may have

been among the number. This is an inference which we draw from the affinities of the Greek and Latin languages with those of Teutonic origin. The Teutonic and Gothic races impressed their language upon all the continent of Europe west of the Vistula, and from that river to the Rhine, or rather to the Seine, anterior to the conquest of Gaul by Julius Cæsar. The same races invading and conquering the south of Europe, in the fourth and fifth centuries, on the downfall of the Roman empire, infused a portion of their language into the Italian and Spanish, which is still distinguishable.

The ancient Sarmatia, including Poland and Russia, was probably peopled originally by races of men who passed into Europe by the country north of the Euxine. Their original residence was along the rivers Kur and Araxes, or on the mountains between the Euxine and Caspian. The name of the *Russ* or Russians is clearly recognized in the *Roxolani* of Pliny and Ptolemy, and possibly the ancestors of this race may have entered Europe by Asia Minor. That the Teutonic races, originally from Persia, inhabited Asia Minor, and migrated westward by that course, is evident from the names which they impressed on mountains, rivers and places. Such are the *Cragus* of Pliny, the Welsh and English *crag*;‡ *Perga* in Pamphylia, now *burg* or *bergen*; *Thymbreck*, the name of a small stream, near the site of Troy; a word in which we recognize the English *brook*; it was contracted by the Greeks into *Thymbrivæ*.§

It is admitted by all gentlemen acquainted with oriental literature, that the Sanscrit, or ancient language of India, the parent of all the dialects of that great peninsula, is radically the same language or from the same stock as the Greek and Latin; the affinities between them being remarkably clear and decisive. If so, the inhabitants of India and the descendants of the Celtic and Teutonic nations are all of one family, and must have all migrated from one country after the separation of the nations of the Shemitic stock from those of the Japhetic race.||

Whether that country was Persia, or Cashmir, or a country further east, is a point not easily determined. One important inference results from this fact, that the white men of Europe and the black or tawny men of India, are direct descendants from a common ancestor.

Of the languages of Europe, the Greek was first improved and refined, and next to that the Latin. The affinity between these languages and those of the west and north of Europe is very striking, and demonstrates their common origin. It is probable, however, that there are some words in the Greek derived from Africa, if Egyptian colonies were established in Greece, as historians inform us.

The modern Italian, Spanish, French and Portuguese, are composed chiefly of Latin words, much altered, however, both in orthography and inflections. Perhaps nine tenths of all the words now found in those languages are of Latin origin; being introduced by the Romans, who held Gaul in subjection five or six centuries, and Spain much longer; or being borrowed from Latin authors, since the revival of letters. All these languages, however, retain many words of Celtic origin; the primitive language not having been entirely extirpated. In some instances, the same word has been transmitted through both channels, the Celtic and the Latin, and is yet retained. Thus in French *céder*, and in Italian *cedere*, is directly from the Latin *cedo*; while the French *congédier*, and Italian *congedare*, are composed of the same word, with a prefix, derived from the Celtic, and retained in the Welsh *gadaw*, to quit, to leave, [*I concede*.] And this same verb probably appears also in *quit*, a word common to the Teutonic and to the Celtic languages. See *Conge* in the Dictionary.

It must be observed further, that the Spanish language contains some words of African origin, introduced by the Carthaginians before the Roman conquest of Spain, or afterward by the Moors, who for several centuries were masters of that country. It contains also some words of Gothic origin, intro-

\* Welsh *celt*, a cover or shelter, a *celt*; *celtind*, an inhabitant of the covert or wood; *celu*, to conceal, Lat. *celo*. In Gaelic the word is *coill* or *ceill*. The Celts were originally a tribe or nation inhabiting the north of Italy, or the still more northern territory.

† We purposely omit all consideration of the different families, tribes or nations which first peopled Greece and Italy. In Greece, we read of the *Pelasgi* or *Pelagæ*, the Hellenes, the Achæans, the Dorians, the Æolians, the Ionians, the Pelasgi, &c. In Italy, of the Illyrians, the Laburni, the Siculi, the Veneti or Heneti, the Iberi, Lagures, Sicani, Etrusci, Insubres, Sabini, Latini, Samnites, and many others. But as these nations or their descendants gave the name of *Celts* to the Umbri, or nations that dwelt in the north, in the less cultivated parts of Europe, and to the inhabitants of Gaul; and as all the tribes, under whatever denomination they were known, were branches of the great Japhetic stock, we shall call them by that general name, *Celts*; and under the general name of Goths or Teutons, shall comprehend the various tribes that inhabited the north of Germany, and the country north of the Baltic or Scandinavia.

A late writer seems to consider the Teutonic races as the only ancestors of the Greeks and Romans. But from Celtic words still found in the Greek and Latin words not belonging to any of the Gothic or Teutonic languages, it is demonstrably certain that the primitive settlers in Greece and Italy belonged to the Celtic races. Thus the Greek *βραχίον*, Lat. *brachium*, the arm, is formed on the Gaelic *braigh*, *raig*, W. *braig*, a word not found among the Teutonic nations. So the Welsh *iochiaw*, to mock, is found in the Greek *μαωω*, and French *moquer*, to mock, and Ir. *moqdah*, a mocking; but not in any of the Gothic or Teutonic languages. Many similar facts prove that the Celtic races were among the earliest inhabitants of Greece.

‡ Plin. H. N. lib. 5. cap. 27. Strabo, lib. 7. 6. informs us that the Dalmatians had the singular practice of making a division of their fields every eighth year. Hence perhaps the name, from *deal*, and *math* or *madh*, country.

## INTRODUCTION.

duced by the Goths who conquered that country, at the downfall of the Roman Empire. The French also contains some words of Teutonic origin, either from the Belgic tribes who occupied the country to the Seine at the time of Cesar's invasion, or from the Franks who established the dynasty of the Merovingian kings in the fifth century, or from the Normans who obtained possession of the northern part of that kingdom in the tenth century, or from all these sources.

The German, Dutch or Belgic, Anglo-Saxon, Danish and Swedish languages, are of Teutonic or Gothic origin.\* They are all closely allied; a great part of the words in them all being the same or from the same roots, with different prefixes or affixes. There is, however, a greater difference between the Danish and Swedish, which are of the Gothic stock, and the German and Dutch, which are of Teutonic origin, than between two languages of the same stock, as between the Danish and Swedish. The Norwegian, Icelandic, and some of the languages or dialects of Switzerland, belong to the same stock.

The basque or Cantabrian in Spain; the Gaelic in the north of Scotland, and the Hiberno-Celtic or native language of Ireland, are the purest remains of the ancient Celtic. From a comparison of a vocabulary of the Gaelic and Hiberno-Celtic, we find little or no difference between them; and from a long and attentive examination of this language, and of the languages of Teutonic origin, we find less difference between them than most authors have supposed to exist.

The Armoric or language of Brittany in the northwest angle of France, and the Cornish, in the southwest of England, are also of Celtic origin. The Cornish is now extinct; but the Armoric is a living language.

The English, as now spoken, is a language composed of words from several others. The basis of the language is Anglo-Saxon, or, as we shall, for the sake of brevity, call it, Saxon, by which it is closely allied to the languages of Teutonic and Gothic origin on the continent. But it retains a great number of words from the ancient languages of Britain, the Belgic or Iloegrian, and the Cymraeg or Welsh, particularly from the latter, and some from the Cornish. Cesar informs us, that before he invaded Britain, Belgic colonies had occupied the southern coast of England; and the inhabitants of the interior, northern and western parts, were the ancestors of the present Welsh, who call themselves *Cymry*, and their country *Cymru*, a name which indicates their origin from the Cimbr, inhabitants of the modern Denmark, or Cimbric Chersonese, now Jutland.

The modern Welsh contains many Latin words introduced by the Romans, who had possession of Britain for five hundred years. But the body of the language is probably their vernacular tongue. It is more nearly allied to the languages of Celtic origin, than to those of the Teutonic and Gothic stock; and of this British language, the Cornish and Armoric are dialects.

It has been commonly supposed that the Britons were nearly exterminated by the Saxons, and that the few that survived, escaped into the west of England, now Wales. It is true that many took refuge in Wales, which their descendants still retain; but it cannot be true that the other parts of England were entirely depopulated. On the other hand, great numbers must have escaped slaughter, and been intermixed with their Saxon conquerors. The Welsh words, which now form no unimportant part of the English language, afford decisive evidence of this fact. It is probable, however, that these words were for a long time used only by the common people, for few of them appear in the early Saxon writers.

The English contains also many words introduced by the Danes, who were for some time masters of England; which words are not found in the Saxon. These words prevail most in the northern counties of England; but many of them are incorporated into the body of the language.

After the Conquest, the Norman kings endeavoured to extirpate the English language, and substitute the Norman. For this purpose, it was ordained that all law proceedings and records should be in the Norman language; and hence the early records and reports of law cases came to be written in Norman.

But neither royal authority, nor the influence of courts, could change the vernacular language. After an experiment of three hundred years, the law was repealed; and since that period, the English has been, for the most part, the official, as well as the common language of the nation. A few Norman words, however, remain in the English; most of them in law language.

Since the Conquest, the English has not suffered any shock from the intermixture of conquerors with the natives of England; but the language has undergone great alterations, by the disuse of a large portion of Saxon words, and the introduction of words from the Latin and Greek languages, with some French, Italian, and Spanish words. These words have, in some instances, been borrowed by authors directly from the Latin and Greek; but most of the Latin words have been received through the medium of the French and Italian. For terms in the sciences, authors have generally resorted to the Greek; and from this source, as discoveries in science demand new terms, the vocabulary of the English language is receiving continual augmentation. We have also a few words from the German and Swedish, mostly terms in mineralogy; and commerce has introduced new commodities of foreign growth or manufacture, with their foreign names, which now make a part of our language.—Such are *camphor*, *amber*, *arsenic*, and many others.

The English then is composed of,

1st, Saxon and Danish words of Teutonic and Gothic origin.  
2nd, British or Welsh, Cornish and Armoric, which may be considered as of Celtic origin.

3rd, Norman, a mixture of French and Gothic.

4th, Latin, a language formed on the Celtic and Teutonic.

5th, French, chiefly Latin corrupted, but with a mixture of Celtic.

6th, Greek, formed on the Celtic and Teutonic, with some Coptic.

7th, A few words directly from the Italian, Spanish, German, and other languages of the continent.

8th, A few foreign words, introduced by commerce, or by political and literary intercourse.

Of these, the Saxon words constitute our mother tongue; being words which our ancestors brought with them from Asia. The Danish and Welsh also are primitive words, and may be considered as a part of our vernacular language. They are of equal antiquity with the Chaldee and Syriac.

### AFFINITY OF LANGUAGES.

On comparing the structure of the different languages of the Shemitic and Japhetic stocks, we cannot but be struck with the fact, that although a great number of words consisting of the same or of cognate letters, and conveying the same ideas, are found in them all; yet in the inflections, and in the manner of forming compounds and derivatives, there are remarkable differences between the two great families. In the modifications of the verb, for expressing person, time, and mode or mood, very little resemblance is observable between them. If we could prove that the personal terminations of the verb, in the Japhetic languages, were originally pronouns, expressive of the persons, we should prove an affinity between the words of the two races in a most important particular. Some attempts of this kind have been made, but not with very satisfactory results.†

In the formation of nouns, we recognize a resemblance between the English termination *th*, in *birth*, *truth*, *drough*, [Saxon *drugoth*,] *warmth*, &c., and the Shemitic terminations *ו* and *ת*; and the old plural termination *en*, retained in *oren*, and the Welsh plural ending *ion*, coincide nearly with the

Arabic termination of the dual number *ان* *an*, and the regular masculine plural termination *ون* *on*, as well as with the Chaldee, Hebrew, and Syriac *ין* *in*. And it is justly remarked by Mitford, that in the variety of plural terminations of nouns, there is a striking resemblance between the Arabic and the Welsh. There is one instance, in the modern lan-

\* In strictness, the Swedish and Danish are of Gothic origin, and the German and Saxon, of Teutonic origin.

† According to Dr. Edwards, there is a remarkable resemblance between the Shemitic languages and the Muhhekanew, or Mohegan, one of the native languages of New England, in the use of the pronouns as prefixes and affixes to verbs.—*Observations*, &c. p. 13.

## INTRODUCTION.

guages of Teutonic origin, in which we find the Arabic nunnation:—this is the German and Dutch *binnen*, the Saxon *binnan* or *binnon*, signifying *within*, Hebrew and Chaldee בִּין,

Ar. بَيْن *bin*, without the mark of nunnation when it signifies *within*; but when it signifies separation, space, interval, the

original sense, it is written بَيْن, and pronounced, with the nunnation, like the Teutonic word *binnon*.

One mode of forming nouns from verbs in the Shemitic languages is by prefixing *m*. We know of no instance of this manner of formation in the Japhetic languages, except in some names which are of oriental origin. Mars is said to be from *amens*, but if so, the word was undoubtedly formed in the East. So we find *Morpheus*, the god of sleep, to be probably formed

with the prefix *m*, from the Ethiopic ለዐርፋ *aorፋ*, to rest, to fall asleep; whence we infer that *Morpheus* is sleep deified.\*

But as many words in all the languages of Europe and Asia are formed with prepositions, perhaps it may be found on examination, that some of these prefixes may be common to the families of both stocks, the Japhetic and the Shemitic. We find in German *gemüth*, in Dutch *gemoed*, from *muth*, word, mind, mood. We find *mad* in Saxon is *gemaad*; *polish*, the Latin *polio*, is in Welsh *caboli*; *mail* in Italian is both *maglia* and *camaglia*; *belief* in Saxon is *geleaf*, and in German *glaub*. We find that in the Shemitic languages מלא signifies

to fill or be full, and we find in the Arabic كَمَل *kamala*, has the same signification. In Syriac, ܕܐܓܠ *gal*, signifies to remove; and ܕܐܕܠ *kagal*, signifies to wander in mind, to

be delirious. In Chaldee and Syriac, ܕܐܕܠ is to wonder, precisely the Latin *demiror*, which is a compound of *de* and *miror*.

We find also that nations differ in the orthography of some initial sounds, where the words are the same. Thus the Spanish has *llamar*, *llorar*, for the Latin *clamo*, *ploro*; and the Welsh has *llavr*, for the English *floor*, *llabi*, a tall, lank person, coinciding with *flabby*, *llac* for *slack*, and the like.

As the prepositions and prefixes, in all languages, constitute an important class of words, being used in composition to vary the sense of other parts of speech, to an almost unlimited extent, it may be useful to give them a particular consideration.

The simple prepositions are, for the most part, verbs or participles, or derived from them; when verbs, they are the radical or primary word, sometimes varied in orthography by the addition or alteration of a single vowel, or perhaps, in some cases, by the loss of the initial consonant, or aspirate. Such are the Greek *para*, *para*, *para*; the Latin *con* and *per*; the English *for*, which retain their original consonants. The following, *of*, *by*, *in*, *on*, *un*; the Latin *ab*, *ad*, *pro*, *pra*, *re*; the Greek *apo*, *apo*, *apo*, may have lost the initial or final consonants; *of* for *hof*; *in* for *hin*; *ab* for *hab*; *pro* for *prod*. In some words this loss can only be conjectured; in others, it is known or obvious. Thus the English *by* and *be* was originally *big*, as it is in the Saxon, and the Latin *re* is written also *red*, evidently a derivative of an Arabic verb still existing; the Latin *sub* and *super* are formed probably from the Greek *hupo*, *hupo*, by the change of an aspirate into *s*, or the Greek words have lost that letter. The English *but* in the phrase "They are all here *but* one," is a participle; the Saxon *butan*, or *buton*; Dutch *buiten*, from *buiten*, to rove. Among is the Saxon *gemang* the verb, or the participle of *gemengan*, to mingle.

In general, the primary sense of the preposition is moving, or moved. Thus *to* in English, and *ad* in Latin, primarily denote advancing toward a place or object; as in the sentence, "We are going *to* town." *From*, *of*, Lat. *ab*, Gr. *apo*, denote motion from a place or object. The French *près*, is from the

Italian *presso*, and this is the Latin participle *pressus*, pressed; hence it denotes *near*, *close*.

In some instances prepositions are compounds, as the English *before*; that is, *be* or *by fore*, by the front; and the Fr. *auprès*, at or near.

Prepositions, from their frequent use and from the ease with which their primary signification is modified to express differences of position, motion, or relation, as occasions demand, have, in many instances, a great variety of applications; not, indeed, as many as lexicographers sometimes assign to them, but several different, and sometimes opposite significations; as, for examples, the English *for*, *with*; the Latin *con*, and the Greek *para*. *For*, which is from the root of the Saxon *faran*, Gr. *φωρεωμαι*, to pass, denotes *toward*, as in the phrase, "A ship bound *for* Jamaica;" or it denotes *in favour of*, as "This measure is *for* the public benefit;" or "The present is *for* a friend." But it denotes also opposition or negation, as in *forbear*, *forgive*, *forbid*.

*With* is a verb, but has rather the sense of a participle. It is found in the Gothic with a prefix, *ga-withan*, to join or unite. Its primary sense then is joined, close; hence, in company; as in the sentences—"Go *with* him," "Come *with* me." It has the sense also of *from*, *against*, *contrariety*, *opposition*, as in *withdraw*, *withstand*, *without*. In Saxon it had also the sense of *toward*, as "*with eorðan*," toward the earth; also of *for*, denoting substitution or equivalent in exchange, as "*sylan with dagas weorce*," to give *for* a day's work; also of *opposite*, *over against*, as "*with the se*," opposite the sea.

*Con* in Latin generally signifies *with*, *toward*, or *to*, denoting closeness or union, approach, joint operation and the like, as in *concurro*, *conjungo*, *congregor*; but it has also the sense of *against* or *opposition*, as in *contendo*.

The Greek *para* is doubtless from the root of the English *fare*, Saxon *faran*, to go, to pass. It signifies *from*, that is, departure—also *at*, *to*, Lat. *ad*; *near*, *with*, *beyond*, and *against*.

To understand the cause of the different and apparently contrary significations, we are to attend to the primary sense. The effect of passing to a place is nearness, *at*, *presso*, *près*, and this may be expressed by the participle, or, in a contracted form, by the verb. The act of passing or moving toward a place, readily gives the sense of such prepositions as *to*, and the Latin *ad*, and this advance may be in favour or for the benefit of a person or thing, the primary sense of which may perhaps be best expressed by *toward*; "A present or a measure is *toward* him." But when the advance of one thing toward another is in enmity or opposition, we express the sense by *against*, and this sense is especially expressed when the motion or approach is in front of a person, or intended to meet or counteract another motion. Hence the same word is often used to express both senses; the context determining which signification is intended. Thus *for* in English, in the sentence, "He that is not *for* us is against us," denotes *in favour of*. But in the phrase, "*for* all that," it denotes opposition. "It rains, but *for* all that, we will take a ride," that is, in opposition to that, or notwithstanding the rain, we will ride.

The Greek *para*, among other senses, signifies beyond, that is, past, and *over*, Hebrew עֲבַר.

The prepositions which are used as distinct words, are called separable prepositions, or more generally *prepositions*:—those which are used only in composition are called inseparable prepositions. For the sake of brevity, we give to all words or single letters, prefixed to other words in composition, the general name of *prefixes*.

One of the best modes of ascertaining the true sense of a preposition, is, to examine its various uses in composition, and discover what effect it has in modifying the signification of the word to which it is prefixed.

Prepositions, used in compounds, often suffer the loss or change of a letter, for the sake of euphony, or the ease of pronunciation. Thus *ad* in Latin becomes *f* in *affero*; *con* becomes *col* in *colligo*; the Greek *para* loses a letter in *paraui*, as does *apo* in many words.

The following sketch of the principal prepositions and prefixes in several languages of Europe, will exhibit some of the affinities of these languages, and, in a degree, illustrate the uses of this class of words.

## INTRODUCTION.

### SAXON AND GOTHIC.

*And*, Saxon and Gothic, signifies *against, opposite*. This is the Greek *anti*, and Latin *ante*, not borrowed from the Greek or Latin, but a native word. Examples, *andstandan*, to stand against, to resist; *andscarian*, *anscarian*, to answer; that is, to speak again, against, or in return.

*Amb*, *emb*, *ymb*, usually *emb*, Saxon, signifying *about, around*; coinciding with the Latin *amb*, and Greek *amphi*. Example, *emb-faran*, to go around, to walk about; *embutan*, about; *emb*, about; and *butan*, without. See *But*. *Ambekt*, *embekt*, *ymbekt*, office, duty; whence we have *ambassador*. This in Gothic is *andbahtei*; and a bailiff, minister, or servant, is *andbahts*. The Germans have the word contracted in *amt*, charge, office, Dutch *ampt*, Danish *amt*. The Gothic orthography gives rise to the question whether *amb*, *emb*, and *ymb*, Saxon and Gothic *and*, are not radically the same word; and it is very certain that the Gothic and Saxon *and*, is radically the same word as the Latin *in*, Danish *ind*. So in Gothic, "*and wigans*," in the ways, into the highways; Luke xiv. 23; "*and haimos*," per vias, through the towns; Luke ix. 6.

This preposition, *amb*, is in Dutch *om*; in German *um*; in Swedish and Danish *om*.

*At*, is a Gothic preposition and prefix, coinciding with English *at*, Latin *ad*.

*Be*, in Saxon, as a preposition and prefix, is always written *be*, or *big*, answering to the English *by*, a preposition, and *be* in *beseit*. In Gothic, it is written *bi*, *by* and *be*, being contractions of *big*. The primary and principal signification is *near, close*; as "Stand or sit *by* me." So in the word *bystander*. It is a prefix of extensive use in the Saxon, German, Dutch, Danish, and Swedish. Its use in denoting instrumentality, may be from the sense of *nearness*, but more probably it is from *passing*, like *per*, through, or it denotes *proceeding from*, like *of*, as "Salvation is *of* the Lord."

*For*, in Saxon, as in English, is a preposition and prefix of extensive use. In Saxon *for* signifies a going, from *faran*, to go, to fare. It is radically the same word as *fore*, in the sense of *in front, before*. Its primary sense is *advancing*; hence *moving toward*; hence the sense of *in favour of*, and that of opposition, or negation. See the preceding remarks.

This word in German is *für*, but with this orthography, the word is little used in composition. Yet the German has *fürbitte*, intercession or praying *for*; *fürwort*, intercession, recommendation, and a pronoun [*for-word*:] and *für-wahr*, forsooth.

In the sense of *for*, the German has *vor*, a word of extensive use as a prefix. Thus in Saxon *forescan* to foresee, is in German *vorsehen*. The identity of these words will not be questioned. But in German as in Dutch the preposition *ver*, which is the English *for*, and Saxon *for*, is used in composition, in words in which the Saxon and English have *for*. Thus *for-gifun*, to forgive, is in German *vergeben*, and in Dutch *vergeven*—Saxon, *forgitan*, to forget; German *vergessen*; Dutch *vergeten*. Hence we see that the Saxon *for*, *fore*, *fyr*, the English *for*, *fore*, *far*, and the German *für*, *vor*, and *ver*, are from the same radix.

In Dutch, *for* and *fore* are represented by *voor*, and *ver* represents *for* and *far*.

The Danish also unites *for* and *fore*, as does the Swedish.

The French has this word in *pour*, and the Spanish and Portuguese in *por*. The latter signifies not only *for*, but *through*, as in Portuguese, "Eu passarei *por* França," I will pass *through* France. Here we see the sense of moving. In Spanish and Portuguese this word is written also *para*, as if from the Greek. It is evidently the same word, probably received through a different channel from that of *por*. Now *through* is the exact sense of the Latin *per*; and *per* is the Italian preposition answering to *for* and *por*. But, what is more to the purpose, the Spanish, Italian, and Portuguese word, equivalent to the English *forgive*, is in Spanish *perdonar*; in Italian *perdonare*, and in Portuguese *perdoar*; and the French is *pardonnee*. Here then we have strong, if not conclusive evidence, that *for*, *pour*, *por*, *per*, *par*, and *para*, in different languages, are all from one stock, the word being varied in dialect, or by the different families; just as we have *far*, as well as the Saxon *fyr*, and the English *forth, further*,

from the same primitive word. We have the same word in *pursue* and *purchase*, from the French *pour*.

The Greek has *παρα*, and *προς*, probably from the same root, as well as *προσβουλις*, *προς*.

*Ge*, in Gothic, which is *ge* in Saxon, is a prefix of very extensive use. In Saxon, it is prefixed to a large portion of all the verbs in the language. According to Iye, it has sometimes the sense of the Latin *cum*; but in most words we cannot discern any effect of this prefix on the signification of the simple verb. It is retained in the Danish and in some German and Dutch words, especially in the participles of verbs, and in nouns formed from them. But it is remarkable that although the Saxon is our mother tongue, we have not remaining in the language a single instance of this prefix, with the original orthography. The only remains of it are in the contraction *a*, as in *awake*, *adrift*, *ashamed*, &c. from *gewecan*, *awecan*; *gedrifan*, *adrifan*; *gesceamian*, *ascamian*. The letter *y* prefixed to verbs and participles used by Chaucer, as *yberied*, *yblent*, *ybore*, *ydelight*, and a few others, is the remnant of the *ge*. The words *yelad*, and *yelepeld*, are the last English words used in which this letter appears.

It is possible that the first syllable of *govern*, from Latin *guberno*, Greek *κυβερναω*, may be the same prefix; or it may be the Welsh prefix *gu*, which occurs in *gubern*, to work, which the Romans wrote *operator*. But we know not whether the first syllable of *govern* is a prefix or not.

There is another word which retains this prefix corrupted, or its equivalent; this is *common*, which we have received from the Latin *communis*. This word in the Teutonic dialects is, Saxon *gemene*; German *gemein*; Dutch *gemeen*; Danish *gemeen*; Swedish *gemen*. Now if this is the Latin *communis*, and of the identity of the last component part of the word, there can, we think, be no doubt; then the first part of the word is the Teutonic *ge* altered to *com*, or, what is more probable, *com* is the equivalent of *ge*, or *ge* may be a contracted and corrupted form of *cum*, *com*. In either case, we arrive at the conclusion that the Teutonic *ge*, and the Latin *cum*, are equivalent in signification.

*In*, is used in the Saxon and Gothic, as in modern English. It is in German *in*, Dutch and Swedish *in*, Danish *ind*, Greek *en*, Latin *in*, French *en*. This is radically the same word as *on* and *un*, the German *an*, Dutch *aan*, and Welsh *an*. In its original sense, it implies moving, advancing toward, and hence its use as a particle of negation or contrariety. "Eant *in* urbem," They are going to the city. "Hæc audio *in* te dici," I hear these things said against you. In modern military usage, *on* is used in the same sense of advancing: "The army is marching *on* Liege."

*Mid*, in Saxon, signifies *with*. It is the Gothic *mit*, German *mit*, Dutch *mede* or *met*, and the Greek *μετα*; but not retained in English. It seems to have the same origin as *mid*, *middle*, *amidst*. In the Gothic it is used as a prefix.

*Miss*, a prefix, is the verb *miss*, to deviate. It is used in Saxon, German, Dutch, Swedish and Danish, in nearly the same sense as in English. Its radical sense is to depart or wander.

*Of*, is a preposition and prefix of extensive use in the Saxon, as in English. It denotes primarily, issuing, or proceeding from; hence separation, departure, and distance: in the latter sense, it is written *off*. It is the Latin *ab*, written by the early Romans *af*; the Greek *απο*, the German *ab*, the Dutch *af*; Danish and Swedish *af*. The Saxons often prefixed this word in cases where we use it after the verb as a modifier; as *of-drifan*, to drive off; as it is still used by the Germans, Dutch, Swedes and Danes. We retain it as a prefix, in *offset* and *off-spring*, Saxon *of-spring*. As it denotes *proceeding from*, it is the proper sign of the genitive case; the case expressing production.

*Over*, English *over*, Gothic *ufar*, German *über*, Dutch *over*, Danish *over*, Swedish *öfver*, is a preposition and prefix, in all the Teutonic and Gothic languages which we have examined; and in the same or similar senses. This seems to be the Greek *υπερ*, from which the Latins formed *super*, by converting the aspirate of the Greek vowel into *s*. This is probably the Heb. Ch. Syr. Ar. *עבר*, to pass, a passing, beyond.

*On*, is a Saxon preposition and prefix of very extensive use. It is obviously a different orthography of *in*, and it is used for

## INTRODUCTION.

in the Saxon, as "*on onginu*," in the beginning. It has also the sense we now give to *on* and *upon*, with other modifications of signification.

In composition, *on* signifies *into*, or *toward*, as *on-blawan*, to blow in; *onclifian*, to adhere, to cleave to; and it is also a particle of negation, like *un*, as *onbindan*, to unbind. This *on* is only a different spelling of *un*, in Dutch *on*, German *un*, used as a word of negation. The Gothic has *un* and *und*, in the like sense, as the Danish has *un*; the Dutch *ont*. In this sense, *un* answers precisely to the Greek *avri*, and as this is sometimes written *und* in Gothic, as *in* is written *ind* in Danish, there can be little doubt that *in*, *on*, *un*, *avri*, are all from one stock. The original word may have been *han*, *hin*, or *hon*; such loss of the first letter is very common; and *inn*, from the Ch. and Heb. *inn*, presents us with an example. See *In* and *Lin* in the Dictionary.

The German has *an*, and the Dutch *aan*, in the sense of *in* and *on*.

*Oth*, is a Saxon preposition and prefix, sometimes written *ath* and *ot*, and answering nearly to the Latin *ad* and *re*; as in *oth-witan*, contracted, to twit, to throw in the teeth. It has also the sense of *from*, or *away*, or *against*, as in *othsaccian*, to abjure. This preposition is obsolete, but we have the remains of it in *twit*, and perhaps in a few other words.

*Sam*, *samod*, a prefix. See the Danish and Swedish *infra*.

*To*, is a preposition and prefix of extensive use in our mother tongue. It occurs as a prefix in such words as, *to-breccan*, to break; *to-heran*, to bring or bear [*ad-ferre*]. We retain it in *together*, Saxon *togethere*; and in *toward*, Saxon *toward*, *to-wearde*; and in *tomorrow*, *today*, *tonight*. The Dutch write it *toe*, and the Germans *zu*, and both nations use it extensively as a prefix. In Gothic it is written *du*, as in *du-ginnan*, to gin, that is, to begin. It would be gratifying to learn whether the Ethiopic *T*, which is prefixed to many verbs, is not the

remains of the same preposition.

*Un*, is a Saxon prefix of extensive use, as a privative or particle of negation. See *On* and *Lin*.

*Under*, is a Saxon preposition and prefix of considerable use, in the present English sense. The Germans write it *unter*, and the Dutch *onder*, and use it in like manner. The Danes and Swedes write it *vnder*, and use it in the same sense.

*Up*, *uppe*, is a Saxon preposition and prefix of considerable use, in the present English sense. The Gothic has *uf*, in the sense of the Latin *sub*. The Germans write it *auf* and the Dutch *op*, the Danes *op*, and the Swedes *op*, and all use it as a prefix.

*Us*, in Gothic, is a preposition and prefix. This is the German *aus*, and equivalent to the Latin *ex*. It is the Saxon *ut*, the English *out*, Dutch *ut*, Swedish *ut*, and Danish *ud*, dialectically varied. To this answers the Welsh *ys*, used in composition, but *ys* seems rather to be a change of the Latin *ex*, for the Latin *expello* is written in Welsh *yspeliar*, and *extendo* is *estlyn*.

*Wither*, in Saxon, from the root of *with*, denotes *against*, or *opposition*. It is a prefix in Saxon, written in German *vider*, in Dutch *weder*; Danish and Swedish *reder*. It is obsolete, but retained in the old law term *withernam*, a counter-taking or distress.

In the German language, there are some prepositions and prefixes not found in the Saxon; as,

*Ent*, denoting from, out, away.

*Er*, without, out or to. Danish *er*.

*Nach*, properly *nigh*, as in *nachbar*, neighbour; but its most common signification in composition is *after*; as in *nachgehen*, to go after. This sense is easily deducible from its primary sense, which is close, near, from urging, pressing, or following. In Dutch, this word is contracted to *na*, as in *nabuur*, neighbour; *nagaan*, to follow. The Russ has *na* also, a prefix of extensive use, and probably the same word. This fact suggests the question, whether the ancestors of these great families of men had not their residence in the same or an adjoining territory. It deserves also to be considered whether this *na*, is not the Shemitic *נ*, occurring as a prefix to verbs.

*Weg*, is a prefix used in the German and Dutch. It is the

Saxon, German, and Dutch *weg*, *way*; in the sense of *away*, or passing from, from the verb, in Saxon *wegyan*, *wegyan*, to carry, to weigh, English to *wag*, the sense of which is to move or pass; as German *wegfallen*, to fall off or away.

*Zer*, in German, denotes separation.

In the Gothic dialects, Danish and Swedish, *fra* is used as a prefix. This is the Scottish *fra* or *frac*, English *from*, of which it may be a contraction.

*Fram* in Swedish, and *frem* in Danish, is also a prefix. The primary sense is to go, or proceed, and hence it denotes moving to or toward, forth, &c. as in Danish, *fremforer*, to bring forth; *fremkalder*, to call for. But in Danish, *fremmed* is strange, foreign, and it is probable that the English *from* is from the same root, with a different application. It may be from the same stock as the Gothic *fram*, origin, beginning, Latin *primus*, signifying to shoot forth, to extend, to pass along.

*Gien*, *igen*, in Danish, and *igen*, in Swedish, is the English *gain* in *again*, *against*. This is a prefix in both these Gothic languages. It has the sense of the Latin *re*, as in *igienkommer*, to come back, to return; of *against*, as in *igienkalder*, to countermand, or recall; of *again*, as *gienbinder*, to bind again. This may be the Latin *con*.

*Mod*, in Danish, and *mot*, *emot*, in Swedish, is a preposition, signifying *to*, *toward*, *against*, *contrary*, *for*, *by*, *upon*, *out*, &c.; as "*mod staden*," toward the city; *modstrider*, to resist; *modgift*, an antidote: *motbör*, a contrary wind; *modvind*, the same. This is the English *meet*, in the Gothic orthography, *moljan*, to meet, whence to *moot*.

*O*, in Swedish, is a negative or privative prefix, as in *otidig*, immature, in English, *not tidy*. It is probably a contracted word.

*Paa*, in Danish, *pa* in Swedish, is a preposition and prefix, signifying *on*, *in*, *upon*. Whether this is allied to *be*, *by*, and the Russ *po*, we shall not undertake to determine with confidence; but it probably is the same, or from the same source.

*Samman*, signifying together, and from the root of *assemble*, is a prefix of considerable use in both languages. It answers to the Saxon *sam*, *samod*, equivalent to the Latin *con* or *cum*. It seems to be allied to *same* and the Latin *similis*.

*Til*, both in Danish and Swedish, is a prefix, and in Danish, of very extensive use. It is equivalent to the English *to* or *toward*, and signifies also *at*, *in*, *on*, *by*, and *about*, and in composition often has the sense of *back* or *re*, as in *tilbage*, backward, that is, *to back*; but generally it retains the sense of *to* or *onward*; as in *tilbyder*, to offer, that is, to speak or order to; *tildriver*, to drive on; *tilgirer*, to allow, to pardon, that is, to give to, and hence to give back, to remit. This is the English *till*, which we use in the same sense as the Danes, but in English it always refers to *time*, whereas in Danish and Swedish, it refers to *place*. Thus we cannot say, "We are going *till* town;" but we say, "Wait *till* I come, *till* my arrival;" literally, "Wait to I come, to my arrival;" that is, to the time of arrival. The difference is not in the sense of the preposition, but in its application.

The Scotch retain the Danish and Swedish use of this word; no slight evidence of their origin.

*U*, in Danish, the Swedish *O*, is a prefix, equivalent to *in*, and is used as a privative or negative; as in *uaar*, an unreasonable year; *uortig*, uncivil.

## RUSSIAN.

*To* or *re*, signifies *in*, *at*, *by*, and may possibly be from the same root as the English *be*, *by*. But see *yo*.

*Za*, is a prefix signifying *for*, *on account of*, *by reason of*, *after*; as in *zaridnyu*, to envy, from *vid*, visage; *ziju*, to see, Latin *video*; *zaduayu*, from *deru*, to tear; *zamirayu*, to be astonished or stupefied, from the root of Latin *miror*, and Russian *mir*, peace; *miryu*, to pacify, to reconcile; *mirnie*, pacific; *zamirenje*, peace, pacification; *zamirayu*, to make peace; Arm. *miret*, to hold, to stop; the radical sense of wonder, astonishment, and of peace.

*Ko*, a preposition, signifying *to*, *toward*, *for*.

*Na*, a preposition and prefix, signifying *on*, *upon*, *at*, *for*, *to*, seems to be the German *nach*, Dutch *na*; as in *nagrada*, recompense; *na*, and the root of Latin *gratia*; *nasidayu*, to sit down, &c.

## INTRODUCTION.

*Nad*, a preposition, signifying *above* or *upon*.

*O*, a preposition, signifying *of* or *from*, and *for*.

*Oh*, a preposition and prefix, signifying *to*, *on*, *against*, *about*; as *ohmenayn*, to surround, to embrace; *oh* and Saxon *neman*, to take.

*Ol*, is a preposition, signifying *from*, and it may be the English *out*.

*Pol*, is a preposition and prefix of extensive use, signifying *in*, *by*, *after*, *from*, &c. as *podayn*, to give to; *polagayn*, to lay, to expend, employ, lay out; to tax or assess; to establish or fix; to believe or suppose; *po* and *lay*. This corresponds with English *by*, and the Latin has it in *possidre*, and a few other words. [Saxon *besittan*.] *Pomen*, remembrance, *po* and *mens*, mind.

*Rad*, a preposition, signifying *for*, or *for the love of*.

*So*, a preposition and prefix of extensive use, signifying *with*, *of*, *from*; and as a mark of comparison, it answers nearly to the English *so* or *as*.

*Y*, with the sound of *u*, is a preposition and prefix of extensive use. It signifies *near*, *by*, *at*, *with*, as *uberayn*, to put in order, to adjust, to cut, to reap, to mow, to dress, French *parer*, Latin *puro*; *ugola*, satisfaction; *ugodnei*, good, useful, English *good*; *udol*, a dale, from *dol*.

### WELSH.

The prefixes in the Welsh language are numerous. The following are the principal.

*Am*, about, encompassing, Saxon *amb*, Greek *αμφι*.

*An*. See Saxon *In*.

*Cy*, *cyd*, *cyr*, *cym*, implying union, and answering to *cum*, *con* and *co* in Latin. Indeed *cym*, written also *cye*, seems to be the Latin *cum*, and *cy* may be a contraction of it, like *co* in Latin. *Cu* seems also to be a prefix, as in *caboli*, to polish, Latin *polio*.

*Cyn*, *cyst*, former, first, as if allied to *begin*.

*Di*, negative and privative.

*Dix*, negative and precise.

*Dy*, iterative

*E* and *ec*, adversative.

*Ed* and *eil*, denoting repetition, like *re*, Saxon *ed*, *oth*.

*Es*, separating, like Latin *ex*. See *ys*.

*Go*, extenuating, inchoative, approaching, going, denotes diminution or a less degree, like the Latin *sub*; as in *gobrid*, somewhat dear. This seems to be from the root of English *go*.

*Han*, expressive of origination.

*Lled*, partly, half.

*Off*, all.

*Thag*, before.

*Thy*, over, excessive.

*Tra*, over, beyond. Latin *trans*.

*Try*, through.

*Ym*, mutual, reflexive.

*Ys*, denoting from, out of, separation, proceeding from, answering to the Latin *ex*; as *yspetuar*, to expel. So *ex*, Welsh *estyn*, to extend.

Most of these prepositions, when used as prefixes, are so distinct as to be known to be prefixes.

But in some instances, the original preposition is so obscured by a loss or change of letters, as not to be obvious nor indeed discoverable, without resorting to an ancient orthography. Thus without the aid of the Saxon orthography, we should probably not be able to detect the component parts of the English *tail*. But in Saxon it is written *edwitan* and *othwitan*; the preposition or prefix *oth*, with *witan*, to disallow, reproach, or cast in the teeth.

It has been above suggested to be possible, that in the Shemitic languages, the *z* in trilateral roots, may be the same prefix as the Russian *na*, the Dutch *na*, and the German *nach*. Let the reader attend to the following words.

Hebrew *נבט*, to look, to behold, to regard. The primary sense of *look*, is, to reach, extend, or throw.

Ch., to look; also to *bud* or sprout.

Ar. *نبت* *nabata*, to spring, or issue as water; to flow out; to devise or strike out; to draw out.

If the first letter is a prefix, the Hebrew word would accord  
viii

with Latin *videre*; the Chaldee, with *video* and with *bud*, Spanish *bolar*, French *bouton*, *bouter*, to put, and English to *pout*, and French *bout*, end, from shooting, extending.

Ar. *نبت* *nabatha*, to bul; to germinate. See Ch. *supra*.

Heb. *נפל* *naval*, to fall; to sink down; to wither; to fall off, as leaves and flowers; to act foolishly; to disgrace. Derivative, foolish; a fool; *נפל* *nafal*, Heb. Ch. Syr. Sam. to fall. Ch. *נבל* *nabal*, to make foul; to defile; that is, to throw or put on.

Ar. *نبل* *nubala*, to shoot, as an arrow; to drive as camels;

to excel; also to die, that is, probably, to fall.

Can there be any question, that *fall*, *foul*, and *fool* are this very word, without the first consonant? The Arabic without the first consonant agrees with Gr. *βαλλω*, and the sense of falling then, is to throw one's self down.

Heb. *נצר* *natar*, to keep, guard, preserve, retain, observe.

Ch., to observe; to keep; to lay up.

Syr. and Sam. *id*.

Eth. *ነሰር* *natar*, to shine.

Ar. *نظر* *natura*, to keep; to see; to look; to attend.

Remove the first letter, and this coincides with the Greek *τινω*.

No person will doubt whether *נמל* *namal*, to circumcise, is formed on *מל* *mul*.

Ch. *נצר* *nasar*, to cut; to saw. Syr. *id*. Lat. *serra*, *serro*.

Ar. *נפד* *nafida*, to fade, to vani-h, to perish, to be empty, to fail.

Heb. *נפח* *nafach*, to blow, to breathe. Ch. Syr. Eth. Ar. *id*. from *נחם*, *nach*, to blow.

If the Shemitic *n* in these and similar words is a prefix or the remains of a preposition, it coincides very closely with the Russ. and Dutch *na*, and the latter we know to be a contraction of the German *nach*. Now the German *nach* is the English *nigh*; for no person can doubt the identity of the German *nachbar* and the English *neighbour*.

In the course of our investigations, we very early began to suspect that *b*, *f*, *p*, *c*, *g* and *k*, before *l* and *r*, are either casual letters, introduced by peculiar modes of pronunciation, or the remains of prepositions; most probably the latter. We had advanced far in the Dictionary, with increasing evidence of the truth of this conjecture, before we had received Owen's Dictionary of the Welsh language. An examination of this work has confirmed our suspicions, or rather changed them into certainty.

If we attend to the manner of articulating the letters, and the case with which *bl*, *br*, *fl*, *fr*, *gl*, *pr*, *cl*, *cr*, *gl*, *gr* are pronounced, without an intervening vowel, even without a shewa, we shall not be surprised that a preposition or prefix, like *be*, *pe*, *po*, or *ge*, should, in a rapid pronunciation, lose its vowel, and the consonant coalesce closely with the first letter of the principal word. Thus *blank*, *prank*, might naturally be formed from *beblank*, *perank*. That these words are thus formed, we do not know; but there is nothing in the composition of the words to render it improbable. Certain it is, that a vast number of words are formed with these prefixes, on other words, or the first consonant is a mere adventitious addition; for they are used with or without the first consonant. Take the following examples:—

Hiberno-Celtic, or Irish, *brac* or *brack*, the arm, is written also *raigh*, Welsh *braig*, whence *βραχίον*, brachium. *Braigh*, the neck, Sax. *hraca*, Eng. *rack*, Gr. *ῥαχίς*. *Fraoch*, heath, Ing. *brake*, L. *erica*.

Welsh *llawr*, Basque *lurra*, Eng. *floor*.

Lat. *stercus*, Eng. *stork* or *lork*.

Sax. *hraccan*, Eng. to *reach*, in vomiting.\*

Sax. *hracod*, Eng. *ragged*.

\* *ll* before *t* and *r* in Saxon corresponds to the Greek *ρ*, and Latin *q*, before the same letters.

## INTRODUCTION.

Ger. *rock*, Eng. *frock*.  
Dutch *geluk*, Ger. *gluck*, Eng. *luck*.  
Greek, Ionic dialect, *βεδον*, for *βεδω*, a rose.  
Latin *clunis*, Eng. *loin*, G. *lende*, W. *clun*, from *llon*.  
Eng. *cream*, Ger. *rahm*, Dutch *room*.  
Sax. *hlaf*, Polish *chlieb*, G. *leib*, Eng. *loaf*.  
Sax. *hladan*, Eng. *to lade or load*, Russ. *kladu*, *to lay*.  
Greek *κλινω*, Lat. *clino*, Sax. *klinian*, *hleanan*, Russ. *klonyu*,  
Eng. *to lean*.  
Greek *λαγνος*, Lat. *lagena*, Eng. *flagon*.  
Sax. *hrysan*, Eng. *to rush*.  
French *frapper*, Eng. *to rap*.  
Sax. *geredian*, *to make ready*; in Chaucer, *greith*, *to make ready*. Sax. *hræd*, *quick*; *hradian*, *to hasten*; *hrædnes*, Eng. *readiness*.  
Spanish *frisar*, *to curl or frizzle*; *rizar*, the same.  
Sax. *geresa*, Eng. *reeve*, G. *graf*, D. *graaf*.  
Lat. *glycyrrhiza*, from the Greek; Eng. *liquorice*.  
But in no language have we such decisive evidence of the formation of words by prefixes, as in the Welsh.  
Take the following instances, from a much greater number that might be produced, from Owen's Welsh Dictionary.  
*Blanc*, a colt, from *llanc*.  
*Blith*, milk, from *lith*.  
*Bliant*, fine linen, from *lliant*.  
*Plad*, a flat piece or plate, from *llad*.  
*Pled*, a principle of extension, from *llad*.  
*Pledren*, a bladder, from *pledry*, that distends, from *llad*.  
*Pleth*, a braid, from *lleth*, Eng. *plat*.  
*Plicciaw*, *to pluck*, from *llig*.  
*Ploc*, a block, from *lloc*; *plociaw*, *to block*, *to ply*.  
*Plung*, a plunge, from *lleng*, our vulgar *lung*.  
*Gluth*, a glutton, from *lleth*.  
*Glas*, a blue colour, verdancy, a green plat, whence Eng. *glass*, from *llas*.  
*Glyd*, gluten, glue, from *llgd*.  
*Clacr*, clear, from *llacr*.  
*Clav*, sick, from *llav*.  
*Clwpa*, a club, a knob, from *llwb*.  
*Clwl*, a piece, a clout, from *llwl*, *llr t*.  
*Clump*, a mass, a lump.  
*Clurd*, a thin board, from *llard*.  
*Cledyr*, a board or shingle, whence *cledryg*, *lattice*, from *llcd*.  
*Bran*, Eng. *bran*, from *rhau*; *rhauw*, *to rend*.  
*Brid*, a breaking out, from *rhid*.  
*Broc*, noise, tumult, a brock, from *rhoc*.  
*Broc*, froth, foam, anger, *broci*, *to chafe or fret*, from *lwrw*, *a boiling or ferment*, from *rhew*, something *rough*, a grunt, Gr. *βρυγω*.  
*Bryd*, what moves, impulse, mind, thought, from *rhyl*.  
*Brys*, quickness, *brysiaw*, *to hasten*, *to shoot along*, from *rhys*, Eng. *to rush*, and *crysiaw*, *to hasten*, from *rhys*, *to rush*. [Here is the same word *rhys*, with different prefixes, forming *brysiaw* and *crysiaw*. Hence W. *brysg*, Eng. *brisk*.]  
*Graz*, [pronounced *grath*.] a step, a degree, from *rhaz*, Lat. *gradus*, *gradior*.  
*Grey*, a cackling, from *rhag*.  
*Grem*, a crashing, gnash, a murmur, *gremiaw*, *to crash or gnash*, from *rhem*. Hence Lat. *fremo*, Gr. *βριμω*.\*

\* We do not follow Owen to the last step of his analysis, as we are of opinion that, in making monosyllabic words to be compound, he often errs. For example, he supposes *broc*, a tumult, to be from *rhoc*, a broken or rough utterance; a grunt or groan; and this, to be a compound of *rhyl*, excess, what is over or beyond, and *oc*, a forcible utterance, a groan. We believe *rhoc* to be a primitive uncompounded word, coinciding with the English *rough*.

Owen supposes *plad*, a flat thing, a plate, to be from *llad*, with *py*. *Llad* he explains, what is given, a gift, good things, and *py*, what is inward or involved. We have no doubt that the first letter is a prefix in *plad*, but beyond all question, *llad* is from the same root as *llcd*, breadth, coinciding with Lat. *latus*; both from a common root signifying to extend. But we do not believe *llad* or *llcd* to be compound words.

*Dug*, a duke, Owen supposes to be formed on *ug*, over; which cannot be true, unless the Latin *dux*, *duco*, are compounds. *Dur*, steel, he derives from *ur*, extreme, over, but doubtless it is from the root of the Latin *durus*.

So *par*, signifying what is contiguous, a state of readiness or preparation, a pair, fellow, or match, Owen makes a compound of *py*, and *ar*; *py*, as above explained, and *ar*, a word of various significations, on, upon,

We have some instances of similar words in our own language; such are *flag* and *lag*; *flap* and *lap*; *clump* and *lump*.

There is another class of words which are probably formed with a prefix of a different kind. We refer to words in which *s* precedes another consonant, as *scalp*, *skull*, *slip*, *slide*, *sluggish*, *smoke*, *smooth*, *speed*, *spire*, *spin*, *stage*, *steep*, *stem*, *swell*, *spout*. We find that *tego*, to cover, in Latin, is in Greek *στιγω*; the Latin *fullo*, is in Greek *σφαλλω*. We find *μαργαρις* is written also *σμαργαρις*; and it may be inquired whether the English *spin*, is not from the same root as *σπιν*, web or woof, *σπινω*, a spindle, *σπινω*, to spin. *Sprout* in English is in Spanish *brotu*.

We find the Welsh *ysbrig*, the English *spig*, is a compound of *ys*, a prefix denoting *issuing* or *proceeding from*, like the Lat. *ex*, and *brig*, top, summit.

*Ysgar*, a separate part, a share; *ysgar*, *ysgaru*, to divide; *ysgariaw*, to separate, is composed of *ys* and *car*, according to Owen; but the real root appears distinctly in the Gr. *μεγε*. This is the English *shear*, *shire*.

*Ysgegiaw*, to shake by laying hold of the throat, to shake roughly, is a compound of *ys* and *cegiaw*, to choke, from *ceg*, the mouth, an entrance, a choking. This may be the English *shake*; Sax. *sceacan*.

*Ysgin*, a robe made of skin; *ys* and *cin*, a spread or covering.

*Ysgodi*, to shade; *ysgawd*, a shade; *ys* and *cawd*.

*Ysgrib*, what is drawn up or puckered, a scrip; *ys* and *crab*, what shrinks. See Eng. *crab*, *crabbed*.

*Ysgrawu*, to scrape; *ys* and *crav*, claws, from *rhav*.

*Ysgreg*, a scream, a shriek, *ysgreiaw*, to shriek, from *creg*, a shriek, *cregian*, to shriek, from *creg*, *cryg*, hoarse, rough, from *rhyy*, rye, that is, *rough*; the grain so named from its roughness. This is the English *rough*, Lat. *raucus*. Here we have the whole process of formation, from the root of *rough*. We retain the Welsh *cregian*, to shriek, in our common word, to *creak*, and with a formative prefix, we have *shriek*, and our vulgar *scream*. The Latin *rugis*, a wrinkle, Eng. *rug*, *shrug*, are probably from the same source.

*Ysgriennu*, to write, Lat. *scribo*, from *ysgriv*, a writing, from *erie*, a mark cut, a row of notches; *criciaw*, to cut, to *grove*; from *rhic*, something that divides. Hence *scrievener*.

*Ysgub*, a sheaf or besom, *ysgubaw*, to sweep, Lat. *scopa*, from *cub*, a collection, a heap, a cube.

*Ysgul*, something that whirls; *ysguldaw*, to whirl or *send*; from *cud*, celerity, flight; *ysguth*, *ysguthaw*, the same.

*Ysgeth*, a push; *ysgethiaw*, to push or thrust; from *geth*, *gethiaw*, the same; probably allied to Eng. *shoot*. The Welsh has *ysgythu*, to jet or spout, from the same root.

*Yslac*, slack, loose; *yslaciaw*, to slacken; from *llac*, loose, slack, *llaciaw*, to slacken, from *llag*, slack, *sluggish*; allied to Eng. *lag* and *slow*.

*Yslapiaw*, to slip, to flop, from *yslab*, what is lengthened or distended, from *llab*, a flag, a strip, a stroke. *Llabi*, a tall, lank person, a stripling, a looby, a lubber, is from the same root; *llabiaw*, to slip.

*Yslcd*, a sled, from *llcd*, says Owen, which denotes breadth, but it is probably from the root of *slide*, a word probably from the same root as *llcd*, that is, to extend, to stretch along.

*Ysmot*, a patch, a spot; *ysmotiaw*, to spot, to dapple, from *mod*, Eng. *note*.

*Ysmuciaw*, *ysmygu*, to dim with smoke, from *myg*, smoke. So *smooth*, from Welsh *myrth*.

*Yspail*, *spoil*, from *pail*, farina, says Owen. We should say from the root of *palea*, straw, refuse, that is, from the root of *prel*, to strip. *Ysprihiadu*, to be pifering.

*surface*, &c. But there can be no doubt that *par* is from the root of the Latin *paro*, to prepare, being the Latin *par*, equal; the root of a numerous family of words not only in the Japhetic languages of Europe, but in the Shemitic languages of Asia. It certainly is not a Welsh compound, nor is there the least evidence to induce a belief that it is not an uncompounded word. Had the learned author of the Welsh Dictionary extended his researches to a variety of other languages, and compared the monosyllabic roots in them with each other, we think he would have formed a very different opinion as to their origin. We are very well convinced that many of the words which he supposes to be primitive or radical, are contractions, such as *rhyl*, *lle*, *lly*, the last consonant being lost.

## INTRODUCTION.

*Ypeliaw*, to *erpel*, from *pel*, a *ball*, says Owen: but this is the Latin *expello*, from *pello*. *Ball* may be from the same root.

*Yspig*, a *spike*, a *spine*; *yspigaw*, to *spike*; from *pig*, a sharp point, a *pike*. Hence Eng. *spigot*.

*Ypin*, a *spine*, from *pin*, *pen*.

*Ysgynu*, to *ascend*, Lat. *ascendo*, from *cyn*, first, chief, foremost. The radical sense is to shoot up.

*Yslac*, a *slough*, from *lluc*, a collection of water, a *lake*.

*Yspar*, a *spear*, from *pár*, a cause or principle of producing, the germ or seed of a thing, a *spear*. This consists of the same elements as *ber*, a spit, and Eng. *bar*, and in Italian *bar* is *sbarra*. The primary sense is to shoot, thrust, drive.

*Yspinc*, a *finch*, from *pinc*, gay, fine, brisk; a sprig, a *finch*.

*Ysplan*, clear, bright; *ysplana*, to explain; from *plan*, that is parted off, a ray, a shoot, a planting, a *plaur*; whence *plant*, a child; Eng. a *plant*; *plannu*, to shoot, as a plant. Hence splendour, W. *ysplander*.

*Ysporthi*, to support, from *porth*, a bearing, a *port*, passage, &c. Lat. *porta*, *porto*.

*Ystac*, a *stuck*, a heap; *ystaca*, a standard; from *tag*, a state of being stuffed or clogged.

*Ystad*, a *state*; *ystadu*, to *stay*; from *tad*, that spreads, a continuity. The primary sense is to set.

*Ystain*, that is spread; a *stain*; *tin*, Lat. *stannum*; *ystaen-luc*, to spread over, to stain; *ystaenu*, to *tin*, or cover with *tin*; from *taen*, a spread, a layer. Qu. is *tin* from spreading?

*Ystael*, a *stool*, from *tael*, a cast or throw. The sense is to set, to throw down. *Tael* is the root of *deal*.

*Ystor*, a *store*, that forms a bulk, from *tor*, a swell, a prominence.

*Ystorn*, a *storm*, from *form*, that is stretched, but the sense is a rushing.

*Ystym*, a *stream*, from *trym*, compact, *trim*, that is, stretched, straight, from extending.

*Ystump*, a *stump*, from *tump*, a round mass, a *tump*.

*Yswataw*, to *squat*, from *yswad*, a throw, or falling down, from *gwad*, a denial; *gwada*, to deny or disown. If this deduction is correct, the sense of denial is a throwing or thrusting back, a repelling. It is so in other words.

*Yswdraw*, to chirp, twitter, from *yswid*, that makes a quick turn. Qu. *twitter*.

In some of the foregoing words it appears evident that the Welsh prefix *ys*, is an alteration of the Latin *ex*, and the words in which this is the case, were probably borrowed from the Latin, while the Roman armies had possession of England. But there is a vast number of words, with this prefix, which are not of Latin origin; and whether *ys* is a native prefix in the Welsh, may be a question. One thing is certain, that *s* before another consonant, and coalescing with it, is, in a great number of words, a prefix.

The modern Italian affords abundant proof of the extensive use of *s*, as the remains or representative of *ex*; as *sballare*, to unpack, *ubale*; *sbarbato*, beardless; *sbattere*, to abate; *sbiancare*, to pluck off branches; *scaricare*, to discharge; *scomodare*, to incommode; *scorcodia*, discord; *scornare*, to break the horns; *scrostare*, to pull off the crust; and a great number of others.

Now if the same manner of forming words with this prefix has actually prevailed among the northern nations of Europe, we may rationally suppose that many English words, and perhaps all of this class, are thus formed. Thus *scatter* may be formed from a root in *Cd*; *shape*, from *Cb*, *Cf*, or *Cp*; *skill*, from the root of Lat. *calleo*; *slip*, from the root of Lat. *labor*; *smart*, from the root of Lat. *amarus*, bitter. Heb. *סר*; *smite*, from the root of Latin *mitto*; *span*, from the root of *pan*, to stretch; *spar*, from the root of *bar*; *speak*, from the root of Lat. *coro*; *speed*, from a root in *Pd*, perhaps Lat. *peto*; *steal*, from the root of Lat. *tollo*; *sterp*, from the root of *deep*; *stretch*, from the root of *reach*; *sueep*, from the root of *wipe*; *swan*, from *wan*, white; *swell*, from the root of to *well*, Sax. *wellan*, to boil, &c. That many English and other Teutonic and Gothic words are thus formed, appears to be certain.

These facts being admitted, let us examine a little further. In Russ. *svadiba*, is a wedding. Is not this formed on the root of *wed*, with *s* for a prefix? *Svara*, is a quarrel. Is not this formed on the root of *vary*, *variance*, or of *spur*? *Serio*,

is a borer; qu. *bore* and *veru*; *svertivayu*, to roll; qu. Lat. *verto*; *skora*, furs, peltry; qu. Fr. *cuir*; *slot*, a beast; qu. *cattle*; *skupayu*, to purchase in gross; qu. *cheap*, Dan. *kioben*, and its root; *slabei*, weak; qu. Lat. *labor*, *lapus*; *slagayu*, to fold; qu. *lay*, and *plico*; *slivayu*, to pour out liquors; qu. Lat. *libo*; *slupayn*, to peel off bark or skin; qu. Lat. *liber*; *snimayu*, to take away; qu. Sax. *neman*, to take; *snovu*, new; qu. Lat. *novus*; *snig*, *sneig*, snow, Fr. *neige*. The Lat. *niris* is from this root, with *g* opened to *v*. Russ. *spletayu*, to *plait*, &c.

The Russ. prefix *so*, occurs in a great number of words; *sobirayu*, to collect or assemble, precisely the Heb. and Ch. *סב*.

It now becomes an interesting question, to determine how far any analogy exists between the languages of the Japhetic and Shemitic families in regard to prefixes. For example, in the Shemitic languages, *ב* is a prefix of extensive use, corresponding almost exactly with the English and Dutch *by*, the Saxon *be*, and German *bei*. This preposition and prefix has several senses in the Saxon which are now obsolete; but its present prevailing sense occurs in all the Shemitic languages. *כדו ביהוה קרים*, by a strong east wind; Ex. xiv. 21. Compare the following definitions of this preposition; the Sax. from *lyc*, and the Shemitic from *Castle*.

Sax. *de*, *e*, *ex*, *in*, *secus*, *ad*, *jucla*, *secundum*, *pro*, *per*, *super*, *propter*, *circa*.

Heb. Ch. Syr. *in*, *e*, *ex*, *cum*, *propter*, *usque ad*, *adco ut*, *ad*, *super*, *per*, *contra*, *ante*.

Eth. *en*, *per*, *pro*, *propter*, *cum*, *secundum*, *apud*.

Ar. *in*, *cum*, *propter*, *per*, *ad*, *erga*.

In Numbers, xiv. 34, it signifies according to, or after; *במשפט הימים*, according to the number of days. This signification is now perhaps obsolete in English, but was common in the Saxon; as, "*be his magnum*," according to his strength; *pro viribus suis*. So "*be than mastan*," by the most, is now expressed by, *at the most*.

Now it is remarkable that this word in Hebrew, Arabic, and Persic, is the preposition used in oaths, precisely as it is in English; Gen. xxii. 16, *ב*, By myself have I sworn. Arabic,

*ballah* or *by Allah*; Persic, *بهدا* *bechoda*, or *begoda*, *by Gori*,

the very words now used in English. The evidence, then, is decisive, that the Shemitic prefix *ב* is the Teutonic *be*, *by*, *bei*, contracted, and this Teutonic word is certainly a contraction of *big*, which is used in the Saxon, especially in compound words, as in *bigspell*, [*hy-spell*,] a fable; *bigstandan*, to stand *by*. This prefix, then, was in universal use by the original stock of mankind, before the dispersion; and this word alone is demonstrative proof of the common origin of the Shemitic and Teutonic languages. Now it is equally certain that this is the prefix *b*, and probably *p*, before *l* and *r*, in *block*, *braigh*, and a multitude of words in all the modern languages; and probably, the same letter is a prefix in many Shemitic words.

We know that *be* in the Saxon *bedelan*, and Dutch *bedelen*, is a prefix, as the simple verb is found in all the Teutonic and Gothic languages. The Hebrew and Chaldean *בדל* corresponds exactly in elements and in signification with the Saxon and Dutch. Whether the first letter is a prefix in the latter languages, let the reader judge. See the word *deal*, which, when traced, terminates in the Welsh *tael*, a cast off, a throw; separation; *taelu*, to cast or throw off, to separate.

In Chaldean, *בדר* *bador*, signifies to scatter, to disperse. The word has the same signification in the Syriac and Samaritan.

In Ethiopic, the word with *ለ* prefixed, signifies to wish, love, desire, and with *ተ* prefixed, to strive, to endeavour, and without a prefix, strife, course, race. Both these significations are from stretching, straining.

In Arabic, *بدر* *badara*, signifies generally to hasten, to run

to; but *بذر* *bathara*, signifies to disperse, to sow or scatter seed.

This verb is written in Hebrew *ביר* with precisely the same

## INTRODUCTION.

signification. The Arabic also has the verb with this orthography signifying to sow, and also to beat or strike with a stick.

Now in Syriac <sup>ܕܪ</sup> *dar*, signifies to strive, or struggle. Here we have the simple verb, *without* the prefix, with the sense of the Ethiopic, *with* a prefix. Supra.

We find also the Arabic <sup>ذَرَّ</sup> *tharra*, the simple verb, signifies to sprinkle.

We find in Chaldee <sup>ܕܪܐ</sup> *darra* and <sup>ܕܪܐ</sup> *darra* the simple verb, signifies to disperse; in Syriac, the same. In Arabic <sup>ذَرَا</sup> *thara*, signifies to sow, like the foregoing verb, and hence to procreate. Both this and the former verb signify also to whiten, as the hair of the head, as we say, to *sprinkle* with gray hairs. The

Arabic <sup>ذَرَا</sup> *dara*, signifies to drive, to impel, to repel, to contend, to strive; to shine, to sparkle. And here we have the literal signification of this whole class of verbs; to drive, urge, throw, send; hence to scatter, to strive, to shoot as rays of light, procreate, &c.

The Hebrew corresponding verb is <sup>דָּרַס</sup> or <sup>דָּרַס</sup> to scatter, to sow; and the word with the like orthography occurs in Ch. Syr. and Ar. This is the Latin *sero*. And who can doubt that <sup>ב</sup> is a prefix in the verb <sup>בָּרַס</sup> above mentioned?

In Welsh, *gobru* signifies to work, to operate: *gobru*, work, operation; formed by the prefix *go* and *per*; *go* denoting progress toward, approach, and *per* rendered by Owen, that pervades, a fruit, a pear; but the real sense is to strain, to bring forth, to drive, thrust, urge, &c.

This word, in the Amorite dialect, is written either *gobru* or *ober*; in Latin *operor*, whence Eng. *operate*. The same word is in the Ethiopic, <sup>ገብረ</sup> *gaber*, to make, to do; <sup>ገብረ</sup> *gaber*, to cause to be made; <sup>ገብረ</sup> *gabbar*, to work, operate, negotiate; <sup>ገብረ</sup> *gabbar*, a maker.

This is the Heb. and Ch. <sup>גָּבַר</sup> *gabbar*, to be strong, to prevail, to establish, and as a noun, a man; Ar. <sup>جَبَر</sup> *jabara*, to make strong, to heal, as a broken bone; to strengthen.

That this Shemitic word and the Welsh and Ethiopic are all radically one, there cannot be a question; and the Welsh proves indisputably that *g* is a prefix. This, then, is a word formed on <sup>ב</sup> or <sup>ב</sup>. The Heb. <sup>גָּבַר</sup> *gabbar*, strong, that is, strained, and <sup>גָּבַר</sup> *gabbar*, a wing, that is, a shoot, are from the same root, and

in Arabic <sup>أَبَرَّ</sup> *abara*, signifies to prick, to sting, and its derivatives, the extremity of a thing, a point, a needle, corresponding with the Welsh *bar*, a summit, a tuft, a branch, a *bar*, and the Welsh *bar*, a pike, a lance, a spit, a *spear*, Lat. *verru*; in Welsh, also, *per*, a spear, and *per*, a spit, are all doubtless of the same origin.

In Syriac, <sup>ܕܪܐ</sup> *darra*, signifies to make, to work or operate. Is this the same root with a different prefix?

The same word in Arabic, <sup>صَبَر</sup> *tsabara*, signifies to be patient, to *bear*, to sustain.

We observe, that in the Teutonic and Gothic languages, the same word is used with different prefixes. Thus in our mother tongue, *begin* is written *gynnan*, the simple radical word, and *agynnan*, *beginnan*, and *ongynnan*; and in the Gothic, *uginnan*, which, in English, would be *fogin*.

Should it appear upon investigation, that verbs in the Assyrian languages have the same prefixes which occur in the European languages, the fact will evidence more affinity between the languages of these two stocks than has yet been known to exist.

Let us now attend to the natural causes which may be supposed to have obscured or destroyed the identity or resemblance of languages which had a common origin.

The affinity of words, in two or more different languages, is known by identity of letters and identity of signification; or

by letters of the same organ, and a signification obviously deducible from the same sense. Letters of the same organ, as for example, *b, f, p* and *r*, are so easily converted, the one into the other, and the change is so frequent, that this circumstance seldom occasions much obscurity. The changes of signification occasion more difficulty, not so much by necessity, as because this branch of philology is less understood.

### 1. CHANGE OF CONSONANTS WHICH REPRESENT THE ARTICULATIONS OF THE ORGANS OF SPEECH.

Consonants are the stamina of words. They are convertible and frequently converted into their cognates. The English word *bear*, represents the Latin *fero* and *pario*, and *fero* is the Greek *φω*. The Latin *ventus* is *wind* in English; and *habeo* is *have*. The Latin *dans*, in Dutch, Danish and Swedish is *land*; and *dance* in English is in German *tanz*.

These changes are too familiar to require a multiplication of examples. But there are others less common and obvious, which are yet equally certain. Thus in the Gaelic or Hiberno-Celtic, *n* and *m* are convertible with *v*; and in Welsh *m* and *v* are changed, even in different cases of the same word. Thus in Irish the name of the hand is written either *lanh* or *lav*, and in Welsh *muen*, a stone, is written also *vaen*. The Greek *β* is always pronounced as the English *v*, as *βουλομαι*, Lat. *volu*, English *will*, German *wollen*; and the sound of *δ* the Greeks express by *μβ*.

In the Chaldee and Hebrew, one remarkable distinction is the use of a dental letter in the former, where the latter has a sibilant. As <sup>כִּי</sup> *cuth* in Chaldee, is <sup>כִּי</sup> *cush* in Hebrew; <sup>זָהָב</sup> *gold* in Chaldaic, is <sup>זָהָב</sup> *gold* in Hebrew. The like change appears in the modern languages; for *water*, which in most of the northern languages is written with a dental, is in German written *wasser*; and the Latin *dens*, W. *dant*, Dutch *tand*, Swedish and Danish *tand*, is in German *zahn*. The like change is frequent in the Greek and Latin. *φραττω*, in one dialect, is *φρασσω*, in another; and the Latins often changed *t* of the indicative present, or infinitive, into *s* in the preterit and participle, as *mitto*, *mittere*, *misi*, *missus*.

*L* and *r*, though not considered as letters of the same organ, are really such and changed the one into the other. Thus the Spaniards write *blandir* for *brandish*, and *escorta* for *escort*. The Portuguese write *branda* for *bland*, and *brunquear*, to whiten, for *blanch*. The Greek has *φραγελλον* for the Latin *flagellum*. In Europe, however, this change seems to be limited chiefly to two or three nations on the coast of the Mediterranean. *L* is sometimes commutable with *d*.

We have a few instances of the change of *g* or *gh* into *f*. Thus *rough* is pronounced *ruf*, and *trough*, *trauf*.

The Russian often change the *d* of a noun into the sound of *j*, or the compound *g*, in the verb formed from that noun; as *lad*, accord, harmony; *laju*, to accord or agree; *bred*, damage, loss; *breju*, to injure.

The Italians and French have also changed a dental into a palatal letter, in many words; as Italian *raggio*, a ray, from Lat. *radius*; and *ragione*, reason, from *ratio*; Fr. *manger*, to eat, from Lat. *mando*, or *manduco*.

In the south of Europe, the Greek *χ* has been changed, in some instances, into the Italian or Spanish *z*, and then by the French into *s*. It seems that the Spanish *z* has, at some former period, been pronounced as a guttural. Thus the Gr. *βραχίον*, Lat. *brachium*, the arm, is in Spanish *brazo*, and the Spaniards have the word from the Latin, or from the same source as the Latin and Greek, the Celtic *braic*. This word, *brazo*, the French changed into *bras*, and from that we have *brace* and *embrace*. A similar change occurs in *Durazzo*, from *Dyrrachium*, and in the Spanish *luz*, light.

The Teutonic nations often used *h* to express the power of the Greek *κ*, and the Latin *c*, as *heart* for *καρδία*, horn for *cornu*. Hence we find that the Saxon *hlinian*, *hleanian* or *hlynian*, to lean, is the Greek *κλινω*, Latin *clinio*. The letter *h* is now dropped, and we write the word *lean*.

In like manner, the Saxon *hlid*, which we now write *lid*, is from the same root as the Latin *claudo*, *cludo*, the Greek *κλυδω*, which is contracted into *κλυω*. And in this word we may notice another fact, that the word signifies not only to shut, but to praise or celebrate, proving that this word and the

## INTRODUCTION.

original word is in the Gaelic and Irish, *agalla*. So *γ* is prefixed to another palatal or guttural letter in *αγγω, ογγος, γγγω*.

A similar nasal sound of *g* probably introduced the *n* before *g* in *lingo*, to lick; *linguo*, to leave.

We may be confident, in all cases, that *n* is not radical, when it is dropped in the supine and participle, as in *lictum*, *lictus*, from *linguo*. When *n* is retained in the supine and participle, there may be more reason for doubt; but in this case, the question may often be determined by the corresponding word in another language, or by some other word evidently of the same family. Thus we can have little doubt that *lingo* and the English *lick* are the same word, or that the Lat. *lingua* and *ligula* are of one family.

This casual insertion of *n* in words of this class must be carefully noticed by the etymologist, or he will overlook the affinity of words which are evidently the same. We have many words in English which are written with *n* before a *g* or a *k*, when the ancient words in the Gothic and Teutonic languages, and some of them in the modern Danish and Swedish, are written without *n*. Thus *sink*, in Gothic is *sigcwan*; to think, is *thagkyan*. It is not improbable that the Gothic word was pronounced with the sound of *n* or *ng*, as in English. So also in *siggan*, to sing; *luggs*, long. In a few instances we find the Swedes and Danes have the word written

in both ways, as *tuuka*, *tuaker* and *tycka*, *tykker*, to think. But in general the Germans, Danes, Swedes, and Dutch write words of this sort with *ng*.

To show how important it is to know the true original orthography, we will mention one instance. In our mother tongue the word to *dye*, or colour, is written *dye*; the elements or radical letters are *dy*. To determine whether this and the Latin *tingo* are the same words, we must first know whether *n* in *tingo* is radical or casual. This we cannot know with certainty, by the form of the word itself, for the *n* is carried through all the tenses and forms of the verb. But by looking into the Greek, we find the word written with *γ*, *τιγγω*; and this clearly proves the alliance of the word with *deigan*. See *DYE* in the Dictionary.

We have many English words, in which a *d* has been inserted before *g*, as in *badger*, *badger*, *lodge*, *pledge*, *wedge*. In all words, we believe, of this class, the *d* is casual, and the *g* following is the radical letter, as *pledge* from the French *pleige*; *wedge* from the Saxon *wecg*. The practice of inserting *d* in words of this sort seems to have originated in the necessity of some mode of preserving the English sound of *g*, which might otherwise be sounded as the French *g* before *e*. And it is for this reason we still retain and ought to retain *d* in *alledge*, *abridge*. In like manner the Teutonic *c* has been changed into the sound of *ch*, as Sax. *wacian*, *waccian*, to wake, to watch; Sax. *thac*, *thatch*.

There are some nations which, in many words, pronounce and write *g* before *u* or *w*; as in the French *guerre*, for *war*; *guerre*, for *war*; *guetter*, for *wait*; in Welsh, *gwad*, for *wall*; *gwann*, for *wain*; *gwared*, for *guard*, which in English is *ward*, Sp. *guarda*. In some instances, the *u* or *w* is dropped in modern writing, as in the French *garenne*, a *warren*; *garde*, for *guard*. This difference of orthography makes it difficult, in some cases, to ascertain the true radical letters.

### CHANGE OF SIGNIFICATION.

Another cause of obscurity in the affinity of languages, and one that seems to have been mostly overlooked, is, the change of the primary sense of the radical verb. In most cases, this change consists in a slight deflection, or difference of application, which has obtained among different families of the same stock. In some cases, the literal sense is lost or obscured, and the figurative only is retained. The first object, in such cases, is to find the primary or literal sense, from which the various particular applications may be easily deduced. Thus, we find in Latin, *libeo*, *libet*, or *libeo*, *libet*, is rendered, to please, to like; *libens*, willing, glad, cheerful, pleased; *libenter*, *libenter*, willingly, gladly, readily. What is the primary sense, the visible or physical action, from which the idea of *willing* is taken? We find, either by knowing the radical sense of *willing*, *ready*, in other cases, or by the predominant sense of the

elements *lib*, as in Lat. *labor*, to slide, *liber*, free, &c., that the primary sense is to move, incline or advance toward an object, and hence the sense of willing, ready, prompt. Now this Latin word is the English *love*, German *lieben*, *liebe*. "Iubet me ire," I *love* to go; I am inclined to go; I go with cheerfulness; but the affinity between *love* and *libeo* has been obscured by a slight difference of application, among the Romans and the Teutonic nations.

Perhaps no person has suspected that the English words *heat*, *hale*, and *hest* are all radically the same word. But this is the fact. Sax. *hatian*, to heat, or be hot, and to hate; *hælan*, to heat and to call; *hatan*, to call, to order, to command; *ge-hælan* or *ge-hatan*, to grow warm, to promise, to vow; Gothic *gahaitan*, to call, to promise; Dutch *heeten*, to heat, to name, to call, bid or command; German *heizen*, to heat; *heissen*, to call; *hitzen*, to heat, to hoist; Swedish *hetsa*, to inflame, to provoke; Danish *heder*, to heat, to be called. *Behest*, we have from the German or Swedish dialect. *Hvat* coincides with the Latin *astus* for *hastus*, which is written with *s*, like the German. *Hate* coincides with the Latin *odi*, *osus*, so written for *hodi*, *hosus*, and as the Teutonic *h* often represents the Latin *c*, as in *horn*, *cornu*, the Danish orthography, *heder*, coincides with the Latin *cito*, to call. Now what is the radical sense? Most obviously to stir, agitate, rouse, raise, implying a driving or impulse; and hence in Latin *astuo*, to be hot, and to rage or storm; hence to *excite*, and hence the sense of the Latin *cito*, quickly, from stirring, rousing to action. In this case *hated*, as well as *heat*, is violent excitement. We find also in the Saxon and Gothic the sense of vowing, that is, of driving out the voice, uttering, declaring, a sense allied to calling and commanding, and to this is allied the sense of the Latin *recto*, to rectify.

In English, *heful* signifies to fall on, to happen to; in German, the same word, *befallen*, has the like signification. But in Saxoa, *gefeallan* signifies to fall, to rush on; while in German, *gefallen* signifies to please, that is, to suit, to come to one's mind, to be agreeable. The Danish *gefælder* has the same signification as the German.

We find by the Saxon, that the English *reck*, to care, and *recon*, and the Latin *rego*, to rule, are all the same word, varied in orthography and application. To find the primary sense of *reck*, to care, we are then to examine the various derivative senses. And we need go no further than to the Latin *rectus* and English *right*, the sense of which is *straight*, for this sense is derived from *straining*, *stretching*. Care, then, is a *straining of the mind*, a stretching toward an object, coinciding with the primary sense of *attention*. The primary sense of *recon* is to strain out sounds, to speak, tell, relate; a sense now disused.

The Saxon *cerc*, care, *cercian*, to care, to cark, is connected in origin with the Latin *carcer*, a prison; both from the sense of straining, whence holding or restraint.

To prove how the primary general sense of a word may ramify into different senses, by special appropriation of the word among separate families of men proceeding from the same stock, let us observe the different senses in which *leap* is used by the English, and by the nations on the continent. In English, to *leap* is simply to spring; as, to *leap* a yard; to *leap* over a fence. But on the continent it signifies to *run*. Now it will be seen that this word, as used by the Germans, can not always be translated by itself, that is, by the same word, into English. Take for illustration the following passage from Luther's Version of the Scriptures: 1 Sam. xvii. 17. "Nimm für deine bruder diese epha sangen, und diese zehen brod, und lauff ins heer zu deinen brüdern;" "Take now for thy brethren an ephah of this parched corn, and these ten loaves, and *leap* to the camp of thy brethren." *Leap*, instead of *run*, is good German, but bad English.\* There are two other words in this passage, of which a like remark may be made. The German *brod*, loaves, is our *bread*, which admits of no plural; and *sangen* is our *singed*, which we can not apply to parched corn.

So in some of the Teutonic languages, to *warp* kittens or puppies, to *warp* eggs, is correct language, though to our ears very odd; but this is only a particular application of the

\* He walks, he leaps, he runs.—Cooper.

## INTRODUCTION.

primary sense, to *throw*. We say to *lay* eggs, but to *lay* is to *throw* down.

By this comparison of the different uses and applications of a word, we are able, in most cases, to detect its original signification. And it is by this means, we apprehend, that we may arrive at a satisfactory explanation of the manner in which the same word came to have different and even opposite significations.

It is well known, for example, that the Hebrew word בֵּרַךְ *borak*, is rendered, in our version of the Scriptures, both to *bless* and to *curse*. The propriety of the latter rendering is controverted by Parkhurst, who labours to prove, that in Kings and in Job, where it is rendered to *curse*, it ought to be rendered to *bless*; and he cites, as authorities, the ancient versions. It is true that in 1 Kings xxi. 10, 13; and in Job i. 11, and ii. 5, the Seventy have rendered the word by εὐλογῶ, to *bless*; and other ancient versions agree with the Septuagint. But let the word be rendered by *bless* in the following passages: "Put forth thy hand now, and touch his bone, and his flesh, and he will *bless* thee to thy face." "*Bless* God and die." How very absurd does such a translation appear! It shows the immense importance of understanding the true theory of language, and the primary sense of radical words. Let us then endeavour to discover, if possible, the source of the difficulty in the case here mentioned. To be enabled to arrive at the primary sense, let us examine the word in the several languages, first of the Shemitic, and then of the Japhetic stock.

Heb. בֵּרַךְ, to *bless*; to *salute*, or *wish a blessing* to.

2. To *curse*; to *blaspheme*.

3. To *crouch* or *bend the knee*, to *kneel*.

Deriv. A *blessing*, and the *knee*.

Chaldee, בֵּרַךְ, to *bless*; to *salute* at meeting, and to bid farewell at parting.

2. To *bend the knee*.

3. To *dig*; to *plow*; to *set slips of a vine or plant for propagation*.—*Talm.* and *Rabbin*.

Deriv. The *knee*; a *blessing*; a *cursing*; a *scion*; the *young of fowls*.

Syriac, ܒܪܟܬܐ, to *fall on the knees*; to *fall* or *bow down*; Judg. v. 27.

2. To *issue* or *proceed from*; Matt. xv. 19.

3. To *bless*.

Samaritan, ܒܪܟܬܐ, to *bless*.

Ethiopic, ብርክ, to *bless*. Deriv. the *knee*.

Arabic, برك *baraka*, to *bend the knee*; to *fall on the breast*, as a *camel*.

2. To be *firm*, or *fixed*.

3. To *rain violently*, to *pour forth rain*, as the *clouds*. Gr. βρέχω.

4. To *detract from*; to *traduce*; to *reproach* or *pursue with reproaches*; to *revile*.

5. To *bless*; to *pray for a blessing on*; to *prosper*; to be *blessed*.

6. To *hasten*; to *rush*, as on an *enemy*; to *assail*.

Deriv. The *breast*; the *basin of a fountain*; a *fishpond*, or *receptacle of water*, as in Heb. and Ch.; also *increase*; *abundance*; *constancy*; *splendour*; a *flash of light*.

In the latter sense, usually from برك Heb. and Ch. בֵּרַךְ *baraka*.

The Arabic word supplies us with the certain means of determining the radical sense; for among other significations, it has the sense of *pouring forth rain*; and this is precisely the Greek βρέχω. The primary sense then is to *send*, *throw*, or *drive*, in a *transitive* sense; or in an *intransitive* sense, to *rush*, to *break forth*.

To *bless* and to *curse* have the same radical sense, which is, to *send* or *pour out words*, to *drive* or to *strain out the voice*, precisely as in the Latin *appello*, from *pello*, whence *peal*, as of *thunder* or of a *bell*. The two senses spring from the *appropriation* of loud words to express particular acts. This depends on usage, like all other particular applications of one general signification. The sense in Scripture is to *utter words*

either in a *good* or *bad* sense; to *bless*, to *salute*; or to *rail*, to *scold*, to *reproach*; and this very word is probably the root of *reproach*, as it certainly is of the Latin *precor*, used, like the Shemitic word, in both senses, *praying* and *cursing*, or *deprecating*.\* It is also the same word as the English *pray*, It. *pregare*, L. *precor*, the same as *preach*, D. *precken*, W. *pregethu*. To the same family belong the Gr. βραχμα, βραχμαται, to *bray*, to *roar*, to *low*, Lat. *rugio*. Here we see that *bray* is the same word, applied to the voice of the ass and to *breaking* in a *mortar*, and both are radically the same word as *break*.

The sense of *kneeling*, if radical, is to *throw*, and if from the noun, the sense of the noun is a *throwing*, a *bending*.

The Chaldee sense of *digging*, if radical, is from *thrusting* in an instrument, or *breaking* the ground; but perhaps it is a sense derived from the name of a shoot or scion, and in reality, to *set a shoot*, to *plant*.

The Syriac use of this word in Matt. xv. 19, is *intransitive*, to *issue*, to *shoot*, or *break forth*. So in Arabic, to *rush on*, to *assault*. The sense of *firmness* in Arabic is from *setting*, *throwing down*, as in *kneeling*; and hence the sense of *breast*, the *fixed*, *firm* part.

That this word has the sense both of *blessing* and of *cursing*, or *reproaching*, we have demonstrative evidence in the Welsh language. *Rhêg*, in Welsh, is בֵּרַךְ without the prefix. It signifies a *sending out*; *utterance*; a *gift* or *present*; a *consigning*; a *ban*, a *curse* or *imprecation*. *Rhêgu*, to *give*; to *consign*; to *curse*. From *rhêg* is formed *preg*, a *greeting*, or *salutation*, [the very Hebrew and Chaldee word,] *pregeth*, a *sermon*, and *pregethu*, to *preach*. Here we have not only the origin of *preach*, but another important fact, that *preg*, and of course בֵּרַךְ is a compound word, composed of a prefix, *p* or *ð*, and *rhêg*. But this is not all; the Welsh *greg*, a *cackling*, *gregar*, to *cackle*, is formed with the prefix *g* on this same *rhêg*. [Dan. *krage*, a *crow*.]

In Welsh, *brengu* signifies to *break*; *brêg*, a *breach*, a *rupture*. This Owen deduces from *bar*, but no doubt erroneously. It is from *rhêgu*, and there is some reason to think that *break* is from *rhêg*, rather than from ברק but probably both are from one radix, with different prefixes.

We observe one prominent sense of the Arabic برك *baraka*, is to *rain violently*; to *pour forth water*, as *clouds*. This is precisely the Greek βρέχω; a word found in all the Teutonic and Gothic languages, but written either with or without its prefix.

Saxon, *regn* or *rygn*, *rain*; *regnan*, to *rain*.

Dutch, *regen*, *rain*; *regenen*, *berregenen*, to *rain upon*.

German, *regen*, *rain*; *regnen*, to *rain*; *berregnen*, to *rain on*.

Swedish, *regna*, to *rain*.

Danish, *regn*, *rain*; *regner*, to *rain*.

Saxon, *racu*, *rain*; Cimblic, *rakia*, id.

Here we find that the English *rain*, is from the same root as the Welsh *rhêg*, *rhêgu*, and the Shemitic בֵּרַךְ.

Pursuing the inquiry further, we find that the Saxon *reccan*, or *reccan*, [W. *rhêgu*,] signifies to *speak*, to *tell*, to *relate*, to *reckon*, the primary sense of which last is to *speak* or *tell*; also to *rule*, which shows this to be the Latin *rego*; also to *care*, which is the English *reck*. That this is the same word as *rain*, we know from the Danish, in which language *regner* signifies both to *rain* and to *reckon*, to *tell*, to *count* or *compute*. In the German, the words are written a little differently; *rechnen*, to *reckon*, and *regnen*, to *rain*. So in Dutch, *rekenen* and *regnen*; but this is a fact by no means uncommon.

Here we find that the English *reckon* and *reck*, and the Latin *rego*, are the same word. The primary sense is to *strain*, to *reach*, to *stretch*. Care is a *stretching* of the mind, like *attention*, from the Latin *tendo*, and restraint is the radical sense of governing. Hence *rectus*, *right*, that is, *straight*, *stretched*.

Hence we find that *rain* and the Latin *regnum*, *reign*, are radically the same word.

Now in Saxon *racan*, or *reccan*, is the English *reach*, to *stretch* or *extend*, from the same root, and probably *reck*,

\* "Improbis urget iratis precibus."—Horace.

# INTRODUCTION.

Saxon *recan*, *reocan*, to fume or smoke; for this is to send off.

We might have mentioned before, that the Chaldee *בִּרְיָה* a scion or branch, is precisely the Celtic word for arin; Irish *braic*, or *raigh*; Welsh *braig*; whence the Greek *βραχίον*, the Latin *brachium*, whence the Spanish *brazo*, whence the French *bras*, whence the English *brace*. The arm is a shoot, a branch, and *branch* is from this root or one of the family, *n* being casual; *branch* for *brach*.

On this word let it be further observed, or on *בִּרְיָה* or *בִּרְיָה* if radically different, are formed, with the prefix *s*, the German *sprechen*, to speak, *sprache*, speech; Dutch *spreken*, *spraak*;

Swedish *spraka*, *språk*; Danish *sprog*, speech; and Swedish *spricka*, to break; Danish *sprekker*. The same word with *n* casual is seen in *spring*, the *breaking* or opening of the winter; and here we see the origin of the marine phrase, to *spring* a mast, Danish *springer*, to burst, crack or spring. This in Swedish is written without *n*, *spricka*, to break, burst, split; but a noun of this family has *n*, *springa*, a crack, and *spring*, a spring, a running.

Now let us attend to other Shemitic words consisting of cognate elements.

Chaldee, *פִּרַק* *frak*, to rub or scrape; to rub out or tread out, as grain from the ear or sheaf; Latin *frico*, *fruo*.

2. To collect and bind, as sheaves; perhaps English, to *rake*.

3. To break or break down.

4. To question; to doubt. In Saxon and Gothic *f. agnan*, *fragan*, signifies to ask.

Deriv. Forward; perverse; Prov. ii. 12. So in English *refractory*.

This verb is not in the Hebrew; but there are two derivatives, one signifying the inner veil of the temple; so called probably from its use in *breaking*, that is, interrupting access, or separation, like *diaphragm* in English. The other derivative is rendered *rigour*, or cruelty; that which strains, oppresses, breaks down, or *rakes*, harasses.

With this verb coincides the Irish *bracaim*, to break, to narrow, that is, to *rake*.

Syr. *ܦܪܩ* *frak*, to rub, so rendered, Luke vi. 1. Lat. *frico*.

A derivative signifies to comminute.

Deriv. Distortion; winding; twisting. Let this be noted.

Ar. *فرك* *fraka*, to rub, Lat. *frico*.

2. To hate, as a husband or wife; to be languid, or relaxed.

Deriv. Laxity; frangibility; friability.

Heb. *פָּרַק* *parak*, burst, or rend; to break off; to separate.

Deriv. A *breaking* or parting of a road.

Ch. *פָּרַק* *parak*, to break.

2. To redeem, that is to free, separate or deliver.

3. To explain, as a doubtful question.

Deriv. One who ransoms or delivers; a rupture; the neck or its juncture; a joint of the fingers, &c.; the ankle; the joint of a reed; a chapter or section of a book; explanation; exposition. *פָּרַק* a rupture, coinciding with the English *broke*.

Syr. *ܦܪܩ* *frak*, to redeem.

2. To depart; to remove; to separate.

Deriv. A recess, or withdrawing; separation; liberation; redemption; safety; vertebra.

Sam. The same as the Syriac verb.

Ar. *فارق* *faraka*, to separate; to divide; to withdraw; to disperse; [qu. Lat. *spargo*.] to lay open; to disclose; to cast out; to immerse.

Deriv. Separation; distinction; distance; interval; dispersion; aurora, as we say, the *break* of day; also, a garment reaching to the middle of the thigh, qu. *frock*; also *breach*.

We have placed these two words together, because we are convinced they are both of one family, or formed on the same radical word. The latter coincides exactly with the Latin *frango*, *fregi*, *fractum*, for *n* in *frango* is undoubtedly casual. Now in Welsh *bregu*, to break, would seem to be directly connected with *בִּרְיָה* yet doubtless *bregu* is the English *break*, the

German *brechen*, the Dutch *brecken*, &c. In truth, the three words *בִּרְיָה*, *פָּרַק* and *פָּרַק* are probably all from one primitive root formed with different prefixes, or rather with the same prefix differently written; the different words bearing appropriate senses, among different tribes of men.

We observe in the Chaldee word the sense of questioning. Perhaps this may be the Gothic *fragan*, to ask, and if so, it coincides with the Latin *rogo*, the latter without the prefix. In the sense of *break*, we find, in the Greek, *φραγεω*, without a prefix.

Most of the significations of these verbs are too obvious to need illustration. But we find in the Syriac the sense of distortion, a sense which at first appears to be remote from that of *breaking* or *bursting asunder*. But this is probably the primary sense, to strain, to stretch, a sense we retain in the phrase, to *break* upon the wheel; and by dropping the prefix, we have the precise word in the verb, to *rack*.

Now if this is the genuine sense, we find it gives the English *wreck* and *wrack*, the Danish *vrag*, Sw. *vrak*, a wreck. In Saxon, *wreacan*, *wreacan*, is the English *wreak*, that is, to drive, or throw on; *wrace*, is an exile, a *wretch*. In Dan. *vrag*

signifies to reject; Sw. *vraka*, to throw away; all implying a driving force, and that *wreck* is connected with *break*, is probable for another reason, that the Latin *fractus*, *frango*, forms a constituent part of *navfragium*, the English *shipwreck*, which in Danish is simply *vrag*.

Now if *straining*, *distortion*, is one of the senses of this

root, the English *wring*, *wrong*, Danish *vrang*, Sw. *vrang*, may be deduced from it, for undoubtedly *n* is not radical in these words. The Dutch has *wringen*, but the German drops the first letter and has *ringen*, both to twist or wind, and to ring or sound; the latter sense from straining or throwing, as in other cases. Without *n*, *wring* would be *wrig*, and *wrong*, *wreg*; *wrang*, *wrag*, Dan. *vrag*.

In Greek, *φραγος* is a blanket or coverlet, and connected with *φραγεω*; that is, a spread, from stretching, or throwing over.

We find also among the Chaldee derivatives the sense of a neck, and a joint. Now we find this word in Irish, *braigh*, the neck; in Greek, without the prefix, *παγος*, the spine of the back; Saxon, *hracca*; English, the *rack*, and, from the Greek, the *rickets*, from distortion.

Coinciding with the Greek *φραγεω*, to break, we find in Welsh *rhugaw*, to rend; and coinciding with *παγος*, a *rock*, a *crag*, Welsh *craig*, and connected with these, the Saxon *hracod*, English *ragged*, that is, broken; evidently the participle of a verb of this family.

Hence we find the senses of *distortion* and *breaking* connected in this root, in a great variety of instances.

The Shemitic *בִּרְיָה*, to lighten, to shine or flash, is one of this family. The sense is, to shoot or dart, to throw, as in all like cases. And under this root, the Arabic has the sense, to adorn, as a female; to make bright or shining; which gives the English *prank* and *prink*, D. *pragt*, G. *pracht*. *France* is of the same family, from leaping, starting, darting up.

In Greek *βραχυς*, short, stands in the Lexicons as a primary word or root. But this is from the root of *break*, which is lost in Greek, unless in *φραγεω*, without the prefix. From *βραχυς*, or the root of this word, the French language has *abridge*, to *abridge*; and what is less obvious, but equally certain, is, that from the same root the Latin has *brevis*, by sinking the palatal letter, as we do in *how*, from *bogan*, and in *lay*, from *legan*; so that *abridge* and *abbreviate*, *brief*, are from one root.

It should have been before mentioned that the Latin *refragor* signifies to resist, to strive against, to deny, whence *refractory*; a sense that demonstrates the primary sense to be, to strain, urge, press; and *refraction*, in *optics*, is a *breaking* of the direct course of rays of light by turning them; a sense coinciding with that of *distortion*.

We see then that one predominant sense of *break*, is, to strain, to distort. Let us now examine some of the biliteral roots in *rg* and *rk*, which, if *b* is a prefix, must be the primary elements of all the words above mentioned.

Ch. *רָגַג* *rag*, *ragag*, to desire, to long for. This is the Greek *αγειν*, and English to *reach*; for desire is expressed by

## INTRODUCTION.

reaching forward, stretching the mind toward the object. So in Latin *appeto* and *expeto*, from *peto*, to move toward. This coincides nearly with the Latin *rogo*, to ask, and the Goth. *fragan*, Sax. *fragan*.

Syr. **ܐܪܝܐ**, to desire; and with olaph prefixed, **ܐܪܝܐܐ** to desire, or long; also to wet, or moisten; also **ܐܪܝܐܐ**, to moisten — Latin *irigo*, *irrigo*, to irrigate.

Deriv. Tender, soft, fresh, from moisture or greenness.  
Qu. Lat. *recens*, a derivative.

Here *desire* and *irrigation* are both from one root; desire is a reaching forward, and irrigation is a spreading of water.

This root, in Hebrew **סָחַח**, signifies to weave, or connect as in texture and net-work; but the primary sense is to stretch or strain.

In Arabic, the same verb <sup>أَباحَ</sup> **أَباحَ** signifies to emit an agreeable smell; to breathe fragrance; radically, to throw or send out; to eject; a mere modification of the same sense. This is the Latin *fragro*, whence *fragrant*, with a prefix; but according exactly with the English *reek*.

**Ṭ** in Ch. Heb. Syr. and Sam., signifies to prolong, to extend. In Ar. as in Heb. in Hiph. to delay, or retard; that is, to draw out in time.

בָּרַךְ in Heb. has been differently interpreted; indeed, it has been rendered by words of directly contrary signification. The more modern interpreters, says Castle, render it, to split, divide, separate, or break; the ancient interpreters rendered it, to stiffen, to make rigid or rough, to wrinkle or corrugate. Castle and Parkhurst, however, agree in rendering it, in some passages, to quiet, still, allay; Jer. xlvii. 6; 1. 34. In Job vii. 5, our translators have rendered it *broken*, "My skin is broken," [rough, or rigid.] In Job xxvi. 12, it is rendered by *divide*, "He divideth the sea by his power." In Vanderhooght's Bible it is in this place rendered by *commove*, he agitates the sea. The Seventy render it by *καταπαύει*, he stilled; and this is the sense which Parkhurst gives it.

In Isaiah li. 15, and Jer. xxxi. 35, it is rendered in our version by *divide*. "But I am the Lord thy God, that *divided* the sea, whose waves roared."

In Vanderhooght's Bible it is rendered in Isaiah li. 15, "I am Jehovah thy God, *qui commovens mare, ut perstrepant fluctus ejus.*" In Jer. xxxi. 35, "*commovens mare, ut tumultuentur fluctus*"—agitating or moving the sea, that the waves roar, or may roar. The passage in Isaiah is rendered by the Seventy, *οτι ο θεος σου, ο παρασκευη την θαλασσαν, και ηχη τα κυματα αυτης*, "agitating the sea, and causing its waves to roar and resound." In the French translation, the passage in Isaiah is, "*qui fend la mer, et ses flots bruient.*" [1] who divide the sea, and the waves roar. In Jeremiah the passage is, "*qui agite la mer, et les flots en bruient.*" who agitates the sea, and therefore the waves roar. In Italian, the passage in Isaiah is rendered, "*che muovo il mare, e le sue onde romoreggiano.*" In Jeremiah, "*che commuovo il mare, onde le sue onde romoreggiano.*" who moveth the sea, therefore its waves roar, or become tumultuous.

These different renderings show the importance of understanding the literal or primary sense of words; for whatever may be the real sense in the passages above mentioned, it cannot be to *divide*. If we are to give to *vau* in the following word, its usual sense of *and*, it is difficult to make sense of the word *וַיִּבֹּא*, by translating it, *he stilleth: He stilleth the sea and its waves are tumultuous*, or *He stilleth the sea that the waves may roar or be agitated!* This will not answer. The more rational version would be, *He roughens the sea, and its waters roar*; or he drives, impels it into agitation. In Ethiopic, the same word signifies to coagulate, to freeze, to become rigid; and this is undoubtedly the Latin *rigeo*, and with a prefix *frigeo*, and this signification is perhaps allied to the Lat. *rugō*, to wrinkle; for as a general rule, the radical sense of wrinkle is to draw, as in *contract*, *contraho*, and this seems to be the sense of *rigeo*. Both these words are allied to *rough*, which is from breaking or wrinkling. This sense would perhaps well suit the context in these two passages, as it would also that in Job vii. 5: *My skin is rough*.

Now in Arabic, the general signification of *yaʿ* is to return, to repeat, to withdraw, which may be from drawing back; a different application of the original sense, to strain, stretch, or extend.

The root  $\text{pr}$  in Chaldee signifies to spit, and this is probably the Latin *ructo*, somewhat varied in application. The same

verb in Arabic رَأَى *rauka*, signifies to drive off, to reject; to shoot or grow long, as teeth; to strain, purify, or make clear, as wine; precisely the English to *rack*; also to spread, and to pour out. Hebrew פָּרַק, to empty, to draw out, to attenuate or make thin; and as a noun, spittle; Syriac, to spit, to draw out, to attenuate; Samaritan, to pour out, to draw out, to extend; Ethiopic, to be fine, slender, or thin; Arabic, to be soft, tender, thin. The verb פָּרַק has a like signification, and is perhaps from the same original root; שָׁרַק, Hebrew, to spread, stretch, extend. But, says Castle, all the ancient interpreters rendered the word, to ordain, establish, make firm; to strike, to beat, as plates of metal. But the sense is to stretch, to spread, and the beating is only the means of extending. Hence שָׁרַק, the firmament, which agrees well with Lat. *regio*, an extent; in Hebrew, properly, an expanse. And to reconcile the ancient and modern interpretations of this word, let it be remembered that *strength* and *firmness* are usually or always from *stretching, tension*.

Now let us hear Ainsworth on the word *regio*. "*Regio* a *rego* quod priusquam provincie fierent, regiones sub regibus erant atque ab his regebantur." How much more natural is it to deduce *regio* from the primary sense of *rego*, which is to stretch, to strain, to extend! *Regio* is an extent, a word of indefinite signification.

In Chaldee and Arabic this verb signifies to mend, to repair, to make whole, from extending, spreading over, or making strong. See the root כב, *infra*.

We observe that *רעך* and *רגע* agree, in original signification, with the English *reach*, on the root of which, or some of its derivatives, was formed *stretch*. That *רעך* and *רגע* are biliteral roots, we may not be able to affirm; but it is certain from the Welsh, that the first consonant of the triliteral root is a prefix, and it is certain, from the Semitic languages, that the primary sense is the same in the biliteral and triliteral roots, or that all the applications or particular significations may readily be deduced from one general signification.

To illustrate this subject more fully, let us attend to the various applications of some other Sheinitic words of extensive use.

**ברא.**

Heb. ברא *bara*, to create. This, by most lexicographers, is given as the first signification in all the Shemitic languages. Parkhurst says, to create: to produce into being: Gen. i. 1.

2. To form by accretion or concretion of matter; Gen. i. 21.
3. In Hiph. to make fat; to fatten or batten; 1 Sam. ii. 29.
4. To do or perform something wonderful; Num. xvi. 30.
5. In Niph. to be renewed. In Kal. to renew, in a spiritual sense; Ps. li. 12.

1. To create from nothing, or to produce something new or excellent from another thing; Gen. i; Is. xliii. 5.

2. In Niph. to be renewed or re-created; Is. xlviii. 7; Ps. cii. 19.

3. To cut off; to take away; to *bear* away, or remove; also to select; to prepare: Josh. xvii. 15, 18: Ezek. xxiii. 47.

1. Strictly, to hew, to hew out. [Ar. to cut, to cut out, to plane.]

2. To form; to make; to produce. Ar. **بَرَأَ**. The order

of significations is, as in the Ar. خلق *galaka*, to be smooth, to make smooth. 2. To plane. 3. To form, make; Gen. i. 1, 21, 27.

1. Niph. passive of Kal. No. 2; Gen. ii. 4.
2. To be born; Ezek. xxi. 30; Ps. cii. 18.

## INTRODUCTION.

Pi. פָּרַע, the verb differently pointed; to hew, to cut down; Josh. xvii. 15, 18.

2. To cut down with the sword; to kill; Ezek. xxiii. 47.

3. To make fat; 1 Sam. ii. 29.

Thus far the Hebrew.

Chal. פָּרַע, to create; Gen. i. 1.

2. To cut off; Is. xl. 20.

3. To make fat; to grow sound or strong. Talm.

Deriv. Fat; whole; sound; strong. *Castle.*

Syr. ܦܪܥ, to create; Gen. i. 1; Mark xiii. 19.

2. To remove to a distance; and Deriv. distance, distant.

*Castle.*

Sain. ܦܪܥ, to create; Gen. i. 22; Deut. iv. 32. *Castle.*

Ar. ٱَرَّ, to create; Job xxxviii. 7. [qu. 4 and 6.]

2. To be free, or guiltless, not obnoxious to punishment; Num. v. 28, 31; and xxxii. 22; Rom. vii. 6.

3. To free; to absolve from a crime; to liberate; to dismiss; to justify; Ex. xx. 7; Num. xiv. 18.

4. To escape; to forsake.

5. To recover from disease; to be healed; to restore to health; Lev. xiii. 18; Josh. v. 8; Matt. iv. 23.

6. To cleanse; to free from impurities.

7. To abstain from.

Deriv. Creator; free; unobnoxious; clean; empty.

Ar. ٱَرَّ, to create.

2. To cut off; to hew or *pare*.

3. To separate; to distinguish.

4. To make thin.

5. To oppose; to strive; to resist.

6. To provoke; to boast, or make a parade.

7. To distribute; to disperse. *Castle.*

According to Gesenius, the primary sense of the verb is to *hew*, to *cut out*, and thus to make smooth, and thus to create; and he deduces these senses in the same order as he does those of the Arabic verb, which gives the word *like*. But there is no ground for this opinion; and doubtless the verb originated before the use of edge tools.

The predominant senses of this word are, to separate, to free, to remove; as we see by the Arabic and Syriac.

Now *hew*ing is indeed separating, and we have the English word *pare* from this root; but we must seek for a signification which is more general than that of *paring*, or we shall not be able to account for the sense of making fat, sound, entire, and strong, nor for that of being born.

The truth undoubtedly is, this word is of the same family with the English *bear*, the Latin *pario*, and the radical sense is to *throw*, to *thrust*, to *send*, to *drive*, to *extend*; hence to throw out, to produce, as applied to the birth of children or of the world. To *throw* or *drive*, is the primary sense of separation and division, that is, to drive off. The English word *deal*, when traced to its root, presents the same fact. See *Deal*. To *create*, is to *produce* or *bring forth*, the same sense as that of *birth*, applied to a different object. The sense of *hew*ing and *paring* is from driving off, separation. In Syriac, we observe the general application, in *removal*, or *departure* to a distance. The sense of fattening is derivative, and allied to that of healing or making whole, sound, strong, in the Arabic; that is, preparing, bringing to a good state, or from tension, the usual primary sense of strength and power.

To obtain a more full and satisfactory view of this subject, let us attend to the same word in the modern languages of Europe.

### LATIN.

*Paro*, to prepare, make ready, procure, design, &c. The radical sense of *paro* is probably the same as in the Shemitic languages; to produce, to bring forward. So also *ready* implies an advancing, and so does *promptness*. But the various ways of preparing a thing for use naturally give to the word, in process of time, a variety of particular significations; each of which results in bringing the thing to the state desired.

xviii

The compounds of *paro*, are *apparo*, to prepare, to furnish, accoutre, or set out; *comparo*, to prepare or procure, to make equal, to compare, to join, to dress or make ready; *praparo*, to prepare; *reparo*, to repair, to create anew, to regain, to compensate; *separo*, to separate. Let the Latin uses of this word be compared with the same Hebrew word in Joshua xvii. 15, where it is rendered *cut down*. "Ascend to the wood country and cut down for thyself;" Septuagint, *καταβαντες* *εαυτου*, clear for thyself. This is one mode of preparation for use. In Ezek. xxi. 19, it is rendered choose; Septuagint, *διαταξας*, appoint.

*Par*, something contiguous, or that is in continuity; a state of readiness or preparedness; a *pair* or couple; a fellow, match.

*Pdr*, a cause; the essence, germ, or seed of a thing; a *peer*.

*Para*, to continue, to endure, to persevere.

*Pwrad*, a causing; *parrai*, that causes to be.

*Parawed*, prepared, ready; *parodi*, to prepare.

That all the foregoing words in the present European languages, [and several others might have been added,] are formed from one stock or radix, coinciding with the Latin *paro*, is a fact that admits of no question. The only doubt respecting the correctness of the whole preceding statement, is, whether the Latin *paro* is radically the same as the Oriental *par*; and with regard to this point, we should suppose the evidence to be convincing. Indeed, there is good reason to believe that the Oriental verbs *par*, *pari*, *pari*, and *pari*, are all formed from one primitive radix. Certain it is that the English *bear* comprehends both the Latin *fero* and *pario*, and the latter corresponds nearly with *par* and Eth. *ἄρῃ fari*, to bear.

But admitting only what is certain, that all the foregoing European words are from one radix, we are then to seek for a primary meaning from which may be deduced the following significations; Lat. to *prepare*; Ital. to adorn, to *parry*, to stop, to defend, to *repair*, to learn; Span. to *prepare*, to stop, to lay or stake as a wager, a *pair* or couple; Port. to stop, to confine upon or be contiguous, to drive or aim at, to *parry*, to *pare*; Fr. to deck, to *parry*, to stop, to *pare*; Arm. to dress, to *prepare*, to *parry*; Russ. to adjust, to dress, to mow or reap; Welsh, *preparredness*, contiguity, a *pair*, a cause, to continue or endure; and several other significations.

The various significations result from throwing, sending, driving. To separate or remove, is to drive or force apart; hence to *parry*, and hence to defend. Separation implies extension, a drawing out in length or time; hence the Portuguese senses of confining upon, reaching to the limit. This

gives the sense of *par*, equal, that is, of the same extent, and hence coming to, and suiting, as in Latin *convenio*.

Here let it be observed, that admitting the word *par*, equal, to belong to this family, as in the Welsh, we have strong reason to believe that the Shemitic *par*, to join, or fit together, to associate, whence as a noun, an associate, is formed from the same root, or *par*; for in the Saxon we find not only *fera*, but *gefera*, a companion, fellow, or *peer*; *gefera*, answering precisely to the Oriental word.

The sense of betting is from throwing down, as we say, to *lay* a wager. The sense of stopping is from setting, fixing, or from *parrying*. The sense of adorning is from putting on, which is from sending, or from extension, enlargement, as we say, to *set off*, and hence it is allied to the sense of show, display, *parade*. Preparation is from producing, bringing forward, or adjusting, making right; and often implies advancing, like *ready*, *prompt*, and the latter word, *prompt*, from *promo*, to bring forth, affords a good illustration of the words derived from *paro*.

The senses of cutting off, *paring*, and the like, require no explanation.

The Italian *disparare*, and the Spanish and Portuguese *disparar*, to discharge fire-arms, present the original sense of the root, to send or drive. This sense gives that of the Welsh *par*, a spear, as well as a cause, or that which impels. A *spear* is a shoot, from the sense of thrusting; and our word *spear* is probably formed from the root of *bar*, and Welsh *ber*, a spit, a pike, a lance, a spear, Lat. *versu*. Now in Chaldee, a *bar* is *bar*, from *par*, to pass, a verb which is probably of the same family with *par*. It is further to be observed that in Italian, *bar* is written both *barra* and *sharra*.

It is observed above that *par* is the English *bear* and the Latin *pario*; but *pario* would seem to be the Hebrew *parah*, to be fruitful, to bear fruit, applied to plants and animals. But this word seems to denote producing in general, rather than the production of children. However this may be, it is certain that *bear* in English, as well as in Saxon, expresses the sense of both *pario* and *fero* in Latin. The Latin *fero*, and the Greek *φωω*, signify both to carry and to produce, as young or fruit. *Pario*, does not. So in the Gothic, *bairan* is to carry, *gabairan* is to carry and to produce young. In German, *führen* is to carry, and *gebären*, to bring forth, to bear a child. In Dutch, *beuren* is to lift; *voeren*, to carry; and *baaren*, to bring forth, as children, to bear, to beget, to cause. Danish, *baerer*, to carry, to support, and to yield or

produce. Sw. *bära*, to carry; *barn*, a son. Irish *beirim*, to bear or bring forth, and to tell or relate, like the Latin *fero*, whence Fr. *parler*, to speak.

It appears then that the English *bear*, and the Saxon from which we have received it, and the Gothic and the Danish corresponding words unite, in the same orthography, the senses of two words of different orthography in other languages. We have found other examples of a similar kind. There is, therefore, solid ground to believe that all these words are from one primitive root; the different modes of writing the word, and the several appropriations, having originated in different families of the great races of men, before languages were reduced to writing; and when they came to be written, each word was written according to its usual pronunciation, and defined according to its use in each family. And by the intermixture of tribes, two or three derivatives of the same stock might have become a part of the same national language. Unquestionably the Greek *φωω*, and *φωω*, are branches of the same stock.

We have, in the modern languages, decisive evidence that different verbs may have, and in fact have a common radix. Thus in English *list* and *lust* are different modes of writing the same word; both are united in the other Teutonic dialects. So in Latin *libet* and *lubet*; and similar instances we have found in almost every language which we have examined.

The Latin *pareo*, to appear, to come to light, if not a compound word, may be of this family. *Paries*, a wall, if primarily a partition wall, is of the same stock. *Per* belongs to this family, as its signification is *passing*. The Sax. *faran*, to fare, Gr. *φωω*, seems to be from one branch of this stock, probably *par*. See the word *Pass* in the Dictionary, in

## INTRODUCTION.

the derivative senses of which there are some resemblances to those of כָּפַר.

### כָּפַר *kafar*.

This verb, says Lowth, means to *cover*, to cover sin, and so to expiate; and it is never used in the sense of *breaking* or *dissolving* a covenant, though that notion occurs so often in the Scriptures; nor can it be forced into this sense, but by a great deal of far-fetched reasoning. See Isaiah xxviii. 18. *Lowth on Isaiah, Prelim. Diss.*

כָּפַר, says Castle, "texit, operuit, Anglice, to *cover*; per metathesin, *κεκρυμμενος*, peculiariter bitumine, sive glutinosa aliqua materia obduxit; picavit;" Gen. vi. 14.

Parkhurst gives to this verb the sense of *covering* or *overspreading*, as primary; and deduces from it the Greek *κεκρυμμενος*, and English *cover* and *coffer*. He, however, admits that in Isaiah xxviii. 18, it signifies to annul, as a covenant. He also considers the sense of atonement or expiation to be radically that of *covering*.

Gesenius agrees with the English lexicographers, in assigning to this verb the primary sense of *covering* or *overlying*, as in Gen. vi. 14. He admits that this word has the sense, in Isaiah xxviii. 18, of *blotting out*, *obliterating*. But he gives to it the sense of *forgiving*, in some passages, in which our version has that of *purging away*; Ps. lxxv. 3; and lxxix. 9. In these passages, Castle renders the word, to be *merciful* or *propitious*.

In all these authors there is, we conceive, a radical mistake, in supposing the primary sense to be to *cover*, and in the opinion that this Hebrew word is the English verb to *cover*. A still greater mistake is in the supposition of Castle and Parkhurst, that this, by a metathesis, gives the Greek *κεκρυμμενος*.

The English word *cover* comes to us through the French *couvrir*, from the Italian *coprire*, a contraction of the Latin *co-operio*, whence *co-operius*, Italian *coperto*, covered, Eng. *covert*.\* The Latin *aperio*, is to open, and *operio*, is to cover, both from *pario*, or one of the roots in *Br*, which has just been explained. The root in these words is *per* or *par*, and the sense is varied by prefixes; perhaps *ad-pario* or *ab-pario* and *ob-pario*. Now *cover* can have no connection with כָּפַר, unless this latter word is a compound, with כ for a prefix. This may be the fact, but the connection, even in that case, is very remote.

Let us see if we can gain any light upon the subject of the primary sense of כָּפַר from the cognate languages.

*Chaldee*, כָּפַר, to deny, to reject; Prov. xxx. 9.

2. To wipe; "She catcheth and *wipeth* her mouth;" Prov. xxx. 20.

3. To wash or cleanse; Matt. xxvii. 24.

*Castle.*

*Syriac*, ܕܟܦܪ *kafar*, to deny; Gen. xviii. 15; Luke xii. 9.

2. To wipe, to wipe away, to annul, to abolish; Prov. xxx. 20; Is. xxviii. 18.

*Castle.*

*Arabic*, كَفَرَ *kafara*, to deny; to disbelieve; to be an infidel; to be impious; to blaspheme; Acts iii. 13, 14; 2 Pet. ii. 1, 5; Jude 15.

2. To cover; to conceal.

3. To expiate; to make expiation for one, and free him from crime.

*Castle.*

Now the senses of the Chaldee, Syriac, and Arabic, to *deny*, to *reject*, to *annul*, to *wipe*, *wash*, or to *cleanse* by these acts, cannot be deduced from *covering*.

In Hebrew, the word has the sense of *covering*, as the ark, with bitumen or pitch, in Gen. vi. 14; that is, to *smear*, or *pay over*, as our seamen now express it. But it should be considered that the sense of *covering* is rarely or never primary; it is usually from the sense of *putting on*, which is from the sense of *throwing* or *pressing*, or it is from *overspreading*, which is a *spreading*, *stretching*, or *throwing over*; hence the

derivative senses of *covering* and *hiding*. These latter senses are sometimes derived from others; but these are the most general. And in this passage of Genesis, the literal sense is probably to put on, or to *rub* or *spread over*, a sense which coincides with that of the Chaldee and Syriac, Prov. xxx. 20, though differently applied; or what is more probable, the verb, in Gen. vi. 14, is from the noun, which is the name of the substance used, as we should say, to *pitch* with *pitch*.

The real original sense of this Shemitic verb is to remove, to separate, by thrusting away or driving off. Hence its application, in the Chaldee, Syriac, and Arabic, to denial, the rejection of God or truth. To *deny* or *reject*, is to thrust away. Hence from the Arabic *caffer*, an infidel, one who denies and rejects the Mohammedan religion; hence *Caffraria*, the southern part of Africa, the country of infidels; so called by the followers of Mohammed, just as the Christians gave the name of *pagans* to the inhabitants of villages [*pagus*,] who rejected the Christian religion.

This signification explains the Hebrew uses of this word. Its literal sense is applied to the cleansing or purification of sacred things, as the altar; Lev. xvi. 18. In a spiritual sense, to the purification of the soul, a type of the purification by the blood of Christ; hence it is rendered *atonement*, or *expiation*. Hence, probably, the sense of appeasing, Gen. xxxii. 21; Prov. xvi. 14, though this may be from removing or smoothing.

The sense of forgiveness is from thrusting away or giving back, precisely as in the modern languages; Lat. *remitto*, to send back or away; *forgive*, to give back or away; *pardon*, in French, Spanish, and Italian, has a like sense, which is more clearly exhibited by the Dutch *vergeeven*, German *vergeben*; *ver* being the English *far*, to give *far*, to give away; hence to reject, and remember no more. The sense of *give* and of the French *donner*, is nearly the same as that of כָּפַר. To *give*, is to send, to cause to pass; and so of *donner*.

Now it is a question of some moment, whether the opinion that כָּפַר is the same as the English *cover*, has not inclined lexicographers and commentators to render it by this word, in several passages, where the true sense is to *forgive*, or to purify by cleansing from sin.

However this may be, the interpretation given above will fully disprove Lowth's assertion, that this word is never used in the sense of *breaking* or *annulling* a covenant. So confident is the learned Bishop on this point, that he ventures to call in question the reading, Isaiah xxviii. 18; and to suppose the true word to be כָּרַע from כָּרַע, to break. With respect to the reading we shall offer no opinion; but if the present reading is correct, we are confident that no word in the Hebrew language is better fitted to express the sense. Your covenant with death shall be *wiped away*, *abolished*, or as in the version, *annulled*. And so is the rendering in the Syriac.

If כָּפַר is a compound word and the first letter a prefix, it

may be from the same root as the Arabic عَفَرَ *gafara*, whose

signification is to cover. But the primary sense is, to throw or put on. It signifies also, to *forgive*; but to forgive is to send back or away, *remitto*, and not to cover. And we apprehend that for want of knowing the primary sense of such verbs, the word *cover* has been often substituted for *forgive*, in the translating of this verb.

No. 7. Heb. יָכַל to be able; to prevail; Lat. *calleo*; W. *gallu*; Eng. *could*.

No. 8. Ch. בָּלַל to digest; to consume. (No. 5.)

Ar. كَلَّ *kalla*, to collect; to tie; to bind; to unite; also, to divide, impel, or compel. This is the primary sense of the word, or rather of this root; to press; to strain; to urge, or impel; also, to extend. These verbs are different modifications of one radix; and hence the English *hold*, *call*, *hollow*,

*heel*, *hale*; the Latin *calo*, *caulis*, *calleo*, *callus*; Greek *καλλος*, *καλλος* or *καλλος*; and a multitude of words in all the modern languages of Europe.

The sense of holding, restraining, forbidding, hindering, and keeping, are too obvious to need any explanation. They are from straining. To this sense is nearly allied the sense of measuring, or ascertaining what is held or contained. That which is contained is *all*, the whole that is comprehended, from the sense of extension.

The signification of finishing or perfecting, seems, in a good sense, to be from that of soundness; a sense which is from stretching or strength. Or it may be from coming to the end, like *finish* and *achieve*, or from shutting, closing. And the sense of consuming, wasting, failing, may be from bringing to an end. In Latin, to *consume* is to *take all*; and possibly this may be the sense of this verb. But the Arabic sense of failure would seem rather to be from holding, stopping, or coming to an end.

The sense of eating may be from consuming, or taking apart, but from some of the derivatives of No. 5, we are inclined to think the primary sense is to feed, to crowd, to stuff; the primary sense of the root applied to this particular act; for under the Chaldee root we find words which signify the nut of a species of oak, the Gr. *αχυλος*, and a collection or crowd of people, [Gr. *αχλος*,] both of which are from collecting or pressing together.

The sense of seeing and looking is from reaching or casting and striking, or from holding or firing the eyes on.

The sense of trusting seems also to be that of holding to or resting on. The English *hold in behold* is from this root.

The sense of calling, roaring, and thunder, is from impelling the voice or sound; a pressing, driving, or straining, applied to sound; like the Latin *appello*, from *pello*. Hence the sense of publishing, accusing, and defaming.

The sense of sprouting, in the Arabic, is a shooting or pushing out, as in other cases; Lat. *caulis*.

The sense of ability, power, strength, in No. 7, is from straining, stretching, or holding, as in other words of the like sense. Hence Lat. *calleo*, to be skilled, and to be hard, *callus*.

On this root בָּל is probably formed כָּל, a word differently pointed in the Hebrew and Chaldee. This word signifies in Hebrew, to pervert, to err, to be foolish or infatuated, to act foolishly.

In Chaldee, to understand, know or consider; to look or behold; to cause to understand; Rabbinic, to be ignorant; whence its derivatives, knowledge, wisdom, ignorance. These different significations may result from the different effects of the prefix on the original verb.

In Syr. ܒܠܠ (the same word) signifies to be foolish, or mad; to cause to know, or to give understanding; to observe; to search or know thoroughly; to ask or seek to understand; to discern or distinguish; also to err, to sin, to be foolish, or perverse.

In Sam. the same word signifies to look, and to be accused. See Castell. col. 2523.

That כָּל is formed on the same root with a different prefix, is obvious and certain, from the correspondence of significations. This word in Hebrew signifies to understand, or know; to cause to understand; to be wise, or to act wisely; corresponding with the Ch. בָּל above; and being a mere dialectical orthography of the word. It signifies also, to deprive, strip, bereave; and to waste, scatter and destroy; also, to cast, as fruit or offspring; also, to prosper.

Ch. to understand, and Ch. שָׂכַל to complete, to finish; also, to found, to lay the foundation. This is כָּל with שׁ prefixed.

Syr. to found, to finish, to adorn.

Ar. شَكَلَ *shakala*, to bind under the belly; to gird; to bind the feet; to fetter; to *shackle*; to form, or fashion; to be dubious, obscure, and intricate; to agree, suit, or answer to; to be like; to have a beautiful form; to know, perceive, or comprehend; to hesitate; to be ignorant. Derivative, a *shackle*. See Castell. col. 3750.

To this root Castle refers the English *skill*; and it is

## INTRODUCTION.

certain the words correspond both in elements and in sense. Now in the Gothic and Teutonic languages, the verba corresponding to these Shemitic verba, signify in Saxon, *scylan*, to separate, to distinguish; Icelandic and Swedish, *skilia*, to divide, separate, sever; whence *shield*, that which separates, and hence defends; D. *scheelen*, to differ; *schillen*, to peel, or pare; whence *scale* and *shell*. To this root our lexicographers refer *skill*. The prefix in this word would seem to have the force of a negative, like L. *ex*. Now is it possible to suppose that these words can be formed from a common root?

The sense of *sin* and *folly* is probably from wandering, deviating, as in delirium; and this is only a modification of the primary sense of כלל to stretch or extend; that is, departure, separation. Or the ש has, in these senses, the force of a negative.

The sense of *knowing*, *understanding*, is usually or always from *taking*, *holding*, or *extending to*: as we say, I *take* your meaning. In this application these words would seem to be directly from the Eth. and Ch. כדל, to be able; the Latin *calleo*, to be hard, and to know or be well *skilled*. That this word כדל is from the same root as כלה כלה we know by the Samaritan כלה, which signifies *all*, and which is a mere dialectical spelling of the Heb. and Ch. כל.

The sense of depriving and wasting, in the Hebrew, is from separation, the sense of the Gothic and Teutonic words; but it is to be noticed that this sense seems to imply throwing, as one mode of parting, and this is also the direct act of founding, laying the foundation.

When we turn our attention to the Arabic, new affinities are disclosed. The first definition is, to *bind*, to gird, to *shackle*, and hence the English word. The radical sense of *bind* is to strain, the sense of *hold*. And here we arrive at the origin and primary sense of *shall*, *should*; Saxon *sculan*, to be obliged; that is, to be bound or constrained. Hence we see why the words *scale*, *shell* and *shall*, are all written alike in Saxon, *sculan*; for *scale* and *shell* are from peeling, or covering, binding.

From this verb the Saxon has *scyld*, a crime, or guilt, Lat. *scelus*, and *scyld*, a shield. The German has the same word in *schuld*, guilt, culpability, debt; Dutch, *schuld*; Danish *skulde*, should, and *scyld*, a debt, a fault, a crime; Sw. *skuld*, the same. This word *scyld*, *skuld*, and *schuld*, is the English *should*, the preterite of the verb *shall*; and it is the word used in the Saxon, German, Dutch, Danish, Swedish, Norwegian, Icelandic, and Swiss Lord's Prayer, to express what is rendered in English *debts*; forgive us our *debts*. Here we see the primary sense of the word is to be *held*, or bound; hence, liable. The English word *guilt* may be from the same root, without a prefix; but whether it is or not, we observe the word expresses more than the English word debt, trespass, or offence; it comprehends the sense of *fault*, or *sin*, with that of being *held*, or *liable* to answer or to punishment. *Debt*, in the modern use of the word, implies the latter, but not the former; *trespass* and *offence* imply the *sin*, but not the liability to answer. We have no English word that includes both senses, except *guilt*, and this seems to be hardly adequate to express the full sense of *scyld*.

To account for the various significations of the same word, in different languages, and often in the same language, it is necessary to find the primary action expressed by the root; and in compound words it is necessary to observe or ascertain the different effects produced on the original word by the prefixes. Thus the verb *inculpato* in Low Latin signifies to *excuse*; but some modern writers use *inculpate* in a directly different sense; that is, to *blame*.

In like manner *impartible* has two different significations; *that may be imparted*; and in law, *not partible*, or divisible. Such is the fact also with *impassionate*. We are persuaded a vast number of instances of similar diversities in the application of prefixes may be found in the Shemitic languages; and this will account for differences which otherwise seem utterly irreconcilable.

We find in our mother tongue, that the same word signifies to *heal*, and to *conceal*, Lat. *celo*; Saxon *hel*, health; *helan*, *helan*, to heal, to conceal; *ge-helan*, and *ge-helan*, to heal, and to conceal; Old English *hile*. Hence we see that the English

*heal* and the Latin *celo* are the same word differently applied, but from a common signification, which is to make strong or fast, or to hold, from the sense of pressing. Or perhaps the Latin *celo* may have this sense of holding, restraining; and *heal* may rather be from making perfect. No. 2, *supra*.

We may now also see the radical sense of *holy*; Saxon *hal* and *ge-hal*, *whole*, sound, safe; *halig*, holy; *halgian*, to hallow. If this word contains the sense of separation, or driving off, like Latin *sacer*, as it may, it is from shutting, confining, or restraining intercourse. But we are inclined to believe the primary sense of *holy* is sound, entire, coinciding with the radical sense of *heal*.

### Clod, Lando, Clando.

In Welsh, *clod* is praise, from *llod*, a forcible utterance. This is the English *loud*, and Lat. *lando*, which, with a prefix, becomes *plando*. In Welsh, *llodi* signifies to reach out, to crave, from the radical sense of *llod*, to thrust out or extend; but according to Owen, *llodi* is from *llard*, which signifies a shooting out, or a going onward, productiveness, a *lad*, and as an adjective, tending forward, craving, *lwd*; *llodig*, craving, brimming; *llodineb*, lewdness. Now, beyond all question, these words are the Chaldee, Syriac, Hebrew, and Samaritan לוד, to beget; to bring forth; to cause to be born; and as a noun, a child of either sex, a *lad*. The Arabians and Ethiopians use *van* or *raw*, where the Hebrews use *yod*. The Arabic

corresponding word is واد, *walada*, the Ethiopic ወለደ *walad*, to beget, to bring forth.

But this is not all. In Greek, the verb κλαιο, a contraction of κλαιδω, signifies to praise, to celebrate. Here we have precisely the Welsh *llod* above, corresponding with the Latin *lando* and *plando*. But the same Greek word κλαιο, κλαιδω, signifies to shut or make fast. This is the Latin *cludo*, *claudo*. The Saxons used *h* for the Greek *κ* and the Latin *c*; and with these words accords the Saxon *hlud*, a cover; English, a *lid*; that which shuts or makes fast. That these words are all from one root, is a fact, apparent beyond any reasonable doubt; nor is there the least difficulty in ascertaining the affinity, for the radical sense, to reach forward, to thrust, to strain, solves the whole mystery. To *thrust*, gives the sense of begetting and producing; to strain or throw out the voice, gives the sense of praise; and to thrust or press together, gives the sense of closing and making fast. In this manner, words, which at first view appear to have no connection, will, when pursued through different languages, assimilate and unite, not only without forced analogies, but in defiance of all preconceived opinions; and the reluctant mind is at last compelled to admit their identity.

There is another set of words whose derivation from the same root is very certain, though perhaps less obvious. These are the Danish *slutter*, to shut, close, conclude, finish, determine; *slutter*, a key-keeper, a jailer; Swedish *sluta*, claudere, obscurare, to shut, or shut up, or end; *stoft*, a castle; D. *stetel*, a key; *stot*, a lock, a castle, a conclusion; *sluten*, to shut, lock, close, stop, conclude; G. *schloss*, a lock; *schliessen*, to close, conclude, finish, fetter, shackle; *schliessen*, a sluice; D. *sluis*, id. Eng. *sluice*, that is, which shuts or fastens; Low Latin, *exclusa*. See *Spelman's Glossary*. These words are unequivocally formed from the root of *claudo*, *clausi*, by the prefix *s*, just as the Welsh *yslac*, slack, loose, is formed on *llac*, and *yspreithaw*, on *yspail*, spoil, and this on the root of *peel*. We observe all the Teutonic dialects use the dental *t*, as the final radical, except the German. The Latins use both the dental and a sibilant, *claudo*, *clausi*, *clausus*.

If the Danish *lyd*, sound, Sw. *lyda*, to sound, is the same word as English *loud*, these words belong to this family.

### Cradle.

Another example. The English word *cradle*, Saxon *cradel*, is in Welsh *cryd*, a rocking, a shaking, a *cradle*. In Welsh, the verbs *crydu*, *crydiaw*, *crydian*, signify to shake, to tremble. These correspond to the Irish *creulham*, to shake; Greek κραιο, to shake, to swing. The Welsh verbs are by Owen deduced from *rhyd*, which signifies a moving. Now רח in Hebrew, Chaldee, and Ethiopic, signifies to shake or tremble.

## INTRODUCTION.

The same word in Arabic, **رعد**, signifies to thunder; to impress terror; to tremble; to shake. This coincides with the Latin *rudo*, to roar, to bray; and we know from the voice of the ass, that roughness or shaking is an ingredient in the sense of this word. We know it also from *rudis*, one of the

affinities of *rudo*. There is also in Arabic, **رَدَّ**, which is rendered to run hither and thither; to move one way and the other; to tremble; to shuke. In Hebrew **רָדַד** signifies to tremble or shake, and to palpitate; in Syriac and Eth. to rub or scrape. This connects the word directly with *cradle*, through the Hebrew; and through the Syriac, with the Latin *rado*. Here again we find the sense of roughness or grating. Then turning to the Welsh, we find *grydiaw*, which signifies to utter a rough sound; to shout, whoop, or scream; *grydnst*, a murmur, from *gryd*, a shout or whoop, and this from *rhyd*, the word above mentioned; so that *crydu*, to shuke, whence *cradle*, is from the same root as *grydiaw*, to shout, and this is the Italian *gridare*; Sp. and Port. *gritar*; Saxon *grædan*; Swedish

*grata*; Danish *græder*; Dutch *kryten*; German *greiten*. This word in French is contracted, by the omission of the last radical, into *crier* for *crider*; whence, probably, we have *cry*, W. *cri*. Hence we find that the sense of *cry* is to utter a rough sound; and this is connected with the braying of the ass, with shaking, trembling, and with roaring, murmuring, and thunder. The connection in this example is so marked as to preclude all hesitation as to the identity of the words.

The Shemitic roots **גִּידַד**, **רָדַד**, and **רָדַד**, all, in some of the languages of that stock, coincide in sense and elements with the English *grate*, French *gratter*; and if the first letter is a prefix, they would seem to unite with the Latin *rado*. But this is a point we would not undertake to determine.

One fact more. The Welsh *cri*, above mentioned, signifies a *cry*; and as an adjective, rough, raw. Now this coincides with the Latin *crudus*, in sense; and *crudus* with the Welsh *cryd*, above mentioned.

The Dan. *brygger* Eng. to *brew*, are probably connected with *break*, with *freckle*, and with *rough*. So under this root, the Welsh *grydiaw*, signifies to heat, scorch, parch, whence *grydyll*, a griddle, from *graid*, that shoots in rays, heat, ardency, from *gra*, that shoots, or rises, as the nap or frieze of cloth. The latter is probably a contracted word, of the same family, but not the root, as Owen supposes. But the radical sense implies a shaking, agitation, and roughness.

### *Meet, Mete, Measure.*

SAXON.—*Metan*, to put, to place; Fr. *mettre*, It. *mettere*, Sp. and Port. *meter*, Lat. *mitto*.

*Amelan*, *gemelan*, to *meet*, to find, to measure.

*Gemetung*, *gemetung*, a *meeting*.

*Gemet*, *gemete*, fit, suitable, Eng. *meet*; also, painted or portrayed.

*Gemetegan*, *gemetian*, to moderate; *gemetlic*, moderate, modest.

*Mete*, *measure*, *mod*, Lat. *modus*, *modus*.

*Metre*, measure in verse, meter [not *metre*].

*Melere*, an inventor, a painter.

*Mete*, middling [*modicioris*], modest, moderate.

*Mot*, *gemot*, a meeting, a council.

*Witena-gemot*, a council of wise men.

*Molian*, to meet, especially for debate. Eng. to *moot*.

GOthic.—*Molyan*, *gamolyan*, to meet, to find.

*Mota*, a place for the receipt of toll or customs.

Dutch.—*Ontmooten*, to *meet*, to encounter.

*Meeten*, and *toemecten*, to measure.

*Meeter*, a measurer.

*Gmoeten*, to *meet*; *gmoet*, a meeting.

GERMAN.—*Mass*, *measure*, *meter*; *masse*, moderation.

*Messen*, *vermessen*, to measure; *messer*, a measurer.

*Gemäss*, *measure*; also conformable, suitable; Eng. *meet*, suitable; German *gemässigt*, temperate, moderate.

SWEDISH.—*Möta*, to *meet*, to fall on, to come to, to happen. [This is the sense of finding.]

*Möte*, a meeting.

*Mot*, and *emot*, toward, against; as in *motstå*, to stand against, to resist.

*Måta*, to measure; *mätt*, measure, meter, mode.

*Mattelig*, moderate, middling, frugal, temperate.

*Mätta*, to be sufficient, to satisfy, to cloy.

DANISH.—*Möder*, to *meet*, to convene; *møde* or *mode*, a meeting; *mod*, contrary, opposite, against, to, toward, for, on, by, aside, abreast, as in *modsetter*, to set against, to oppose; *modsiget*, to say against, to contradict; *modvind*, a contrary wind.

*Moed*, *moden*, ripe, mellow, mature. [Qu. Lat. *mitis*.]

*Mode*, manner, fashion. [Probably from the Latin.]

*Maade*, *measure*, form, style of writing, way, mode, manner, fashion. [This is the native Danish word corresponding to the Lat. *modus*.]

*Maadelig*, moderate, temperate.

*Met*, enough, sufficient; *metter*, to satisfy, or sate, to glut.

From the same root are the G. *mit*, D. *met*, *mede*, Sw. and Dn. *med*, Gr. *μετα*, signifying *with*.

By the first signification of the Saxon *metan*, or *metan*, we find that this word, which is the English *meet*, is also the French *mettre*, and Lat. *mitto*, the sense of which is to throw or send, to put, to lay. *Meet* is only a modification of the same sense, to come to, to fall, to reach, hence to find; as we say, to *fall on*.

The sense of painting or portraying is peculiar to the Saxon. We are not confident that this sense is from finding; but we observe that *metere* is rendered an inventor and a painter. The sense of *paint*, then, may be to find out, to devise, or contrive.

The sense of dreaming is also peculiar to the Saxon. The sense may be to devise or imagine, or it may be to *roze*, as in some other words of like signification. If so, this sense will accord with the Syriac **רָזַע**, *infra*.

The other significations present no difficulty. To *meet*, is to come to, to reach in proceeding or in extending; hence to find. The primary sense of *measure* is to extend, to stretch to the full length or size of a thing.

*Meet*, fit, suitable, like *par*, *peer*, *pair*, is from extending or reaching to. So *suit* is from the Latin *sequor*, through the French, to follow, to press, or reach toward. See *par*, under **בִּירָא**, *supra*.

The English *meet* and *mete* appear to be from the Saxon dialect, but *moot* from the Gothic.

Let it be remarked that the Saxon *meet* and *mete*, are united in the same orthography; and in the Dutch the orthography is not very different; *ontmoeten*, *gemoeten*, to meet, and *meeten*, to measure. Not so in the other languages.

In German, *mass* is measure, and *messen*, to measure; but the sense of *meet* does not occur. Yet that *mass* is the same word as *meet*, fit, varied only in dialect, appears from this, that *gemüss*, with a prefix, is suitable, answering to the English *meet*.

The Swedish and Danish words follow the Gothic orthography; Swedish *möta*, to meet, to fall on, to come to, to happen. These significations give the sense of finding, and

are closely allied to the senses of the Arabic verb **مَدَّ** *madda*, *infra*.

The Danish verb is *möder*, to meet, but in both the Swedish and Danish, the sense of measure is expressed by a different

orthography. Sw. *måta*, to measure; *mätt*, measure; Dan. *maade*, measure, mode. In these two languages we find also

(the sense of sufficiency, and to satisfy. See *infra*, the Ar. **مَدَّ** and Heb. and Ch. **מָדַד**.)

## INTRODUCTION.

But in these Gothic dialects, there is one application of *meeting* which deserves more particular notice. In Swedish, *mot* and *emot* is a preposition of the same signification as the English *against*. It is rendered toward, against. So in Danish, *mod* is contrary, opposite, against, to, toward, by, aside, abreast. This preposition is the simple verb, without any addition of letters, prefix or suffix. We hence learn that the sense of such prepositions is a meeting or coming to, which gives the sense of *to or toward*; but when one meets another in front, it gives the sense of opposition, or contrary direction. This coming to or meeting, may be for a friendly purpose, and hence in one's favour, like *for* in English. Thus in Danish, "Guds godhed *mod* os," God's goodness or mercy toward us. In other cases, *mod* signifies against, and implies counteraction or opposition; as *modgift*, an antidote; *modgang*, adversity. So *for* in English signifies toward, or in favour of; and also opposition and negation, as in *forbid*.

In the Danish we find *moet*, *moden*, ripe, *mature*. We shall see this sense in the Chaldee ܡܕܐ. The sense is to reach, extend, or come to.

The Latin *modus* is from this root, and, by its orthography, it seems to have been received from the Gothic race. The sense is measure, limit, from extending, or comprehending. This then becomes the radix of many words which express limitation or restraint, as *moderate*, *modest*, *modify*; a sense directly contrary to that of the radical verb.

This leads us a step further. In Saxon, Gothic, and other northern languages, *mod*, *mood*, signifies mind, courage, spirit, anger, whence English *moody*. The primary sense is an advancing or rushing forward, which expresses mind or intention, that is, a setting or stretching forward, and also spirit, animation, heat, and lastly, anger. So the Latin *animus* gives rise to *animosity*; and the Greek μῆνις, mind, signifies also, strength, force, vehemence, and anger. *Mania* is from the same radical sense.

Let us now connect this root or these roots, with the Shemitic languages.

In Hebrew and Chaldee, מדד signifies to measure; מד, a measure. This coincides with the Latin *metior*, and Gr. μετρέω, as well as with the Saxon, Dutch, Danish, and Swedish, which all write the word with a dental, but the German is *mass*.

In Syriac, ܡܕܐ *mad*, signifies to escape, to get free, that is, to depart, a modification of the sense of extending in the Arabic. A derivative in Syriac signifies a duty, toll or tribute; and we have seen in the Gothic, that *mota* is a toll-house. It may be from measuring, that is, a portion, or perhaps income.

ܡܕܐ

This word in Arabic, مَدَّ *madḍa*, signifies,

1. To stretch or extend, to draw out, to make or be long, to delay or give time, to forbear, to bring forth. To extend is the radical sense of *measure*.

2. To separate, or throw off or out; to discern, secrete, or discharge. Hence to become *matter* or sanies, to produce pus, to *mature*. Here we have the origin of the word *matter*, in the sense of *pus*. It is an excretion, from throwing out, separating, freeing, discharging. Here we have the sense of the Latin *mitto*, *emitto*.

3. To assist, to supply. This sense is probably from coming to, that is, to approach or visit. "I was sick, and ye visited me. I was in prison, and ye came to me." Matt. xxv.

This application coincides with the English *meet*, but particularly with the Swedish and Danish sense of the word.

4. To make thin, to attenuate; probably from stretching.

Among the Arabic nouns formed under this root, we find a *measure*, or *modius*, showing that this verb is the same as the Chaldee and Hebrew; we find also *matter* or *pus*, and lenity. Qu. Lat. *mitis*.

In Chaldee, ܡܕܐ or ܡܕܐ signifies to come to, to happen, to reach, [to *meet*.] to be ripe or *mature*, to cause to come, to bring or produce. The first sense gives that of finding, and the latter gives that of maturing, and we observe that *matter*,

ܡܕܐ

or *pus*, is from the Arabic مَدَّ *madḍa*, and the sense of *mature*, from the Chaldee ܡܕܐ *mīḏa*. Yet in the use of *mature*,

from the Latin *maturus*, we connect the words, for to *mature* is to ripen, and to generate *matter*.

In Syriac, this verb signifies the same as the Chaldee, to come to; and also to be strong, to prevail, that is, to strain or stretch, the radical sense of power.

In Hebrew, מצא has the sense of the foregoing verb in the Chaldee, to find, to come to, to happen.

In Chaldee, this verb signifies to find, and to be strong, to prevail; hence both in Hebrew and Chaldee, to be sufficient. Here we see the Danish and Swedish *meeter*, and *mätta*, to be sufficient. This is also *meet*, dialectically varied.

In Syriac, also, this verb signifies to be strong or powerful; also in Pah. to bring or press out, to defecate, which sense unites this word with the Heb. יצד to press, to squeeze. In Ethiopic, this verb signifies to come, to happen, to cause to come, to bring in, to bring forth. Now it is evident that מצא and the Chaldee ܡܕܐ are dialectical forms of the same word; the former coinciding with the German *mass* in orthography, but with the other languages in signification.

In Chaldee, ܡܕܐ signifies the *middle*, and as a verb, to set in the middle, to pass the middle; in Syriac, to be divided in the middle. Qu. Is not this a branch of the family of *meet*?

In Chaldee, ܡܕܐ *amad*, to measure, is evidently from ܡܕ, with a prefix or formative ܐ. This word, in Syriac, signifies, like the simple verb, to escape, to be liberated. In Pael, to liberate.

ܡܕܐ

In Arabic, this verb أَمَدَ *amida*, signifies to be terminated,

to end, whence the noun, an end, limit, termination, Latin *meta*, which, Ainsworth informs us, signifies, in a *metaphorical* sense, a limit. The fact is the reverse; this is its *primary* and *literal* sense, and that of a pillar and goal are particular appropriations of that sense.

In Hebrew, מִדָּה signifies a cubit, a measure of length.

The same in the Rabbinic, from מד with a prefix.

In Chaldee, this verb signifies to be contracted, to shrink.

Is not this sense from מד measure, *modus*, a limit, or a drawing.

That the Shemitic words, ܡܕܐ, ܡܕܐ, and ܡܕܐ are words of the same stock with *meet*, *mete*, Lat. *metior*, there can be no doubt; but it is not easy to understand why the different significations of *meeting* and *measuring*, should be united in one word, in the Saxon language, when they are expressed by very different words in the Shemitic, and in most of the Teutonic languages. We know, indeed, that in German a sibilant letter is often used, in words which are written with a dental in all the other kindred languages. But in this case the German *mass*, measure, must coincide with מד, as must the Swedish *måta*, and Dan. *maade*, and the Saxon *metan*, Dutch *gemooten*, Goth. *motyan*, Sw. *möta*, Dan. *møder*, with the Chaldee ܡܕܐ but not with the word ܡܕܐ.

It may not be impossible nor improbable that all these words are from one stock or radix, and that the different orthographies and applications are dialectical changes of that root, introduced among different families or races of men, before languages were reduced to writing.

In the Latin *mensus*, from *metior*, the *n* is probably casual, the original being *mesus*, as in the French *mésure*. We have reason to think there are many instances of this insertion of *n* before *d* and *s*.

From this exhibition of words and their significations, we may fairly infer the common origin of the following words. Lat. *mitto*, French *mettre*, English *met*, to come to, *meet*, fit, and *mete*, to measure, Lat. *metior*, *metor*, G. μετρέω, μετρώ, Lat. *mensura*, Fr. *mésure*, Eng. *measure*, Lat. *modus*, mode, Sax. and Goth. *mod*, mind, anger, whence *moody*, Eng. *moot*, Lat. *maturus*, mature, and Eng. *matter*.

In Welsh, *madu* signifies to cause to proceed; to send, [Lat. *mitto*.] to suffer to go off; to render productive; to become beneficial; and *mad* signifies what proceeds or goes forward, hence what is good; and *mad*, the adjective, signifies proceeding, advancing, progressive, good or beneficial. This word then affords a clear proof of the radical sense of *good*. We have like evidence in the English *better*, *best*, and in *prosperity*, which is from the Greek εὐπορεία, to advance.

## INTRODUCTION.

In Welsh also we find *madrez*, *matter*, pus; *madru*, to dissolve, to putrefy, to become pus. That these words are from

the same root as the Arabic ل *supra*, we think to be very obvious; and here we observe that the Welsh have one important sense derived from the root, that of *good*, which occurs in none of the other languages. But the primary sense is the same as that of the other significations, to go forward, to advance; hence to promote interest or happiness. Here we have undeniable evidence that the sense of *good*, Welsh *mad*, and the sense of *matter*, pus, proceed from the same radix.

### LEGO.

The Greek λεγω is rendered, to speak or say; to tell, count, or number; to gather, collect, or choose; to discourse; and to lie down. This last definition shows that this word is the English *lie* and *lay*; and from this application, doubtless, the Latins had their *lectus*, a bed, that is, a spread, a lay.

The Latin *lego*, the same verb, is rendered, to gather; to choose; to read; to steal, or collect by stealing; and the phrase, *legere oram*, signifies to coast, to sail along a coast; *legere vela*, is to furl the sails; *legere halitum*, to take breath; *legere litus*, to sail close to the shore; *legere milites*, to enlist or muster soldiers; *legere pugno*, to strike, perhaps to *lay on* with the fist.

It would seem, at first view, that such various significations cannot proceed from one radix. But the fact that they do is indubitable. The primary sense of the root must be to throw, struin or extend, which in this, as in almost all cases, gives the sense of *speaking*. The sense of collecting, choosing, gathering, is from throwing, or drawing out, or separating by some such act; or from throwing together. The sense of lying down is probably, from throwing one's self down. The sense of reading, in Latin, is the same as that of speaking, in the Greek, unless it may be from collecting, that is, separating the letters, and uniting them in syllables and words; for in the primitive mode of writing, diacritical points were not used. But probably the sense of *reading* is the same as in *speaking*.

The phrases *legere oram*, *legere litus*, in Latin, may coincide with that of our seamen, to stretch or *lay* along the shore or coast, or to *lug* the land; especially if this word *lay* in Sanscrit, signifies to *cling*, as we have seen it stated in some author, but for which we cannot vouch. If this sense is attached to the word, it proves it closely allied to the L. *ligo*, to bind.

That the sense of throwing, or driving, is contained in this word, is certain from its derivatives. Thus, in Greek, απολεγω signifies to select, to collect; and also to reject, to repudiate, and to forbid; which imply throwing, thrusting away.

Now, if throwing, sending, or driving, is the primary sense, then the Latin *lego*, to read, and *lego*, *legare*, to send, are radically the same word; the inflections of the verb being varied, arbitrarily, to designate the distinct applications, just as in *pello*, *appello*, *appellere*, to drive, and *appello*, *appellere*, to call.

And here it may be worth a moment's consideration, whether several words with prefixes, such as *slay*, *flog*, and the Latin *plico*, W. *plygu*, are not formed on the root of *lay*, that is, *lag* or *lak*. The sense of *slay*, Sax. *slagan*, *slaan*, is properly to strike, to beat; hence in Saxon, "Hig slogon heora word," they *slew* their league or contract; that is, they struck a bargain. It signifies also to throw, as to *slag* one into prison; also to fall; to set or lay. The sense of killing is derivative from that of striking, a striking down.

*Flog*, Lat. *figo*, signifies, primarily, to *rush*, *drive*, *strike*, Eng. to *lick*; and if formed on the root of *lay*, is precisely the popular phrase, to *lay on*.

If *plico* is formed with a prefix on *lay* or its root, it must have been originally *pelico*, that is, *belico*, belay. Then to fold, would be to *lay on* or *close*; to lay one part to another. Now this word is the Welsh *plygu*, to fold, which Owen makes to be a compound of *py* and *lly*. The latter word must be a contraction of *llyg*.

We know that the word *reply* is from the French *repliquer*, the Latin *replico*. Now, to *reply*, is not to *fold back*, but to send back, to throw back, as words or an answer; and this

gives the precise sense of *lay*, to throw, to send, which must be the sense of the radical word.

It is no inconsiderable evidence of the truth of our conjecture, that we constantly use the phrase to *lay on*, or *lay to*, as synonymous with *ply*, a word belonging to this family. To *pledge*, another of this family, is to *lay down*, to deposit; and the primary sense of *play*, Saxon *plegan*, Dan. *leger*, Sw. *leka*, is to strike or drive.

In Welsh, *lluglaw* signifies to throw, fling, cast, or dart; to pelt; to drift; from *llug*, a darting, a flash, glance, or sudden throw; hence *lluged*, lightning. *Llug* signifies also, that breaks, or begins to open, a gleam, a breaking out in blotches; the plague. *Llug* signifies also, that is apt to break out, that is bright, a tumour, eruption. These words coincide with English *light*, Lat. *luceo*; the primary sense of which is to throw, shoot, or dart; and these words all contain the elements of *flog* and *fling*.

In Welsh, *llygu* signifies to fall flat, to lie extended, or to squat. This is evidently allied to *lay* and *lie*.

These senses agree also with that of *luck*, to fall, or come suddenly; that is, to rush or drive along.

In Russ. *vlagayu* is to lay, or put in; equivalent to the German *einlegen*.

The Latin *fluo* is contracted from *flugo*; and the radical sense of *flow* is the same as that of *light*. So the river *dar*, in Europe, is doubtless from the same source as the Oriental דאר to shine, whence *air*. And דאר which, in Hebrew, signifies to flow as water, as well as to shine, chiefly signifies in Chaldees and Syriac, to shine.

To show the great importance, or rather the absolute necessity, of ascertaining the primary sense of words, in order to obtain clear ideas of the sense of ancient authors, more particularly of difficult passages in dead languages, let the reader attend to the following remarks.

In commenting on certain parts of Isaiah xxviii. Lowth observes in his Preliminary Dissertation, the difficulty of determining the meaning of ברית in verse 15th. In our version, as in others, it is rendered *agreement*; but, says Lowth, "the word means no such thing in any part of the Bible, except in the 15th verse following; nor can the lexicographers give any satisfactory account of the word in this sense." Yet he agrees with Vitringa, that in these passages it must have this signification. The difficulty, it seems, has arisen from not understanding the primary sense of *seeing*, for the verb generally signifies to *see*; and as a noun the word signifies sight, vision; and so it is rendered in the Latin version annexed to Vanderbooght's Bible. The Seventy render it by συνδυνας, a covenant or league; and they are followed by the moderns. "Nous avons intelligence avec le sepulchre:" French. "Noi habbiam fitta lega col sepolcro:" Italian of Diodati.

Parkhurst understands the word to signify, to fasten, to settle, and he cites 2 Sam. xx. 9, ברית "Joab took Amasa by the beard." Here the sense is obvious; and from this and other passages, we may infer with certainty, that the radical sense is to *reach* to, or to *seize*, *hold*, or *fix*. If the sense is to *reach* to, then it accords with *covenant*, *conveniens*, coming to; if the sense is to *fix*, or fasten, then it agrees with *league*, Lat. *ligo*, and with *pact*, *pactum*, from *pango*, to make fast; all from the sense of extension, stretching, straining. Hence the meaning of ברית the breast; that is, the firm, fixed, strong part. And if the English *gaze* is the same word, which is not improbable, this determines the appropriate sense of *seeing* in this word, to be to *fix*, or to look or reach with the eye fixed.

But we have other and decisive evidence of the primary signification of this word in the obvious, undisputed meaning of ברית the same word with a prefix, which signifies to catch, or lay hold on; to seize; hence behind, following, as if attached to; and hence drawing out in time, to delay.

Now it is not improbable that the Arabic حاز *hauza*, may be a word of the same stock; and this signifies, among other senses, to collect, contract, or draw together, to accumulate, to have intercourse or commerce with another. The latter sense would give nearly the signification of the Hebrew word.

Lexicographers are often embarrassed to account for the

## INTRODUCTION.

different signification of words that are evidently derived from the same root. Thus, in Hebrew, *רָא* is rendered to sing; to look, behold, or observe; and to rule; and its derivatives, a ruler, a wall, the navel-string, a chain, or necklace, &c. How can a word signify to rule, and to sing, and to look? Nothing can be more easy or natural. The sense is, in both cases, to stretch or strain, to reach. To sing is to strain the voice; to rule is to restrain men; and to see is to reach, or to hold in view.

In Latin, *sero* signifies to sow, to plant, to beget, to spread; *consero*, to sow, and to close or join; *desero*, to leave off, to desert; *assero*, to plant by or near, and to assert, affirm, and pronounce; *dissero*, to discourse; *insero*, to insert, to implant; *resero*, to unlock, to open, to disclose. *Desero*, to desert, Ainsworth says, is a compound of *de* and *sero*, "ut sit desertum quod non seritur nec colitur." And *dissero* he supposes must be a metaphorical use of the word. Now, on the principles we have unfolded, nothing is easier than an explanation of these words. The sense of *sero* is to throw, to thrust; its literal sense is applied to sowing and planting: *consero* is to thrust or drive together; *desero* is to throw from; *assero* is to throw in words, or to throw out, as in *appello*; *dissero* is to throw words or arguments, with the sense of spreading, expatiating; *insero* is to throw or thrust in; *resero* is to throw or drive from, hence to unlock or open.

It is by resorting to the primary idea of words, that we are able to explain applications, apparently, or in fact, diverse and even contrary. A very common example of this contrariety occurs in words which signify to guard or defend. For instance, the Latin *arceo* signifies to drive off, and to protect, secure, hold, restrain, or keep from departing or escaping; two senses directly opposite. This is extremely natural; for *arceo* signifies to thrust off, repel, drive back; and this act defends the person or object attacked. Or if we suppose the sense of *straining* to be anterior to that of repulsion, which is not improbable, then the act of straining or holding produces both effects; to repel or stop what advances to assault, and protect what is inclosed or assaulted. The words *guard* and *warren* present a similar application of the primary idea; and all languages which we have examined, furnish a multitude of similar examples.

These examples illustrate the utility of extensive researches in language; as all cognate languages throw light on each other; one language often retaining the radical meaning of a word which the others have lost. Who, for instance, that is acquainted only with the English use of the verb to *have*, would suspect that this word and *happen* are radically one, and that the primary sense is to *fall* or *rush*, hence to fall on and seize? Yet nothing is more certain. In the Spanish language the senses of both verbs are retained in *haber*; and the Welsh *happiau* gives us the true original signification.

In like manner the primary sense of *venio* in Latin, cannot be certainly determined, without resorting to other words, and to kindred languages. In Latin, the word signifies to come or arrive; but in Spanish, *venida*, from *venir*, the Latin *venio*, signifies not only a coming or arrival, but an attack in fencing. *Venio* coincides in origin with the English *find*; Saxon *findan*; German and Dutch *finden*, to find, to fall or light on; Danish *finde*; Swedish *finna*, to find, to discover, to meet, to strike against, [*offendere*]. The primary sense of *venio*, then, is not merely to come or arrive, but to rush or move with a driving force; and this sense is applicable to *coming* or *going*.

That the primary sense is to fall or rush, we have evidence in the Latin *ventus*, and English *wind*, both from the root of this verb. We have still further evidence in the word *venom*, which in Welsh is *gwenwyn*; *gwen*, white, and *gwyn*, rage, smart, whence *gwynn*, wind. *Venom* is that which frets or excites a raging pain. Hence we may infer that Latin *venor*, to hunt, to chase, is of the same family; and so is *venia*, leave, or leave to depart, or a departure, a leaving, coinciding in signification with *leave*.

The latter word, *venia*, proves another fact, that the primary sense of *venio* is, in general, to move in any direction, and that the Latin *sense*, to come, is a particular appropriation of that sense.

In ascertaining the primary sense of words, it is often useful or necessary to recur to the derivatives. Thus the

Latin *lato* is rendered to hurt; but, by adverting to *allido*, *elido*, and *collido*, we find that the original signification is to strike, hit, or dash against. Hurt, then, is the secondary sense; the effect of the primary action expressed by the verb.

So the Latin *rapio*, to seize, does not give the sense of rapidus, rapid; but the sense of the latter proves the primary sense of *rapio* to be to rush, and in its application, to rush on and seize.

These examples will be sufficient to show how little the affinities of language have been understood. Men have been generally satisfied with a knowledge of the appropriate sense of words, without examining from what visible or physical action, or primary sense, that particular application has been derived. Hence the obscurity that still rests on the theory of language. It has been supposed that each word, particularly each verb, has an original specific sense, or application, distinct from every other verb. We find, however, on a close examination and comparison of the same word in different languages, that the fact is directly the reverse; that a verb expressing some action, in a general sense, gives rise to various appropriate senses, or particular applications. And in the course of our researches, we have been struck with the similarity of manner in which different nations have appropriated derivative and figurative senses. For example, all nations, as far as our researches extend, agree in expressing the sense of justice and right, by straightness, and sin, iniquity, wrong, by a deviation from a straight line or course. Equally remarkable is the simplicity of the analogies in language, and the small number of radical significations; so small indeed, that we are persuaded the primary sense of all the verbs in any language, may be expressed by thirty or forty words.

We cannot, at this period of the world, determine, in all cases, which words are primitive, and which are derivative; nor whether the verb or the noun is the original word. Mons. Gebelin, in his *Monde Primitif*, maintains that the noun is the root of all other words. Never was a greater mistake. That some nouns may have been formed before the verbs with which they are connected, is possible; but as languages are now constructed, it is demonstrably certain, that the verb is the radix or stock from which have sprung most of the nouns, adjectives, and other parts of speech belonging to each family. This is the result of all our researches into the origin of languages. We find, indeed, that many modern verbs are formed on nouns; as to *practise* from *practice*; but the noun is derived from a Greek verb. So we use *wrong* as a verb, from the adjective *wrong*; but the latter is primarily a participle of the verb to *wring*. Indeed a large part of all nouns were originally participles or adjectives, and the things which they denote were named from their qualities. So *pard*, *pardus*, is from *ברד* *barad*, hail; and the animal so named from his spots, as if sprinkled with hail, from the sense of separation or scattering. *Crape*, the Fr. *crêpe*, is from *crêper*, to *crisp*. *Sight* signifies, primarily, seen; it being the participle of *seon*, contracted from *sigan*. *Draught* is the participle of *draw*, that which is drawn, or the act of drawing; *thought* is the participle of *think*.

As the verb is the principal radix of other words, and as the proper province of this part of speech is to express action, almost all the modifications of the primary sense of the verb may be comprehended in one word, to *move*.

The principal varieties of motion or action, may be expressed by the following verbs.

1. To drive, throw, thrust, send, urge, press.
2. To set, fix, lay. But these are usually from thrusting, or throwing down.
3. To strain, stretch, draw; whence holding, binding, strength, power, and often health.
4. To turn, wind, roll, wander.
5. To flow, to blow, to rush.
6. To open, part, split, separate, remove, scatter. See No. 16.
7. To swell, distend, expand, spread.
8. To stir, shake, agitate, rouse, excite.
9. To shoot, as a plant; to grow; allied to No. 1.
10. To break, or burst; allied sometimes to No. 3.
11. To lift, raise, elevate; allied to No. 9.
12. To flee, withdraw, escape; to fly; often allied to No. 1.

13. To rage; to burn; allied to Nos. 7 and 8.
14. To fall; to fail; whence fading, dying, &c.

18. To strike; to beat; allied to No. 1.

23. To stop, cease, rest; sometimes at least, from straining, holding, fastening.
24. To creep; to crawl; sometimes connected with scraping.
25. To peel, to strip, whence spoiling.
26. To leap, to spring; allied to Nos. 9 and 1.
27. To bring, bear, carry; in some instances connected with producing, throwing out.
28. To sweep.
29. To hang. No. 10.
30. To shrink, or contract; that is, to draw. See No. 3.
31. To run; to rush forward; allied to No. 1.
32. To put on or together; to unite; allied to Nos. 1 and 3.
33. To knit, to weave.
34. To gain, to win, to get. See No. 15.

These and a few more verbs express the literal sense of all the primary roots. But it must be remarked that all the foregoing significations are not distinct. So far from it, that the whole may be brought under the signification of a very few words. The English words to *send, throw, thrust, strain, stretch, draw, drive, urge, press*, embrace the primary sense of a great part of all the verbs in every language which we have examined. Indeed, it must be so, for the verb is certainly the root of most words; and the verb expresses *motion*, which always implies the application of force.

Even the verbs which signify to hold or *stop*, in most instances at least, if not all, denote, primarily, to strain or restrain by exertion of force: and to *lie* is, primarily, to throw down, to lay one's self down. So that intransitive verbs are rarely exceptions to the general remark above made, that all verbs primarily express motion or exertion of force. The substantive verb has more claims to be an exception than any other; for this usually denotes, we think, permanence or continued being, but the primary sense of this verb may perhaps be to *set or fix*; and verbs having this sense often express *extension in time or duration*. So *turn* in Greek, is to stretch, but the same word *teno* in Latin, is to hold, hence *continuance*.

Let us now attend to the radical sense of some of the most common verbs.

*Speaking, calling, crying, praying, utterance of sounds*, is usually from the sense of *driving or straining*. Thus in Latin *appello* and *compello*, though of a different conjugation from *pello*, *depello*, *impello*, are from the same root, and although the Latin *repello* does not signify to *recall*, yet the corresponding word in Italian, *rappellare*, and the French *rappeler*, signify to *recall*, and hence the English *repeal*. Hence also *peal*, either of a bell or of thunder. This is the Greek *βαλλω*, and probably *παλλω* is from the same root. The sense of *striking* is found in the Greek verb, and so it is in the Latin *loquor*, English *clock*. But in general, speaking, in all its modifications, is the straining, driving, or impulse of sounds. Sometimes the sense coincides more exactly with that of *breaking or bursting*.

*Singing* is a driving or straining of the voice: and we apply *strain* to a passage of music, and to a course of speaking.

We are not confident that we can refer the sensation of *hearing* to any visible action. Possibly it may sometimes be from striking, hitting, touching. But we observe that *hear* is connected in origin with *ear*, as the Latin *audio* is with the Greek *αωω*, the ear; whence it appears probable that the verb to *hear*, is formed from the name of the ear, and the *ear* is from some verb which signifies to shoot or extend, for it signifies a limb.

The primary sense of *seeing*, is commonly to extend to, to reach; as it were, to reach with the eye. Hence the use of *behold*, for the radical sense of *hold* is to strain; and hence its signification in *beholden*, held, bound, obligated. See the verb *SEE* in the Dictionary.

The sense of *look* may be somewhat different from that of *see*. It appears, in some instances, to have for its primary signification, to *send, throw, cast*; that is, to send or cast the eye or sight.

The primary sense of *feeling* is to touch, hit, or strike; and probably this is the sense of *taste*.

Wonder and astonishment are usually expressed by some word that signifies to *stop or hold*. Hence the Latin *miror*, to wonder, is the Armoric *miret*, to stop, hold, hinder; coinciding with the English *moor*, and Spanish *amarrar*, to *moor*, as a ship.

To *begin* is to come, or fall on; to thrust on. We have a familiar example in the Latin *incipio*, in and *capio*; for *capio* is primarily to fall or rush on and seize. See *BEGIN* in the Dictionary.

*Attempt* is expressed by straining, stretching, as in Latin *tento*. See *ASSAY* and *ESSAY*.

*Power, strength*, and the corresponding verb, to *be able*, are usually expressed by *straining, stretching*, and this is the radical sense of *ruling or governing*. Of this the Latin *rego* is an example, which gives *rectus*, right, that is, *stretched, straight*.

*Care*, as has been stated, is usually from *straining*, that is, a *tension* of the mind.

*Thinking* is expressed by *setting*. To *think* is to set or fix or hold in the mind. It approaches to the sense of *suppose*, Latin *suppono*.

And under this word, let us consider the various applications of the Latin *puto*. The simple verb *puto* is rendered to *prune, lop, or dress*, as vines, that is, according to Ainsworth, *putum*, i. e. *prunum reddo, purgo*, by which we understand him to mean, that *putum* is either a change of *purum*, or used for it; a most improbable supposition, for the radical letters *t* and *r* are not commutable. *Puto* is rendered also, to make even, clear, adjust, or cast up accounts; also to think or consider; to suppose; to debate. Its compounds are *amputo*, to cut off, prune, amputate, to remove; *computo*, to compute, to reckon, to think or deem; *disputo*, to make clear, to adjust, or settle, to dispute, or debate, to reason; *imputo*, to impute, to ascribe or lay to, to place to account; *reputo*, to consider, to revolve, to reckon up, to impute. The Latin *deputo* signifies to think, judge, or esteem, to account or reckon, and to prune; but the Italian *deputare*, Spanish *deputar*, and French *deputer*, from the Latin word, all signify to send. How can the sense of *think*, and that of *lop or prune*, be deduced from a common root or radical sense? We find the solution of this question in the verb to *depute*. The primary sense is to throw, thrust, or send, or to act or lay, which is from throwing, driving. To *prune* is to separate, remove, or drive off; to force off; to *think* is a setting in the mind; to *compute* is to throw or put together, either in the mind or in numbers, to *dispute* is to throw against or apart, like *debate*, to beat from; to *impute* is to throw or put to or on; and to *repute* is to think or throw in the mind repeatedly. To *amputate* is to separate by cutting round. *Puto* then in Latin is from the same root, probably, as the English *put*, or the same word differently applied; and also the Dutch *poeten*, to plant, *poof*, a paw, a twig, or shoot, Gr. *φυειν*, &c.

In attempting to discover the primary sense of words, we are to carry our reflections back to the primitive state of mankind, and consider how rude men would effect their purposes, before the invention or use of the instruments which the moderns employ. The English verb to *cut*, signifies, ordinarily, to separate with an edged tool; and we are apt to consider this as the chief and original sense. But if so, how can *cut*, the stroke of a whip, which is a legitimate sense of the word, be deduced from the act of severing by an edged tool? We have, in this popular use of the word, a clue to guide us to the primary sense, which is, to drive, urge, press, and applied to the arm, to strike. But we have better evidence. In the popular practice of speaking, it is not uncommon to hear one person call to another when running, and say, *Cut on, cut on*.

## INTRODUCTION.

that is, hurry, run faster, drive, press on; probably from striking a beast which one rides on. This is the original sense of the word. Hence we see that this verb is the Latin *cado*, to strike, to cut down, somewhat differently applied, and *cado*, to fall, is only a modified sense of the same root, and the compounds *incido*, to cut, and *incido*, to fall on, are of one family. To *cut* is, therefore, primarily, to strike, or drive; and to *cut off*, if applied to the severing of bodies, before edged tools were used, was to force off, or to strike off; hence the sense of separating in the phrase to *cut off* a retreat or communication.

So the Latin *carpo* is the English *carve*, originally to separate by plucking, pulling, seizing and tearing, afterwards, by cutting.

*Asking* is usually expressed by the sense of *pressing, urging*. We have a clear proof of this in the Latin *peto* and its compounds. This verb signifies, primarily, to rush, to drive at, to assault; and this sense, in Dictionaries, ought to stand first in the order of definitions. We have the force of the original in the words *impetus* and *impetuous*. So the Latin *rogo* coincides in elements with *reach*.

The act of *understanding* is expressed by *reaching* or *taking, holding, sustaining*; the sense of *comprehend*, and of *understand*. We have a popular phrase which well expresses this sense, "I take your meaning or your idea." So in German, *begreifen*, to *begripe*, to apprehend.

*Knowing* seems to have the same radical sense as *understanding*.

*Pain, grief, distress*, and the like affections, are usually expressed by *pressure* or *straining*. *Affliction* is from *striking*.

*Joy, mirth*, and the like affections, are from the sense of *rouing, exciting, lively action*.

*Covering*, and the like actions, are from spreading over or cutting off, interruption.

*Hiding* is from covering or from withdrawing, departure; or concealment may be from withholding, restraining, suppressing, or making fast, as in the Latin *celo*.

*Heat* usually implies excitement; but as the effect of heat as well as of cold is sometimes to contract, we think both are sometimes from the same radical. Thus *cold* and the Lat *calco*, to be warm, and *callus* and *calleo*, to be hard, have all the same elementary letters, and we suppose them all to be from one root, the sense of which is, to draw, strain, shrink, contract. We are the more inclined to this opinion, for these words coincide with *callo*, to be strong or able, to know; a sense that implies straining and holding.

*Hope* is probably from reaching forward. We express strong desire by *longing*, reaching toward.

Earnestness, boldness, daring, peril, promptness, readiness, willingness, love and favour, are expressed by *advancing* or *inclining*.

*Light* is often expressed by opening, or the shooting of rays, radiation; and probably in many cases, the original word was applied to the dawn of day in the morning. *Whiteness* is often connected in origin with light. We have an instance of this in the Latin *caneo*, to shine and to be white.

And that the primary sense of this word is to shoot, to radiate, that is, to throw out or off, we have evidence in the verb *canto*, to sing, whence *canto*, the sense of which is retained in our popular use of *cant*; to *cant* a stone; to *cant* over a cask; gave the thing a *cant*; for all these words are from one stock.

The Latin *virtus*, the English *worth*, is from the root of *vireo*, to grow, that is, to stretch forward, to shoot; hence the original sense is strength, a sense we retain in its application to the qualities of plants. Hence the Latin sense of *virtus* is bravery, coinciding with the sense of *boldness*, a projecting forward.

*Pride* is from swelling or elevation, the primary sense of some other words nearly allied to it.

*Fear* is usually from *shaking* or from *shaking, trembling*; or sometimes, perhaps, from *striking*, a being struck, as with surprise.

*Holiness* and *sacredness* are sometimes expressed by *separation*, as from common things. The Teutonic word *holy*, however, seems to be from the sense of *soundness, entireness*.

*Faith* and *belief* seem to imply a resting, or a leaving. It

is certain that the English *belief* is a compound of the prefix *be* and *leaf*, leave, permission. To *believe* one, then, is to *leave* with him, to rest or suffer to rest with him, and hence not to dispute, contend or deny.

*Colour* may be from spreading over or putting on; but in some instances the primary sense is to *dip*. See *DYE* and *TINGE*.

*Spots* are from the sense of *separating* or from *sprinkling, dispersion*.

The radical sense of *making* is to press, drive, or force. We use *make* in its true literal sense, in the phrases, *Make your horse draw*, *Make your servant do what you wish*.

*Feeding* is from the sense of *pressing, crowding, stuffing*, that is, from *driving* or *thrusting*. *Eating* seems to have a somewhat different sense.

*Drinking* is from *drawing*, or from wetting, plunging. *Drench* and *drink* are radically one word.

*Anger*, and the like violent passions, imply excitement, or violent action. Hence their connection with *burning* or *inflammation*, the usual sense of which is *raging* or *violent commotion*.

*Agreement, harmony*, are usually from meeting, or union, or from extending, reaching to.

*Dwelling, abiding*, are from the sense of throwing or setting down, or resting, or from stretching; as we see by the Latin *continuo*, from *teneo*, Gr. *τενω*, to extend.

*Guarding* and *defending* are from roots that signify to *stop*, or to *cut off*; or more generally, from the sense of *driving off*, a repelling or striking back. In some cases perhaps from holding.

*Opposition* is usually expressed by meeting, and hence the prepositions which express opposition. Thus the Danish preposition *mod*, Swedish *mot* or *emot*, against, contrary, is the English word to *meet*.

Words which express *spirit*, denote, primarily, *breath, air, wind*, the radical sense of which is to *flow, move* or *rush*. Hence the connection, between *spirit* and *courage, animus, animosus*; hence passion, *animosity*. So in Greek *φρενις*, frenzy, is from *φρη*, the mind, or rather from its primary sense, a moving or rushing.

So in our mother tongue, *mod* is mind or spirit; whence *mood*, in English, and Saxon *moody*, moody, angry. Hence *mind* in the sense of *purpose*, its primary signification is a setting forward, as *intention* is from *intendo*, to stretch, to strain, the sense that ought to stand first in a Dictionary.

*Reproach, chiding, rebuke*, are from the sense of scolding, or throwing out words with violence.

*Sin* is generally from the sense of deviating, wandering, as is the practice of lewdness.

*Right, justice, equity*, are from the sense of stretching, making straight, or from laying, making smooth.

*Falseness* is from *falling, faulting*, or from *deviation, wandering, drawing aside*.

The primary sense of *strange* and *foreign*, is distant, and from some verb signifying to *depart*. *Wild* and *fierce* are from a like sense.

*Vain, vanity, wane*, and kindred words, are from *exhausting, drawing out*, or from *departing, withdrawing, falling away*.

*Paleness* is usually from *failure*, a departure of colour.

*Glory* is from opening, expanding, display, or making clear.

*Binding*, making fast or close, is from pressure, or straining.

*Writing* is from scratching, engraving, the sense of all primitive words which express this act.

A *crowd*, a *mass*, a *wood*, &c., are from collecting or pressing, or some allied signification.

*Vapour, steam, smoke*, are usually from verbs which signify to exhale or throw off.

*Stepping* seems to be from opening, expanding, stretching. Thus *passus* in Latin is from *pando*, to open, but this agrees in origin with *pateo*, and with the Greek *πατω*. *Gradus* in Latin coincides with the Welsh *rhawd*, a way, and this, when traced to its root, terminates in the Oriental *רחל* Chaldee, to open, stretch or expand; in Syriac, *ܪܚܐ* *radah*, to go, to pass. Walking may be sometimes from a like source; but

## INTRODUCTION.

the word *walk* signifies, primarily, to roll, press, work and fall as a hat, whence *walker* signifies a fuller.

*Softness* and *weakness* are usually named from *yielding, bending, withdrawing*, as is *relaxation*. Softness, however, is sometimes connected with smoothness, and perhaps with moisture.

*Sweetness* seems to have for its primary sense, either softness or smoothness.

*Roughness* is from sharp points, wrinkling or breaking; and *acidity* is from sharpness or pungency, and nearly allied to roughness.

*Death* is expressed by falling or departure; *life*, by fixedness or continuance, or from animation, excitement.

*Selling* is, primarily, a passing or transfer. *Sellan* in Saxon, signifies to give, as well as to sell.

A *coast* or *border* is usually the extreme point, from extending.

*Law* is from setting, establishing.

The primary sense of son, daughter, offspring, is usually a shoot, or as we say, *issue*. Hence in Hebrew בן *ben*, signifies both a son, a scion, a branch, and the young of other animals. A son, says Parkhurst, is from בנה *banah*, to build; and hence he infers that a son is so called, because he builds up or continues his father's house or family. But if so, how does the word apply to a branch, or an arrow? What do these build up? The mistake of this author, and of others, proceeds from their not understanding the original meaning of the verb, which is not to erect, or elevate, but to throw, to set, to found; and this verb is probably retained in our word *found*. A son is that which is thrown or shot out; a scion or branch is the same, an *offset*, one an *offset* of the human body, the other of a plant, and an arrow is that which is shot or thrown. Hence, probably, the Hebrew עֵבֶן *eben* or *even*, a stone, W. *maen* or *vaen*, that which is set, so named from its compactness or

hardness. And in Arabic اَبَان *abana*, signifies to think, Lat. *opinor*, that is, to set in the mind.

*Few* and *small* are senses often expressed by the same word. Thus, although *few* in English expresses merely a small number, yet the same word in French, *peu*, and in the Italian, *poco*, signifies little in quantity, as well as few in number.

*Cause* is from the sense of *urging, pressing, impelling*. Hence it well expresses that which produces an effect; and hence it is peculiarly expressive of that by which a man seeks to obtain a claim in law. A *cause* in court is properly a *pressing for right*, like *action* from *ago*; and *prosecution* from the Latin *sequor*, which is our word *seek*. Hence the Latin *accuso*, to accuse, to throw upon, to press or load with a charge. The Saxon *saca*, contention, suit in law, is synonymous with *cause*, and from the root of *seek, sequor*. It is the English *sake*.

The word *thing* is nearly synonymous with *cause* and *sake*. See *THING* in the Dictionary.

The primary sense of *time, luck, chance, fortune*, is to fall, to come, to arrive, to happen. *Tide, time* and *season*, have a like original sense. *Tide*, in Saxon, is *time*, not a flow of the sea, the latter being a secondary and modern application of the word. This primary signification of time will unfold to us why the Latin *tempora* should signify times and the temples. It seems that *tempora* are the falls of the head. Hence, also, we understand why *tempest* is naturally deducible from *tempus*, as the primary sense is to fall, to rush. Hence *tempestuous*, seasonable, that comes in good time. *Season* has a like sense.

Hence, also, we are led to understand, what has seemed inexplicable, how the French *heureux*, lucky, happy, can be regularly deduced from *heure*, an hour. We find that in Greek and Latin the primary sense of *hour* is *time*, and *time* is a coming, a falling, a happening, like the English *luck*, and hence the sense of lucky; hence fortunate and happy. The word *fortunate* is precisely of the same character.

The primary sense of the Shemitic דָּבַר *davar*, or *thavar*, corresponds almost precisely with that of *cause* and *thing* in English, that is, to strain, urge, drive, fall or rush. Hence it signifies to speak, and in Ch. and Syr. to lead, to direct, to govern. As a noun, it signifies a word, that which is uttered; a thing, cause or matter, that is, that which happens or falls,

like *event* from *evenio*; also a plague, or great calamity, that is, that which falls or comes on man or beast, like *plague*, a stroke or affliction, from striking. And it may be observed, that if the first letter is a prefix answering to the Gothic *du*, Saxon and English *to*, in the Saxon *to-arisan*, to drive, then the root *ar* coincides exactly with the Welsh *peri*, to command, which is retained in composition in the Lat. *impero*. Indeed if the first syllable of *guberno* is a prefix, the root of this word may be the same. The object, however, for which this word is here mentioned, is chiefly to show the uniformity which men have observed in expressing their ideas; making use of the same visible physical action to represent the operations of the mind and moral ideas.

*Silence, deafness, dumbness*, are from *stopping, holding, or making fast*.

*War* is from the sense of *striving, driving, struggling*.

*Good* is generally from *enlarging, or advancing*, like *prosperous*.

*Evil* is from wandering, departing, or sometimes from softness, weakness, flowing or fluxibility, as is the case with the Latin *malum*, from the Welsh *mall*.

The primary sense of the names of natural and material objects cannot always be ascertained. The reasons are obvious. Some of these names are detached branches of a family of words which no longer form a part of our language; the verb and all the derivatives, except a single name, being extinct, or found only in some remote country. Others of these names have suffered such changes of orthography, that it is difficult or impossible to ascertain the primary or radical letters, and of course the family to which they belong. Numerous examples of such words occur in English, as in every other language.

But from such facts as have occurred to us in our researches, we may venture to affirm with confidence, that most names of natural objects are taken from some obvious quality or action, or some supposed quality of the thing; or from the particular action or operation by which it is produced. Thus *tumours* are named from *pushing, or swelling*; and *redness, or red*, seems, in some instances at least, to be named from *eruptions* on the body. The human body is named from *shaping*, that is, *setting, fixing, or extending*, and hence sometimes, the general name of the human race. The arm is a *shoot*, a *push*, as is the branch of a tree. A board, a table, a floor, is from *spreading, or expanding, extending*. Skin and bark are from *peeling, stripping, &c.*

The names of particular animals and plants cannot always be traced to their source; but as far as we have been able to discover their origin, we find animals to be generally named from some striking characteristic of external appearance, from the voice, from habits of life, or from their office. There is reason for believing that the Greek *εργατος* and Latin *struthio*, or ostrich, is from the same root as the English *strut*, the strutter; the primary sense of which root is, to stretch, which explains all the senses of the Greek and Latin words of this family. It is certain that the *crow* is named from its cry, and the *leopard* from his spots.

Thus plants were named from their qualities: some from their form, others from their colour, others from their effects, others from the place of their growth. The English *root*, Lat. *radix*, is only a particular application of *rod* and *ray, radius*; that is, a shoot. *Spurge* is, undoubtedly, from the root of the Latin *pargo*.

There is reason to think that many names of plants were originally adjectives, expressing their qualities, or the name was a compound, used for the same purpose, one part of which has been dropped, and the other remaining as the name of the plant. Thus *pine, pinus*, is from *pin, pinna, penna*; for in Welsh *pin* is a *pin* and a *pen* or style for writing, and *pinbren* is a pine-tree. The tree then was named from its leaf.

*Fir* has a similar origin and signification.

It is probable or rather certain that some natural objects, as plants and minerals, received their names from their supposed qualities; as in ages of ignorance and superstition, men might ascribe effects to them, by mistake. The whole history of magic and enchantment leads us to this conclusion.

Minerals are, in many instances, named from their obvious qualities, as *gold* from its yellowness, and *iron* from its hard-

## INTRODUCTION.

ness. The names can, in some cases, be traced to their original, as that of *gold* and of the Latin *ferrum*; but many of them are not easily ascertained. Indeed, the greatest part of the specific names of animals, plants, and minerals, appear to be obscure. Some of them appear to have no connection with any family of words in our language, and many of them are derived to us from Asia, and from roots which can be found only, if found at all, in the Asiatic languages.

These observations and explanations will be sufficient to show the importance of developing, as far as possible, the origin of words, and of comparing the different uses of the same word in different languages, in order to understand either the philosophy of speech, or the real force and signification of words in their practical application.

If it should be found to be true, that many of the Shemitic verbs are formed with prefixes, like those of the European languages, this may lead to new illustrations of the original languages of the Scriptures. In order to determine this fact, it will be useful to examine whether the Chaldee and Hebrew  $\alpha$  is not often a prefix answering to *he* in the Teutonic languages; whether  $\alpha$  and  $\beta$  are not prefixes answering to the *ga* and *ge* of the Gothic and Teutonic; whether  $\gamma$ ,  $\delta$  and  $\epsilon$ , and  $\zeta$ , a dialectical form of  $\delta$ , do not coincide with the Gothic *du*, the Saxon *to*, the Dutch *toe*, and the German *zu*; whether  $\eta$  does not answer to the Russ. and Dutch *na*, the German *nach*; and whether  $\theta$  and  $\varphi$  do not answer to *s*, *sh*, and *sch* in the modern English and German.

If many of the Shemitic trilateral verbs are compound, it follows that the primary radix has not been detected. At any rate, we have no hesitation in affirming that the primary sense of many of the roots in the Shemitic languages, that sense which is almost indispensable to an understanding of many obscure passages in the Scriptures, has been hitherto overlooked or mistaken. In order fully to comprehend many uses of the words, it will be necessary to compare them with the uses of the words of the same family in the modern languages, and this comparison must be far more extensive than any hitherto made, and conducted on principles which have not been before duly appreciated and applied.

We have introduced the foregoing comparative view of the several significations of the same word in different languages, not merely to illustrate the general principles of language, but with a special reference to an explanation of the etymologies which occur in this work.

The results of the foregoing remarks and illustrations may be thus recapitulated.

1. The nations which now constitute the distinct families or races of Japheth and Shem, are descendants of the common family which inhabited the plain of Shinar before the dispersion.

2. The families at the dispersion retained a large proportion of the words which were in common use before that event, and the same were conveyed to their posterity. In the course of time, some of these words were dropped by one family or tribe, and some by another, till very few of them are retained in their original form and signification, by all the nations which have sprung from the main stock. A few of them, however, are still found in all or nearly all the languages which we have examined, bearing nearly the same signification and easily recognized as identical.

3. Although few of the primitive words can now be recognized as existing in *all* the languages, yet as we better understand the changes which have been made in the orthography and signification of the same radical words, the more affinities are discovered; and particularly, when we understand the *primary* sense, we find this to unite words whose *appropriate* or *customary* significations appear to have no connection.

4. A great number of the primitive radical words are found in compounds, formed in different languages, with different affixes and prefixes, which obscure the affinity. Thus *veritas* in Latin, is *wahrheit* in German; the first syllable in each is the same word, the last different. In other instances, both difference of orthography, of formation and of application, concur to obscure the affinity of words. Thus, the English word *strong* is in Danish *stræng*, signifying stern, severe, rigid, strict; and *strengheit*, [stronghood,] is severity, rigour, strict-

ness. Now *st* in these words is not radical; remove this letter and we have *strog*, *streg*, which coincide with the Latin *stringo*, *strictus*; and these words are found to be from the same radix, which signifies to draw, to strain, to stretch.

5. It appears that *b*, *p*, and *f* are often prefixes, either the remains of prepositions, or casual additions to words, introduced by peculiar modes of pronunciation, which prefixes now precede consonants, with which they readily coalesce in pronunciation, as *l* and *r*, forming trilateral words on biliteral roots; as in *block* from *lloc*, or *lock*; *play*, Saxon *plegan*, from *ley* or *lek*, Swedish *leka*, Dan. *leger*; *flow*, Lat. *fluvi*, from *lug*, or *luc*, which appears in *light*, *lux*, *luceo*, and in *lug*, a river, retained in *Lugdunum*.

6. It appears also, that *c* or *k* and *g*, are often prefixes before the same consonants, *l* and *r*, as in Lat. *cluvia*, Eng. *loin*; W. *clod*, praise, from *llod*, Latin *laus*, laudo; German *gluck*, English *luck*; Lat. *gratia*, W. *rhad*.

7. It appears also, that *s* is a prefix in a vast number of words, as in *speed*, *spoil*, *swell*, *sweep*; and it is very evident that *st* are prefixed to many words whose original, radical, initial consonant was *r*, as in *straight*, *strict*, *strong*, *stretch*, from the root of *right*, *rectus*, *reach*, and in *stride*, from the root of the Latin *gradior*, W. *rhaz*.

If these inferences are just, as we are persuaded they are, it follows that there\* is a more near resemblance and a much closer affinity between the languages of Europe and of Western Asia, than has hitherto been supposed to exist. It follows also, that some of the most important principles or rudiments of language have hitherto escaped observation, and that philology is yet in its infancy. Should this prove, on further examination, to be the state of philology, it is reserved for future investigators to examine the original languages of the Scriptures on new principles, which may serve to illustrate some obscure and difficult passages, not hitherto explained to the general satisfaction of critics and commentators.

### PROGRESS AND CHANGES OF THE ENGLISH LANGUAGE.

It has been already observed that the mother tongue of the English is the Anglo-Saxon. The following are specimens of that language as it was spoken or written in England before the Norman conquest. The first is from the Saxon Chronicle. The original is in one column, and the literal translation in the other. The English words in italics are Saxon words. The number of these will show how large a proportion of the words is retained in the present English.

The following specimen is from the Anglo-Saxon version of Orosius, supposed to be made by King Alfred.

He said though, that that land

part dwell, for hunting in  
winter, and in summer for  
fishing in that sea, [by the  
sea.] He said that he, at  
some time, would find how  
long that land lay right north.

This language, with some words introduced by the Danes, continued to be used by the English till the Norman Conquest. After that event, great numbers of Saxon words went into disuse, not suddenly, but gradually, and French and Latin words were continually added to the language, till it began to assume its present form, in the fourteenth and fifteenth centuries. Yet the writings of Gower and Chaucer cannot now be fully understood without a glossary.

But it was not in the loss of native Saxon words and the accession of French and Latin words alone, that the change of our language consisted. Most important alterations were made in the sounds of the vowels. It is probable, if not certain, that our first vowel *a* had usually or always the broad sound, as we now pronounce it in *fall*, or in some words perhaps the Italian sound, as it is now called, and as we pronounce it in *ask*. The sound of *e* was probably nearly the same as it is in French and Italian, and in the northern languages on the continent of Europe; which is nearly that of *a* in *favour*. The Saxon sound of *i* was probably the same as it is still on the Continent, the sound of *ee* or long *e*. The sound of *u* was that of our present *oo*, French *ou*, the sound it still has in Italian, and in most countries on the European continent. It is probable that the change of the sound of *u* happened in consequence of the prevalence of the French pronunciation after the Conquest; for the present sound of *u* may be considered as intermediate, between the full sound of *oo*, or French *ou*, and the French sound of *u*.

These changes, and the various sounds given to the same character, now serve to perplex foreigners, when learning English; and tend, in no small degree, to retard or limit the extension of our language. This is an unfortunate circumstance, not only in obstructing the progress of science, but of Christianity.

The principal changes in the articulations are the use of *k* for *c*, as in *look* for *locian*; the loss of *h* before *l*, as in *loof* from *hlaf*, *lot* for *hlot*, *lean* for *hlean*; and the entire loss of the prefix *ge* or *ga*, as in *deal* for *gr-dalan*, *deem* for *gedeman*; and of *to* as a prefix, as in *to-helpen*, to help; *to-dailan*, to deal. In no instance do we feel more sensibly the change of sounds in the vowels, than in that of *i*, which in French, Spanish, and Italian, is *e* long; for in consequence of this, persons who are not acquainted with these foreign languages, mispronounce such words as *marino*, *Messina*, *Lima*, giving to *i* its English sound, when in fact the words are to be pronounced *mareeno*, *Messeena*, *Leeema*.

In grammatical structure the language has suffered considerable alterations. In our mother tongue, nouns were varied to form cases, somewhat as in Latin. This declension of nouns has entirely ceased, except in the possessive or genitive case, in which an apostrophe before *s* has been substituted for the regular Saxon termination *es*. Some of our pronouns retain their declensions, somewhat varied. The plural termination in *en* has been dropped, in a number of words, and the regular plural termination been substituted, as *houses* for *housen*.

In most cases, the Saxon termination of the infinitive mode of verbs has been dropped, and for *gifan* we now write, *to give*. The variations of the verb, in the several persons, have been materially changed. Thus for the Saxon—

Ic lufige,	We lufiath,
Thu lufast,	Ge lufiath,
He lufath.	Hl lufiath.

we now write—

I love,	We love,
Thou lovest,	Ye love,
He loveth or loves.	They love.

In the Saxon plural, however, we see the origin of the vulgar practice, still retained in some parts of England. *We loves*, *they loves*, which are contractions of *lufiath*.

In the substantive verb, our common people universally, and most persons of better education, unless they have rejected their traditional language, retain the Gothic dialect, in the past tense.

I was,	We was,
Thou wast,	Ye was,
He was.	They was.

## INTRODUCTION.

However people may be ridiculed for this language, it is of genuine origin, as old as the Saxon word *were*. In Gothic the past tense runs thus —

Ik was,	Weiſ weſum,
Thu waſt,	Yus weſuht,
Is was.	Eiſ weſun.*

In the present tense of the substantive verb, our common people use *ānt*, as in this phrase: "he *ānt* present." This is evidently a contraction of the Swedish and Danish *är, er*, present indicative singular of the substantive verb *vara* or *verer*, to be, which we retain in *are* and *were*. In Swedish, *han är*, and in Danish, *han er*, he is. Hence he *er* not or *ar* not, contracted into he *ānt* or *ant*.

These facts serve to show how far the Gothic dialect has been infused into the English language.

It would be tedious, and to most readers uninteresting, to recite all the changes in the forms of words or the structure of sentences which have taken place since the Norman conquest. Since the invention of printing, changes in the language have been less rapid than before; but no art nor effort can completely arrest alterations in a living language. The distinguished writers in the age of Queen Elizabeth improved the language, but could not give it stability. Many words then in common use are now obsolete, or have suffered a change of signification. In the period between Queen Elizabeth and the beginning of the eighteenth century, the language was improved in grammar, orthography, and style. The writers in the reign of Queen Anne and of George I. brought the language nearly to perfection; and if any improvement has since been made, it is in the style or diction, by a better selection of words, and the use of terms in science and philosophy with more precision.

In regard to grammatical construction, the language, for half a century past, has, in our apprehension, been suffering deterioration, at least as far as regards its written form. This change may be attributed chiefly to the influence of the learned Bishop Lowth, whose Grammar made its appearance nearly seventy years ago. We refer particularly to his form of the verb, which was adjusted to the taste of writers in the age of Queen Elizabeth, instead of the practice of authors in the age of William and Mary, Queen Anne, and George I. Hence he gives for the form of the verb in the subjunctive mood, after the words which express a condition, *if, though, &c. I love, thou love, he love*, observing in a note that in the subjunctive mood, the event being spoken of under a condition or supposition, or in the form of a wish, and therefore doubtful and contingent, the verb itself in the present, and the auxiliary both of the present and past imperfect times, often carry with them somewhat of a future sense; as, "If he come to-morrow, I may speak to him"—"If he should come, I should speak to him." This is true; but for that very reason, this form of the verb belongs to the future tense, or should be arranged as such in Grammars. *If he come*, would be in Latin *si venerit*, in the subjunctive future.

But the learned author has entirely overlooked the important distinction between an event or fact, of uncertain existence in the present time, and which is mentioned under the condition of present existence, and a future contingent event. "If the mail that has arrived contains a letter for me, I shall soon receive it," is a phrase that refers to the present time, and expresses an uncertainty in my mind, respecting the fact. "If the mail contain a letter for me," refers to a future time, that is, "If the mail of to-morrow contain [shall or should contain] a letter for me." The first event, conditional or hypothetical, should be expressed by the indicative mood, and the latter by the subjunctive future. The Saxon form of the verb, *if he slay, if he go*, is evidently a contingent future, and is so used in the laws.

This distinction, one of the most important in the language, has been so totally overlooked, that no provision has been

\* This is probably the Latin *esse*. The Latins dropped the first articulation *e*, which answers to our *is*.

The present tense, indicative mood, of the Latin verb, with the *r* restored, would be written thus—

Ego vesum,	Nos vesumus. [was,]
Tu ves,	Vos vesitis. [was,]
Ille vesit.	Illi vesunt. [was,]

made for it in English Grammars: nor is the distinction expressed by the form of the verb, as used by a great part of the best writers. On the other hand they continually use one form of the verb to express both senses. The fact is the same in the common version of the Scriptures. *If he go, if he speak*, sometimes express a present conditional tense, and sometimes a contingent future. In general this subjunctive form of the verb in Scripture, expresses future time. "If he thus say, I have no delight in thee," expresses a future contingent event; 2 Sam. xv. 26. "If iniquity be in thine hand, put it far away," expresses a fact, under a condition, in the present time; Job xi. 14.

In many instances the translators have deviated from the original, in using the subjunctive form of the English verb to express what in Greek is expressed in the indicative. Thus Matthew iv. 6. *Εἰ υἱός ἐστι τοῦ Θεοῦ*, If thou be [art] the son of God.

Ch. v. 29 and 30. *Εἰ δὲ ὁ ὀφθαλμός σου ὁ δεξιὸς σκανδαλίζει σε*, If thy right eye offend [offendeth thee]; *Εἰ ἡ δεξιὰ σου χυμὶ σκανδαλίζει σε*, If thy right hand offend [offendeth] thee.

So also in chapter xviii. 8 and 9.

Ch. xii. 26. *Εἰ ὁ Σατανὰς τὸν Σατανὰν ἐμβαλεῖ*, If Satan cast [casteth] out Satan.

Ch. xix. 10. *Εἰ οὗτος ἐστὶ ἡ αἰτία τοῦ ἀνθρώπου μετα της γυναίκας*, If the case of the man be [is] so with his wife.

Ch. xxii. 45. *Εἰ σὺν Δαβὶδ καλεῖ αὐτὸν Κύριον*, If David then call [calleth] him Lord.

2 Cor. iv. 16. *Εἰ οὖν ἡμῶν ἀνθρώπος διαφθείρεται*, Though our outward man perish [perishes, or is perishing].

In all these passages, the English verb, in the subjunctive, properly expresses a conditional, contingent or hypothetical future tense, contrary to the sense of the original, except in the last passage cited, where the apostle evidently speaks of the perishing of the outward man as a fact admitted, which renders the translation still more improper.

Let us now attend to the following passages.

Matthew vii. 9. *Ὡς τις ἐστιν ἐξ ὑμῶν ἀνθρώπων, οὗ ἐστιν αἰτήσας τὸν υἱὸν αὐτοῦ ἀπτοῦ*. Or what man is there of you, whom if his son ask [shall ask] bread, will he give him a stone?

*Καὶ τίς ἐστιν ἐξ ὑμῶν ἀνθρώπων, οὗ ἐστιν αἰτήσας τὸν υἱὸν αὐτοῦ ἀπτοῦ*, If he ask [shall ask] a fish, will he give him a serpent?

Here the original tense is varied to express a future or hypothetical event, yet the verb in English is in the same tense as in the first class of examples; and what renders the version more objectionable is, that the verb in the first clause does not correspond with that in the second clause. There is no possible way of making good English of the translation, but by supposing the verb in the first clause *ask*, to be in the future tense. So it would be in Latin, and so it is, "*si petierit*." If thy son shall ask (or should ask) a fish, will he give (or would he give) him a serpent?

This fault runs through the whole English version of the Scriptures, and a distinction of tenses clearly marked in the original languages, is generally neglected in the translation.

1 Tim. v. 4. *Εἰ τις τῶν χηρῶν τέκνα ἢ ἐκγόνα ἔχει*, If any widow have [has] children or nephews.

Vers. 8. *Εἰ τις τῶν δούλων καὶ μαλίστα τῶν οἰκτῶν οὐ προνοεῖ*, If any provide [provideth] not for his own, and especially for those of his own house.

This subjunctive form of the verb, *if he be; if he have; if he go; if he say; if thou write; whether thou see; though he fall*, which was generally used by the writers of the sixteenth century, was in a great measure discarded before the time of Addison. Whether this change was in consequence of the prevalence of colloquial usage over grammar rules, or because discerning men perceived the impropriety and inconsistency of the language of books, I pretend not to determine. Certain it is, that Locke, Watts, Addison, Pope, and other authors of the first distinction, who adorned the close of the seventeenth and beginning of the eighteenth century, generally used the indicative mood to express condition, uncertainty, and hypothesis in the present and past tenses. Thus Locke writes—"If these two prepositions are by nature imprinted." "If principles are innate." "If any person hath never examined this notion." "Whether that substance thinks or no." "If the soul doth think in sleep." "If one considers well these men's way of speaking." "If he does not reflect." "Unless

## INTRODUCTION.

that notion produces a constant train of successive ideas." "If your lordship means." Such is the language of *Locke*.

Now, what is remarkable, the learned Dr. Lowth, the very author who has, by his Grammar, done much to sanction the subjunctive form of the verb, in such cases, often uses the indicative in his own writings. "If he does not carefully attend to this—if this pleasure arises from the shape of the composition—if this is not firmly and well established." These verbs are in contradiction of his own principles.

On Isaiah. Prelim. Diss.

Addison. "If the reader has a mind to see a father of the same stamp." "If exercise throws off all superfluities—if it clears the vessels—if it dissipates a growing distemper." Such is the language of Addison, the most elegant writer of the genuine English idiom in the nation.

"If the thief is poor—if it obliges me to be conversant with scenes of wretchedness." Wilberforce.

"If America is not to be conquered." Lord Chatham.  
 "If we are to be satisfied with assertions." "If it gives blind confidence to any executive government." "If such an opinion has gone forth." "If our conduct has been marked with vigour and wisdom." For.

"If my bodily strength is equal to the task." "A negro, if he works for himself and not for a master, will do double the work." "If there is any aggravation of our guilt." "If their conduct displays no true wisdom." "The honourable gentleman may, if he chooses, have the journals read again." "Whether this is a sufficient tie to unite them." "If this measure comes recommended." "If there exists a country which contains the means of protection." Pitt.

"If the prudence of reserve and decorum dictates silence." "If an assembly is viciously or feebly composed." "If any persons are to make good deficiencies." "If the King of the French has really deserved these murderous attempts." "If this representation of M. Necker was false." "Whether the system, if it deserves the name." "The politician looks for a power that our workmen call a purchase, and if he finds the power." "If he feels as men commonly feel." Burke.

"If climate has such an effect on mankind." "If the effects of climate are casual." Core's Russ.

"If he finds his collection too small." "If he thinks his judgment not sufficiently enlightened." "Whether it leads to truth." "If he warns others against his own failings." This is generally the language of *Johnson*.

In regard to this distinguished author, we would observe that, except the substantive verb, there is in his Rambler but a single instance of the subjunctive form of the verb in conditional sentences. In all other cases the use of the indicative is uniform.

But neither the authors here mentioned, nor most others, even the most distinguished for erudition, are uniform and consistent with themselves in the use of the tenses. In one sentence we find the indicative used, "If it is to be discovered only by the experiment." "If other indications are to be found." In the next sentence, "If to miscarry in an attempt be a proof of having mistaken the direction of genius." *Johnson*.

"If the former be refined—if those virtues are accompanied with equal abilities." Gibbon.

"If love reward him, or if vengeance strike." Corper.  
 "Or if it does not brand him to the last." Id.

"If he is a pagan—if endeavours are used—if the person hath a liberal education—if man be subject to these miseries." Milton.

The following expressions occur in Pope's Preface to Homer's Iliad, in the compass of thirteen lines.

"If he has given a regular catalogue of an army."  
 "If he has funeral games for Patroclus."  
 "If Ulysses visit the shades."  
 "If he be detained from his return."  
 "If Achilles be absent."  
 "If he gives his hero a suit of celestial armour."

We recollect one English author only, who has been careful to avoid this inconsistency; this is Gregory, who, in his *Economy of Nature*, has uniformly used the indicative form of the verb in conditional sentences of this kind.

The propriety of using the indicative form of the verb to express a present or past event conditionally, does not rest

solely on usage; it is most correct upon principle. It is well known that most of the words which are used to introduce a condition or hypothesis, and called, most improperly, conjunctions, are verbs, having not the least affinity to the class of words used to connect sentences. *If* is the Saxon *gif*, *give*, having lost its first letter; *if* for the ancient *iff*. *Though* is also a verb now obsolete, except in the imperative mood. Now let us analyze this conditional tense of the verb. "If the man knows his true interest, he will avoid a quarrel." Here is an omission of the word *that* after *if*. The true original phrase was, "If that the man knows his true interest, he will avoid a quarrel"—that is, *give that* [admit the fact which is expressed in the following clause,] *the man knows his true interest*, then the consequence follows, *he will avoid a quarrel*. *That* in this sentence is a relative or demonstrative substitute for the following clause. This will more plainly appear by transposing the clauses. "The man knows his true interest; give that [admit that;] he will then avoid a quarrel." Now let the subjunctive form be used. "The man know his true interest; give that; he will avoid a quarrel."

Here the impropriety of this form of the verb appears in a strong light. It will appear more clearly by the use of other words of equivalent signification. *Grant* the man *know* his true interest, he will avoid a quarrel. *Allow* the man *know* his true interest. *Suppose* the man *know* his true interest. We never use the subjunctive form after the three last verbs which introduce the condition. *Though* is sometimes followed by the indicative; sometimes by the subjunctive; but it ought always to be followed by the indicative, for it supposes the fact to be given; and so does *admit*, when used in hypothetical sentences. Admit that the man *knows* his interest. We have then decisive proof that the use of the indicative form of the verb after *if*, when it expresses a conditional event in present time, is most correct; indeed, it is the only correct form. This remark is equally applicable to the past tense conditional.

The language of Addison, Johnson, and other distinguished writers of the last century, in the use of the indicative, is therefore more correct than the language of the writers in the age of Elizabeth.

We consider that general and respectable usage in speaking is the genuine or legitimate language of a country, to which the written language ought to be conformed. Language is that which is uttered by the tongue, and if men do not write the language as it is spoken by the great body of respectable people, they do not write the real language. Now, in colloquial usage, the subjunctive form of the verb, in conditional sentences, is rarely used, and perhaps never, except when the substantive verb is employed. Our students are taught in school the subjunctive form, *if thou have, if he come, &c.*, and some of them continue, in after life, to write in that manner; but in the course of more than forty years, we have not known three men who have ventured to use that form of the verb in conversation. We toil in school to learn a language which we dare not introduce into conversation, but which the force of custom compels us to abandon. In this respect, the present study of grammar is worse than useless.

This colloquial custom accords with other languages. The French say and write *s'il est*, if he is. The Latins often used the same form, "*si quid est* in me ingenii, judices;" but the use of the Latin subjunctive depends on certain other words which precede; as "*cum sit civis*," as he is a citizen, or since he is a citizen; and the present tense is often used to express what we express by an auxiliary. That the Greeks used the indicative to express a conditional present tense, we have seen by citations above.

By this arrangement of the verb, the indicative form after *if* and other verbs introducing a condition or hypothesis, may be used uniformly to express a fact or event under a condition or supposition, either in the present or past tenses; the speaker being uncertain respecting the fact, or representing it as doubtful.

"If the man is honest, he will return what he has borrowed."  
 "If the ship has arrived, we shall be informed of it tomorrow."  
 "If the bill was presented, it was doubtless paid."  
 "If the law has been passed, we are precluded from further opposition."

## INTRODUCTION.

On the other hand, when it is intended to speak of a future contingent event, we would always use the auxiliaries that are proper for the purpose. "If it *shall* or *should* rain to-morrow, we shall not ride to town." We would never use the subjunctive form, *if it rain*, in prose; and in poetry, only from necessity, as an abridged phrase, for if it *shall* or *should* rain. In this manner the distinction between the tenses, which are now constantly confounded, may be preserved and made obvious, both to natives and foreigners.

The effect of the study of Lowth's principles, which has been greatly extended by the popularity of Murray's Grammar,\* has been to introduce or establish a form of the verb in writing, which is obsolete in colloquial language; to fill our books with a confusion of tenses, and thus to keep the language unsettled. Nothing can be more perplexing to the student, than every where to meet with discrepancies between rules and practice.

There is another erroneous manner of writing, common to the best authors in the language, which seems to have escaped notice. This is, to connect a verb in the past tense with a preceding one in the same tense, when the latter verb is intended to express a very different time from the former. Thus, "Then Manasseh *knew* that the Lord, he *was* God;" 2 Chron. xxxiii. 13.

The Latins, in this case, would probably have used the infinitive; "Manasseh novit Jehovam Deum esse." In English we ought to write and say, "Manasseh *knew* Jehovah to be God," or, "Manasseh *knew* that Jehovah he *is* God." In most similar cases the use of the infinitive in English is as elegant as in Latin. But there are many cases where the infinitive cannot be used. We cannot use it after *say*; "he *said* him to be a good man," is not English; though "he *declared*, or *affirmed*, or *believed* him to be a good man," is elegant.

In order to understand the impropriety of the common mode of using the latter verb, as in the example above cited, it may be remarked, that the present tense is that which is used to express what exists at all times. Thus we say, *God is* or *exists*, whenever we speak of his permanent existence; we say, *Gold is* yellow or ductile; iron *is* a most valuable metal; it *is* not convertible into silver; plants and animals *are* very distinct living beings. We do not say, *Gold was* yellow; iron *was* a valuable metal; for we mean to express permanent qualities. Hence, in the passage cited from Chronicles, the first verb *knew*, referring to a fact past, is correct; but the last, which is intended to express the permanent being or character of God, should be in the infinitive or the indicative present tense. The following are examples of correct language: "His master had *taught* him that happiness *consists* in virtue."

"Sabellius, who openly *taught* that there *is* but one person in the Godhead."

"Our Saviour *taught* that eternal death *is* the proper punishment of sin."

But very different is the following: "Having believed for many years, that water *was* [is] an elastic fluid." The following would be still better: "Having believed water to be an elastic fluid."

So the following: "We know not the use of the epidermis of shells. Some authors have *supposed* that it *secured* [secures] the shells from being covered with vermes."

"It *was* just *remarked*, that marine fossils *did* not [do not] comprise vegetable remains."

"If my readers will turn their thoughts back on their old friends, they will find it difficult to call a single man to remembrance who *appeared* to know that life *was* short [is short,] till he was about to lose it."

"They considered the body as a hydraulic machine, and the fluids as passing through a series of chemical changes; forgetting that animation *was* [is] its essential characteristic."

"It *was* *declared* by Pompey, that if the Commonwealth

*was* [should be] violated, he could stamp with his foot and raise an army out of the ground."

In the foregoing sentence, the past tense is used for the future contingent.

"It was affirmed in the last discourse, that much of the honourable practice of the world *rested* [rests] on the substratum of selfishness; that society *was* [is] held together, in the exercise of its relative virtues, mainly by the tie of reciprocal advantage; that a man's own interest *bound* [binds] him to all those average equities which *obtained* [obtain] in the neighbourhood around him; and in which if he *proved* [should prove] himself glaringly deficient, he would be abandoned by the respect, and the confidence, and the good will of the people with whom he *had* [might have, or should have] to do."

"In the last discourse, I observed that love *constituted* [constitutes] the whole moral character of God."

"And he said, Nay, father Abraham; but if one *went* [shall or should go] to them from the dead, they will repent. And he said to him, If they hear not Moses and the prophets, neither will they be persuaded though one *rose* [shall or should rise] from the dead;" Luke xvi. 30, 31.

"Cicero vindicated the truth, and inculcated the value of the precept, that nothing *was* [is] truly useful which *was* [is] not honest."

"He undertook to show that justice *was* [is] of perpetual obligation."

"The author concedes much of his argument, and admits that the sea *was* [is] susceptible of dominion." [Better still; he admits the sea to be susceptible of dominion.]

"A nation would be condemned by the impartial voice of mankind, if it voluntarily *went* [should go] to war, on a claim of which it *doubted* [should doubt] the legality."

"He held that the law of nations *prohibited* [prohibits] the use of poisoned arms."

"He insisted that the laws of war *gave* [give] no other power over a captive than to keep him safely."

"The general principle on the subject is, that, if a commander *makes* a compact with the enemy, and it *be* of such a nature that the power to make it *could be* reasonably implied from the nature of the trust, it *would be* valid and binding, though he *abused* his trust." Let any man translate this sentence into another language, if he can, without reducing the verbs to some consistency.

"From his past designs and administrations, we could never argue at all to those which *were* future." [This is an odd combination of words.]

"Jesus knowing that the father had given all things into his hands, and that he was come from God and *went* to God;" John xiii. 3.

"Alexander dispatched Eumenes with three hundred horse to two free cities—with assurance that if they *submitted* and *received* him [should or would submit and receive] as a friend, no evil *should befall* them."

"The apostle *knew* that the present season *was* [is] the only time allowed for this preparation."

"What would be the real effect of that overpowering evidence which our adversaries *required* [should require] in a revelation, it is difficult to *foretell*."

"It could not otherwise have been known that the word *had* [has] this meaning."

"I told him if he *went* [should go] to-morrow, I would go with him."

This fault occurs in our hearing every hour in the day. A like fault prevails in other languages; indeed the English may have been led into it by reading foreign authors. "Mais on a remarqué avec raison, que l'espace conchoidal *était* infini." Lamiér. It has been remarked with reason, that the conchoidal space *was* [is] infinite.

But whatever may be the practice of other nations, there would be no difficulty in correcting such improprieties in our own language, if as much attention were given to the study of its true principles, as is given to other subjects of literature and science. But if in this particular, there is an English author who writes his vernacular language correctly, his writings have not fallen under our inspection.

\* Lindley Murray, in the Introduction to his Grammar, acknowledges, in general terms, that "the authors to whom the grammatical part of this compilation is principally indebted for its materials are, Harris, Johnson, Lowth, Priestley, Beattie, Sheridan, Walker, and Coote." But on examination it appears that the greatest portion of the grammatical part is from Lowth, whose principles form the main structure of Murray's compilation. Some valuable notes and remarks are taken from Priestley's Grammar.

## INTRODUCTION.

There is another fault very common among English writers, this is the conversion of an intransitive verb into a passive one. It is surprising that an error of this kind should have gained such an established use, in some foreign languages, as to be incurable. Barbarous nations may indeed form languages; but it should be the business of civilized men to purify their language from barbarisms.

In the transitive verb, there is an agent that performs some action on an object, or in some way affects it. When this verb becomes passive, the agent and the object change places in the sentence. Thus, *John loves Peter*, is transitive, but *Peter is loved by John*, is passive. In the intransitive verb the case is different; for the action is limited to the agent; and when it is stated that a thing is done, there is no agent by which it is done. *I perish*, is intransitive; *I am perished*, is the passive form; but the latter neither expresses nor implies an agent by which I perish.

This fault occurs frequently in the common version of the Scriptures.

"Yea, whereto might the strength of their hands profit me, in whom old age *was* [had] *perished*." Job xxx. 2.

"Their memorial *is* [has] *perished* with them." Ps. ix. 6.

"The heathen *are* [have] *perished* out of this land." Ps. x. 16.

"Israel *is* [has] *fled* before the Philistines." 1 Sam. iv. 17.

"David *is* [has] *fled*." 2 Sam. xix. 9.

"The days *were* [had] *not expired*." 1 Sam. xviii. 26.

"And when the year *was* [had] *expired*." 2 Chron. xxxvi. 10.

"I only *am* [have] *escaped* alone to tell thee." Job i. 15.

"And it came to pass, when he *was* [had] *returned*." Luke xix. 15.

*Return* is sometimes a transitive verb, and sometimes intransitive. When a sum of borrowed money *is returned*, the phrase is correct, for this is the passive form of a transitive verb. But when a man *is returned*, we may ask, who has returned him? In this case, the man returns by his own act, and he cannot be said to be returned.

"He found the Empress *was* [had] *departed*." *Core*.

"They *were* [had] *arrived* within three days' journey of the spice country." *Gibbon*, Ch. i. Note.

"Neither Charles nor Diocletian *were* [had] *arrived* at a very advanced period of life." *Ib.* Ch. xiii.

"The posterity of so many gods and heroes *was* [had] *fallen* into the most abject state." *Ib.* Ch. ii.

"Silver *was* [had] *grown* more common." *Ib.*

"He *was* [had] *risen* from the dead, and *was* [had] *just ascended* to heaven." *Milner*, i. 20.

"Hearing that they *were* [had] *arrived*." *Ib.* 211.

"Claudius—vexed because his wife *was* [had] *become* a Christian." *Ib.* 274.

"Does not the reader see how much we *are* [have] already departed from Christian simplicity?" *Ib.* 299.

"My age *is* [has] *departed*." *Isaiah* xxxviii. 12.

"The man out of whom the demons *were* [had] *departed*." *Luke* viii. 35.

"Workmen *were* [had] *arrived* to assist them." *Mitford*.

"A body of Athenian horse *was* [had] *just arrived*." *Ib.*

This fault is common in *Mitford's History of Greece*. In the writings of *Roscoe*, which are more elegant, it occurs, but less frequently.

"The time limited for the reception of the cardinal *was expired*." *Roscoe*, lco. X.

"He inquired whether the report was true, that a legate *was arrived*." *Ib.* L. Med.

"The nation *being* [having] once more got into a course of borrowing." *Price on Liberty*.

"When he *was* [had] *retired* to his tent." *Core's Russ*.

"He *was* [had] *not yet arrived*." *Ib.*

The intransitive verb *grow* is constantly used as a transitive verb, as, to grow wheat.

It seems almost incredible that such errors should continue,

\* On this use of intransitive verbs, as the ship *was departed*, it may be asked, who departed it? The mail *is arrived*, who has arrived it? The tree *is perished*, who has perished it? The enemy *was fled*, who fled them? The time *was expired*, who expired it?

to this time, to disfigure the language of the most distinguished writers, and that they should escape animadversion. The practice has evidently been borrowed from the French or Italian; but surely no lover of correctness can excuse such violation of the best established principles in our language.

There is a grammatical error running through the writings of so respectable a writer as *Mitford*, which ought not to be passed unnoticed; as it seems to be borrowed from the French language, whose idioms are different from the English, but which the English are too apt to follow. This fault is, in using the preterite or perfect tense, instead of the past tense indefinite, usually called, most improperly, the *imperfect*. Take the following sentences for examples. "The conduct of Pelopidas toward Arendin and its minister at the Persian court—*has scarcely been* the result of more caprice or resentment." The verb here ought to be *was*.

"The oration [of Isocrates] *has been* [was] a favourite of Dionysius of Halicarnassus."

This form of expressing the time would be good in French, but is very bad in English. And it may be here remarked, that the tense *he was, he arrived, he wrote*, is not properly named *imperfect*. These verbs, and all verbs of this form, denote actions finished or perfect, as "In six days God *created* the heaven and the earth." Imperfect or unfinished action is expressed in English in this manner, he *was reading*, they *were writing*. The error of calling the former tense *imperfect*, has probably proceeded from a servile adoption of the Latin names of the tenses, without considering the difference of application.

There are some errors in all the English Grammars, that have been derived to us from antiquity. Such is the arrangement of *that* among the conjunctions, like the Greek *οτι*, and the Latin *ut*. *Και μοχαρια η πιστις σου, οτι σετα τι δυναεις τοις λαλουμενις αυτη πειρα Κυριου*. And blessed is she who believed *that* there shall be a performance of the things which were told her from the Lord; *Luke* i. 45. In our version, *οτι* is rendered *for*, but most erroneously. The true meaning and character of *οτι* will best appear, by a transposition of the clauses of the verse: "There shall be a performance of the things told her from the Lord; blessed or happy is she who believed *that*." Here *οτι*, *that*, appears to be what it really is, a relative or substitute for the whole clause in Greek succeeding it. So in *Luke* xxii. 18. *Διγω γαρ υμιν οτι ου μη πινω, &c.* I say to you *that* I will not drink. I will not drink, I say to you *that*. It is the same in Latin, "Dico enim vobis quod non bibam." *Quod* is here a relative governed by *dico*, and referring to the following clause of the sentence.

So also *Matthew* ix. 28. *Πιστευετε οτι δυναμις τουτο ποιησαι*; Do ye believe *that* I am able to do this? I am able to do this, do ye believe *that*?

This error runs through all Grammars, Greek, Latin, French, English, &c. But how such an obvious fact, that the word *that* and its corresponding words in other languages, refer to the clause of a sentence, should escape observation, age after age, it is not easy to explain. How could it be supposed that a word is a conjunction which does not join words or sentences? *That* is used, in the passages cited, not to unite two sentences, but to continue the same sentence by an additional clause.

The relative, when referring to a sentence or the clause of a sentence, is not varied, for a variation of case is not wanted.

So *notwithstanding* and *provided* in English, and *pourtui que* in French, are called conjunctions, but most improperly; as they are participles, and when called conjunctions, they always form, with a word, clause or sentence, the case absolute or independent. Thus, "It rains, but notwithstanding *that*, [it rains,] I must go to town." That fact (it rains) not opposing or preventing me, that is, in opposition to that, I must go to town; *hoc non obstante*.

"I will ride, *provided* you will accompany me." That is, I will ride, the fact, *you will accompany me*, being provided.

Such is the structure of these sentences. It is the same in French, *pourtui que*, that being provided, *que* referring to the following clause.

There are other points in grammar equally faulty. Not only in English grammar, but in the grammars of other languages, men stumble at the threshold, and teach their children

## INTRODUCTION.

to stumble. In no language whatever can there be a part of speech properly called an *article*. There is no word or class of words that falls within the signification of *article*, a joint, or that can otherwise than arbitrarily be brought under that denomination. The definitive words called *articles*, are all *adjectives* or *pronouns*. When they are used with nouns, they are *adjectives*, modifying the signification of the nouns, like other adjectives; for this is their proper office. When they stand alone, they are *pronouns*, or *substitutes* for nouns. Thus *hic*, *ille*, *ipse*, in Latin, when used with nouns expressed, are adjectives; *hic homo*, this man; *ille homo*, that man. When they stand alone, *hic*, *ille*, they stand in the place of nouns. The fact is the same in other languages.

The English *the* is an adjective, which, for distinction, we call a *definitive adjective*, and for brevity, a *definitive*, as it defines the person or thing to which it refers, or rather designates a particular person or thing. But why this should be selected as the only definitive in our language, is very strange; when obviously *this* and *that* are more exactly definitive, designating more precisely a particular person or thing than *the*. These words answer to the Latin *hic* and *ille*, which were always used by the Romans, when they had occasion to specify definite persons or things.

As to the English *an* or *a*, which is called in grammars the *indefinite article*, there are two great mistakes. *A* being considered as the original word, it is said to become *an* before a vowel. The fact is directly the reverse. *An* is the original word, and this is contracted to *a* by dropping the *n* before a consonant.

But *an* is merely the Saxon orthography of *one*, *un*, *unas*, an adjective found in nearly all the languages of Europe, and expressing a single person or thing. It is merely a word of number, and no more an *article* than *two*, *three*, *four*, and every other number in the language. Take the following examples.

Bring me *an* orange from the basket; that is, any *one* of the number.

Bring me *two* oranges from the basket; that is, any *two* of the number.

Bring me *three* oranges from the basket; that is, any *three* of the number; and so on to any number *ad infinitum*.

When thus used, *an*, *two*, *three*, are all indefinite; that is, they are used with nouns which are indefinite, or expressing things not particularly designated. But this is not owing to the essential character of the adjectives, *an*, *one*, *two*, *three*; for any of them may be used with definite nouns; and *an* is continually thus used.

"I will be *an* adversary to thine adversaries."

"The angel stood for *an* adversary against Balaam."

"Make this fellow return, lest in the battle he be *an* adversary to us."

"Rezon ... was *an* adversary to Israel all the days of Solomon."

"And he spake *a* parable to them to this end."

"And there was *a* widow in that city."

"And seeing the multitude, he went up into *a* mountain."

"I will be *a* God to thee and thy seed after thee."

"Thou art *a* God ready to pardon."

Now let any of these phrases be tested by the common definition of *an* or *a*, "that it is used in a vague sense, to point out one single thing of the kind; in other respects indeterminate."

"I will be *an* adversary to thine adversaries;" that is, "I will be *any* adversary," one of the kind, but vague or indeterminate.

"Rezon was *an* adversary to Israel;" that is, in a vague sense *any* adversary, indeterminate.

"And he spake *a* parable to them;" that is, *any* parable, indeterminate.

"Thou art *a* God ready to pardon;" that is, *any* God, one of the kind, in a vague sense, indeterminate!

If it should be said, the noun is rendered determinate, by other words in the sentence, and not by *an* or *a*, this may be and generally is true; but this shows that *an* does not give to the noun its character of definiteness or indefiniteness; it always retains its proper signification, which is *one*, and nothing

more; and it is used indifferently before nouns definite or indefinite.

This mistake of the character of *an* is found in other languages.

## ORTHOGRAPHY.

From the period of the first Saxon writings, our language has been suffering changes in orthography. The first writers, having no guide but the ear, followed each his own judgment or fancy; and hence a great portion of Saxon words are written with different letters, by different authors; most of them are written two or three different ways, and some of them fifteen or twenty. To this day the orthography of some classes of words is not entirely settled; and in others it is settled in a manner to confound the learner, and mislead him into a false pronunciation. Nothing can be more disreputable to the literary character of a nation, than the history of English orthography, unless it is that of orthoepey.

1. The Saxon diphthong *æ*, which probably had a specific and uniform sound or combination of sounds, has been discarded and *ea* generally substituted in its place, as *bræth*, *breath*. Now *ea* thus united have not a uniform sound, and of course they are no certain guide to pronunciation. In some instances, where the Saxon spelling was not uniform, the modern orthography follows the most anomalous and difficult, instead of that which is regular. Thus the Saxons wrote *fether* and *fether*, more generally the latter, and the moderns write *feather*.

2. The letter *g* in Saxon words, has, in many English words, been sunk in pronunciation, and either wholly lost, or it is now represented by *y* or *w*. Thus *dryg*, or *dag*, has become *day*; *gear* is *year*, *bugan* is *bow*, and *fæger* is *fair*.

3. The Saxons, who adopted the Roman alphabet, with a few alterations, used *c* with its close sound like that of *k*. Thus *lic*, like; *locian*, to look. But after the Norman conquest, *c* before *e*, *i*, and *y*, took the sound of *s*; hence arose the necessity of changing this letter in words and syllables, where it was necessary to retain the sound of *k* before these vowels. Thus the Saxon *liccan*, pronounced originally *likean*, becomes, with our present sound of *c* before *e*, *lesan*; and *locian* becomes *losian*. To remedy this evil, our ancestors introduced *k* from the Greek, writing it generally after *c*, as in *lick*, *stick*, though in some instances, omitting *c*, as in *like* and *look*. Hence in all monosyllables in which a syllable beginning with *c* or *i* is added to the word, as in the past time and participles of verbs, we use *k* in the place of the Saxon *c*, as in *licked*, *licking*.

Our early writers attempted to extend this addition to words introduced from the Latin and Greek, in which no such reason exists for the use of *k*. Thus they wrote *publick*, *musick*, *rhetorick*. In these and similar words the Latins used *c* for the Greek *κ*, as *musicus*, for *μουσικός*, and the early English writers took both letters, the Roman *c* and Greek *κ*. This was absurd enough; but they never proceeded so far as to carry the absurdity through the derivatives; never writing *publication*, *musickal*, *rhetorickal*, *catholicism*, *skeptickism*, *stoickism*. After a long struggle with the force of authority, good sense has nearly banished this pedantic orthography from use; and all words of this kind now appear, in most of our public acts and elegant writings, in their proper simplicity; *public*, *publication*, *music*, *musical*.

4. In many words, formerly ending in *ie*, these letters have been discarded from the singular number, and *y* substituted. Thus *remedie*, *memorie*, are now written *remedy*, *memory*. But what is very singular, the plural of these words retains the *ie*, with the addition of *s*, as in *remedies*. This anomaly, however, creates no great inconvenience, except that it has been extended by negligent writers to words ending in *ey*, as in *attornies*. But words ending in *ey* properly make the plural by simply taking *s*, as in *sureeys*, *attorneys*. The same rule applies to verbs when an *s* is added, as in *conveys*.

5. In a vast number of words the vowel *e* has been discarded as useless; as in *eggs* for *eggēs*; *certain* for *certaine*; *empress*, for *empressē*; *goodness* for *goodnesse*. This is an improvement, as the *e* has no sound in modern pronunciation. But here again we meet with a surprising inconsistency; for the same reason which justifies this omission, would justify and

## INTRODUCTION.

require the omission of *e* final in *motive*, *pensive*, *juvenile*, *genuine*, *sanguine*, *doctrine*, *examine*, *determine*, and a multitude of others. The introduction of *e*, in most words of these classes, was at first wrong, as it could not plead any authority in the originals; but the retaining of it is unjustifiable, as the letter is not merely useless, but, in very numerous classes of words, it leads to a false pronunciation. Many of the most respectable English authors, a century ago or more, omitted *e* in such words as *examin*, *determin*, *famin*, *ductil*, *fertil*, *defuit*, &c., but these improvements were afterwards rejected, to the great injury of orthography. In like manner, a final *e* is inserted in words of modern coinage, as in *alumine*, *chlorine*, *chloride*, *oxide*, &c., without the least necessity or propriety.

6. A similar fate has attended the attempt to anglicize the orthography of another class of words, which we have received from the French. At a very early period, the words *chambre*, *drastre*, *desordre*, *charire*, *monstre*, *tendre*, *tigre*, *entre*, *fièvre*, *diametre*, *arbitre*, *nombre*, and others, were reduced to the English form of spelling; *chamber*, *disaster*, *disorder*, *charter*, *monster*, *tender*, *tiger*, *enter*, *fever*, *diameter*, *arbitr*, *number*. At a later period, Sir Isaac Newton, Camden, Selden, Milton, Whitaker, Pridcaux, Hook, Whiston, Bryant, and other authors of the first character, attempted to carry through this reformation, writing *accepter*, *center*, *sepulcher*. But this improvement was arrested, and a few words of this class retain their French orthography; such are *metre*, *mitre*, *nitre*, *spectre*, *scriptre*, *theatre*, *sepulchre*, and *centre*. It is remarkable that a nation distinguished for erudition, should thus reject improvements, and retain anomalies, in opposition to all the convenience of uniformity. In the present instance, want of uniformity is not the only evil. The present orthography has introduced an awkward mode of writing the derivatives, for example, *centred*, *scripted*, *sepulchred*; whereas Milton and Pope wrote these words as regular derivations of *center*, *scripter*, *sepulcher*: thus, "scriptured king." So Cox, in his *Travels*, "The principal wealth of the church is *centered* in the monasteries." This is correct.

7. Soon after the revival of letters in Europe, English writers began to borrow words from the French and Italian; and usually with some little alteration of the orthography. Thus they wrote *author*, *embassadour*, *predecessour*, *successour*; using *our* for the Latin termination *or*, and the French *eur*, and writing similar words in like manner, though not of Latin or French original. What motive could induce them to write these words, and *errorr*, *honour*, *favour*, *inferiour*, &c., in this manner, following neither the Latin nor the French, I cannot conceive. But this orthography continued down to the seventeenth century, when the *r* began to be rejected from certain words of this class, and at the beginning of the last century, many of these words were written, *ancestor*, *author*, *error*, &c., as they are now written. But *favor*, *honor*, *labor*, *candor*, *ardor*, *terror*, *vigor*, *inferior*, *superior*, and a few others, were written with *u*, and Johnson introduced this orthography into his Dictionary. Nothing in language is more mischievous than the mistakes of a great man. It is not easy to understand why a man, whose professed object was to reduce the language to some regularity, should write *author* without *u*, and *errorr* and *honour* with it! That he should write *labour* with *u*, and *laborious* without it! *Vigour* with *u*, and *vigorous*, *invigorate*, without it! *Inferiour*, *superiour*, with *u*, but *inferiority* and *superiority*, without it! Strange as it is, this inconsistency runs through his work, and his authority has been the means of continuing it, among his admirers, to this day.

8. There is another class of words, the orthography of which is not uniform nor fully settled, such as take the termination *able* to form an adjective. Thus Johnson writes *proveable* with *e*, but *approvable* and *reprovable*, without it. So *moveable*, but *immoveable* and *removeable*; *tameable*, but *blamable*, *censurable*, *desirable*, *excusable*; *saleable*, but *ratable*.

With like inconsistency Walker and Chalmers write *daut* with *u*, and *bedaut* with *o*, deviating in this instance from Johnson. Chalmers writes *abridgement* and *judgement* with *e*, but *acknowledgment* without it. Walker writes these words without *e*, but adds it to *lodgement*.

9. Johnson writes *octoedrical*; Chalmers *octoedra*; Sheridan, Walker, and Jones follow Johnson; but Jones has *octahedron*, which is not in the other Dictionaries. The Greek, in words of this kind, is inconsistent, for *okta* is changed, in compound words, to *okta*.

10. Johnson introduced *instructor*, in the place of *instructor*, in opposition to every authority which he has himself adduced to exemplify his definitions; Denham, Milton, Roscommon, Locke, Addison, Rogers, and the common version of the Scriptures. But what is more singular, this orthography, *instructor*, is contrary to his own practice; at least, in four editions of his *Rambler* which we have examined, the word is uniformly written *instructor*. The fact is the same with *visitor*.

11. Most of these and some other inconsistencies have been of long continuance. But there are others of more recent date, which admit of no apology, as they are changes from right to wrong. Such is the change of the correct orthography of *defense*, *expense*, *offense*, *pretense*, and *recompense*, by substituting *e* for *s* as in *defence*. This change was probably made or encouraged by printers, for the sake of avoiding the use of the old long *s*; but since this has been discarded, that reason no longer exists. The orthography, *defence*, &c., is justified, not only by the Latin originals, but by the rule of uniformity; for the derivatives are always written with *s*, *defensive*, *extensive*, *offensive*, *pretension*, *recompensating*.

12. No less improper was the change of *scriptie* into *skeptic*. In favour of this innovation, it is alleged that the word is from the Greek *σκηπτικός*. True; but is not *scene* derived from the Greek *σκηνη*, and *acceptre* from *σκηπτειν*, and *ascetic* from *ασκητικος*, and *ocean* from *ωκεανος*? Are not all these words in exact analogy with each other, in their original orthography? Were they not formerly analogous in the English orthography? Why violate this analogy? Why introduce an anomaly? Such innovations, by dividing opinions and introducing discrepancies in practice, in classes of words of like formation, have a mischievous effect, by keeping the language in perpetual fluctuation.

13. In like manner, *dispatch*, which had, from time immemorial, been written with *i*, was changed into *despatch*, on the wonderful discovery that the word is derived from the French *depecher*. But why change one vowel and not the other? If we must follow the French, why not write *despech*, or *depech*? And why was this innovation limited to a single word? Why not carry the change through this whole class of words, and give us the benefit of uniformity? Is not *disaster* from the French *desastre*? Is not *discharge* from *decharger*? Is not *disarm* from *desarmer*? Is not *disobey* from *desobeir*? Is not *disoblige* from *desobliger*? Is not *disorder* from *desordre*? The prefix *dis* is more properly English than *de*, though both are used with propriety. But *dispatch* was the established orthography; why then disturb the practice? Why select a single word from the whole class, and introduce a change which creates uncertainty where none had existed for ages, without the smallest benefit to indemnify us for the perplexity and discordance occasioned by the innovation? Now let it be observed that Johnson himself wrote *dispatch*; for this orthography occurs twice under *SEND* in his Dictionary, and five times under *SPEED*.

14. The omission of one *l* in *befall*, *install*, *installment*, *recall*, *entrall*, &c., is by no means to be vindicated; as by custom, the two letters *ll*, serve as a guide to the true pronunciation, that of broad *a* or *aw*.

15. It is an established rule, in the English language, that monosyllabic verbs ending in a single consonant, not preceded by a long vowel, and other verbs ending in a single accented consonant, and of course not preceded by a long vowel, double the final consonant, in all the derivatives, which are formed by a termination beginning with a vowel. Thus, *fit*, *blot*, *bar*, when they take the terminations *ed*, *eth*, *ing*, are written *fitted*, *blotted*, *blotted*, *blotted*, *blotted*; *barred*, *barrith*, *barring*. *Abet*, *compel*, form the like derivatives; *abetted*, *abetted*, *abetting*; *compelled*, *compelled*, *compelling*. The reason of this rule is, that without this duplication of the last consonant, the vowel of the primitive word would, in the derivative, be naturally pronounced wrong, that is, with its long sound; *filing*, *blotting*, *barred*, *compelled*. Hence we see

## INTRODUCTION.

the reason why verbs, having the long sound of a vowel, do not double the last consonant, as *feared*, *revealed*, *repeated*.

The converse of this rule is, that verbs ending in a single consonant, but having the accent on the first syllable, or on a syllable preceding the last, ought not to double the final consonant in the derivatives. Thus, *limit*, *labour*, *charter*, *clatter*, *pardon*, *deliver*, *hinder*, have for their derivatives, *limited*, *laboureth*, *chartered*, *pardoning*, *delivering*, *hinderest*. But, strange as it may seem, the rule is wholly neglected and violated in numerous words of this class. Thus we observe, in all authors, *ballotting*, *bevetting*, *levelled*, *travelled*, *cancelled*, *revelling*, *rivalling*, *worshipped*, *worshipper*, *apparelled*, *embowelled*, *libelling*, and many others, in which the last consonant is doubled, in opposition to one of the oldest and best established rules in the language. Perry, in his Dictionary, lays down the rule for guidance, but has not been careful, in all cases, to observe it.

Not less remarkable is the practice of doubling the last consonant in *equalled*, *equalling*, but not in the verb *equalize*. And to add to the inconsistency, the last consonant is doubled in *tranquillize*, a word in exact analogy with *equalize*.

A singular instance of inattention to analogy or uniformity, occurs in the formation of certain words from the Greek. Thus in *anatomy*, *bronchotomy*, *cacophony*, *euphony*, *lithotomy*, and others, the final vowel of the Greek original is represented in English by *y*, which makes a syllable. But in *epitome*, *catastrophe*, *hyperbole*, and many others, the final vowel of the Greek is represented by *e*, which, in words of English origin, rarely or never makes a syllable at the end of a word. The consequence is, that the last two syllables are liable to be pronounced in one, *tome*, *phre*, *bole*. Such a departure from analogy is very inconvenient. Besides, if the letter *y* closed the words in the singular number, the plural would be regularly formed by changing *y* into *ies*.

A like fault is observable in the spelling of certain derivatives ending in *er*. In *barometer*, *hygrometer*, *thermometer*, and all similar derivatives, the Greek *μετρον* gives *meter*, in English, while in English books the word is written *metre*, like the French word. The French are consistent, for they write the word in the same manner, both when single and in composition. Such discrepancies in the English language are little honourable to English philologists.

In the use of the prefixes *en*, *em*, *in*, *im*, there is not uniformity nor settled usage. The French changed the Latin *in* into *en* or *em*, and English authors have adopted one or the other, without regard to any settled rule. Johnson's Dictionary has done something toward reducing the number of discrepancies of this kind; but some changes have, since his time, been introduced.

In the use of the prefix *un*, many changes have taken place within the last century or two, and the use of *in* has been substituted for *un*; as *inaccessible* for *unaccessible*.

In the use of the termination *ize*, the English books are all at variance with each other, and no lexicographer is consistent with himself. Hence we every day see *authorise* and *authorize*, *apostatise* and *apostatize*, *temporise* and *temporize*.

There are many words in the language containing superfluous letters, especially in the terminating syllable. Thus, one *s* in the syllables *less* and *ness*, at the end of words, is useless; one *l* in *gill*, *rill*, *sill*, *dull*; one *f* in *cliff*, *bluff*, are superfluous.

The rule for adding two consonants of a sort should be, to add two letters to the original word, when they are both wanted in the derivatives. Thus *fil* would give the sound of *fill*; but this being a verb, the two letters are required in the past tense and participles, *filled*, *filling*. So in the adjective *stiff*, the second letter is wanted in *stiffen*, otherwise a person would be apt to pronounce the word *sti-fen*.

But in some words the terminating consonant is doubled, not only without necessity or use, but in opposition to propriety. *Plaintiff* is the French *plaignif*; *pontiff* is the French *pontife*; and no possible reason can be assigned for adding an *f* to the original word, any more than for adding the same letter to *brief* and *relief*. And what is worse, the letter is doubled in *pontiff*, the original, and then omitted in all the derivatives, *pontificate*, *pontifical*, &c.

In like manner, the vowel *e* is added to a multitude of

words, in which it is not pronounced, and is worse than useless, as it often misleads the learner in the pronunciation. If the final *e* were omitted in *juvenil*, *volatil*, the pronunciation could not be mistaken; but as the preceding vowel is sometimes long and sometimes short in the terminating syllables, *ile*, *ine*, *ile*, the final *e* serves only to perplex the learner.

In the terminating syllable *ive*, the final *e* is worse than useless, as the *i* is always short, *iv*, and the addition of *e* contravenes the general rule, that the vowel followed by a consonant and *e* final, is generally long, as in *mate*, *mole*, *mute*, *dissipate*.

Our modern writers seem to delight in this useless addition of *e* final; as they annex it to words without reason or authority. This fault occurs frequently in words borrowed from foreign languages, in which the letter is not found in the original language. One would suppose that good taste alone ought to correct this error.

It is much easier, however, to point out the anomalies, inconsistencies, and irregularities of English orthography, than to devise any effectual plan by which they may be removed; and we conceive that any attempt on the part of a lexicographer to introduce a regular and uniform system of orthography, based upon proper principles, would prove a complete failure. Horace justly remarks:—

"Multa renascuntur, quæ jam cecidere; cadentque  
Quæ nunc sunt in honore, vocabula, si volet usus,  
Quem penes arbitrium est, et jus, et norma loquendi."

And so it is in regard to orthography; the public will never take their mode of spelling from a Dictionary, but will rather expect that a Dictionary shall take its mode of spelling from them. Accordingly in this Dictionary we have adhered as far as possible to the established orthography of words, and in regard to those words of which there are different modes of spelling, we have endeavoured to select that mode which seems to be best authorized.

## PRONUNCIATION.

As our language has been derived from various sources, and little or no systematic effort has been made to reduce the orthography to any regularity, the pronunciation of the language is subject to numerous anomalies. Each of our vowels has several different sounds; and some of the consonants represent very different articulations of the organs. That part of the language which we have received from the Latin, is easily subjected to a few general rules of pronunciation. The same is the fact with most of the derivatives from the Greek. Many words of French origin retain their French orthography, which leads to a very erroneous pronunciation in English; and a large portion of our monosyllabic words of Saxon origin are extremely irregular both in orthography and pronunciation.

If we can judge, with tolerable certainty, from the versification of Chaucer, the pronunciation of words must have been, in many respects, different in his age, from that of the present day; particularly in making a distinct syllable of *e* final, and of the termination *ed*. But no effort was probably ever made to settle the pronunciation of words, till the last century. In England, which was settled by various nations, there are numerous dialects or diversities of language still retained by the great mass of the population.

Towards the close of last century, Thomas Sheridan, an Irish gentleman, who had been the pupil of an intimate friend of Dean Swift, attempted to reduce the pronunciation of English words to some system, and to introduce it into popular use. His analysis of the English vowels is very critical, and in this respect, there has been little improvement by later writers, though we think none of them are perfectly correct. But in the application of his principles, he failed of his object. Either he was not well acquainted with the best English pronunciation, or he had a disposition to introduce into use some peculiarities which the English did not relish. The principal objection made to his scheme is, that he gives to *s* the sound of *sh*, in *sudorific*, *superb*, and other words where *s* is followed by a long. These he pronounces *shoodorific*, *shooperb*, *shoopersfluity*, &c. This pronunciation of *s* corresponding to the Shemitic *sh* he probably learnt in Ireland, for in the Irish

## INTRODUCTION.

branch of the Celtic, *s* has often the sound of *sh*. Thus *sean*, old, is pronounced *shean*. This pronunciation was no sooner published, than condemned and rejected by the English.

Another most extraordinary innovation of Sheridan was, his rejection of the Italian sound of *a*, as in *father*, *calm*, *ask*, from every word in the language. Thus his notation gives to *a* in *bar*, the same sound as in *barren*, *barrel*, *bat*; to *a* in *father*, *pass*, *mass*, *pant*, the same sound as in *fat*, *passion*, *massacre*, *pan*, *fancy*. Such a gross deviation from established English usage was of course condemned and rejected.

In his pronunciation of *ti* and *ci*, before a vowel, as in *partiality*, *omniscience*, Sheridan is more correct than Walker, as he is in some other words; such, for example, as *bench*, *tench*, *book*, *took*, and others of the same classes.

Sheridan also contributed very much to propagate the change of *tu* into *chu*, or *tshu*; as in *natshur*, *cultshur*, *virtshue*. This innovation was vindicated on the supposed fact, that the letter *u* has the sound of *yu*; and *natyur*, *cultyur*, *virtue*, in a rapid enunciation, become *natshur*, &c. And to this day, this error respecting the sound of *u* is received in England as truth. But the fact is otherwise, and if not, it does not justify the practice; for in usage, *u* is short in *nature*, *culture*.

This innovation, however, has prevailed to a considerable extent, although Sheridan subjected the change of *tu* to no rules. He is consistent in applying this change equally to *tu*, whether the accent follows the *t* or not. If *tu* is to be changed to *tshu*, in *future*, and *perpetual*, it ought to undergo the same change in *futurity*, and *perpetuity*; and Sheridan, in pronouncing *tutor*, *tutelage*, *tumult*, as if written *tshooter*, *tshootelage*, *tshoomult*, is certainly consistent, though wrong in fact. In other words, however, Sheridan is inconsistent with himself; for he pronounces *multitshood*, *rectitshood*, *servitshood*, while *habitude*, *beatitude*, *certitude*, *decrepitude*, *gratitude*, &c., retain the proper sound of *t*.

Walker's rule for changing *tu* to *chu*, only when the accent precedes, is entirely arbitrary, and evidently made by him to suit his own practice. It has, however, the good effect of reducing the *chus*, and removing the outrageous anomalies of *tshooter*, *tshoomult*, &c.

There are many other words which Sheridan has marked for a pronunciation, which is not according to good usage, and which the later orthoepists have corrected. In general, however, it may be asserted that his notation does not warrant a tenth part as many deviations from the present respectable usage in England, as Walker's.

In a few years after the publication of Sheridan's Dictionary, appeared Walker's, the author of which introduces the work to the public with the following remarks on the labours of his predecessors.

"Among those writers who deserve the first praise on this subject, is Mr. Elphinstone, who, in his Principles of the English Language, has reduced the chaos to a system, and laid the foundation of a just and regular pronunciation. But this gentleman, by treating his subject with an affected obscurity, and by absurdly endeavouring to alter the whole orthography of the language, has unfortunately lost his credit with the public, for the part of his labours which entitles him to the highest praise."

"After him, Dr. Kenrick contributed a portion of improvement, by his Rhetorical Dictionary; but he has rendered his Dictionary extremely imperfect, by entirely omitting a great number of words of doubtful and difficult pronunciation; those very words for which a Dictionary of this kind would naturally be consulted." [Let it be noted, that the same objection lies in full force against Sheridan, Walker, and Jones.]

"To him succeeded Mr. Sheridan, who not only divided the words into syllables, and placed figures over the vowels, as Dr. Kenrick had done, but by spelling these syllables as they are pronounced, seemed to complete the idea of a Pronouncing Dictionary, and to leave but little expectation of improvement. It must be confessed that his Dictionary is generally superior to every thing that preceded it, and his method of conveying the sound of words by spelling them as they are pronounced, is highly rational and useful. But here sincerity obliges me to stop. The numerous instances I have given of impropriety, inconsistency, and want of acquaintance with the analogies of

the language, sufficiently show how imperfect I think his Dictionary is, upon the whole, and what ample room was left for attempting another, that might better answer the purpose of a guide to pronunciation."

"The last writer on this subject is Mr. Nares, who, in his Elements of Orthoepy, has shown a clearness of method, and an extent of observation, which deserve the highest encomiums. But he seems, on many occasions, to have mistaken the best usage, and to have paid too little attention to the first principles of pronunciation."

Soon after the publication of Walker's Dictionary, appeared the Dictionary of Stephen Jones, who undertakes to correct the errors of Sheridan and Walker. This author objects to Sheridan, that he has not introduced the Italian sound of *a* [as in *father*,] in a single instance, and that Walker has been too sparing in the use of it. He objects that Sheridan has not, by any peculiar marks, pointed out the sound of *oi* or *oy* as in *noise* and *cloy*; and that Walker has given distinct marks of pronunciation to the diphthong *ou*, which are terrible to the learner, and not well calculated to express the exact sound. He considers it as no trivial error in Walker's system, that he uses the long *e* in place of the short *y*, which gives to *asperity*, for example, the ludicrous sound of *asperetee*. He notices also as a fault in Walker's scheme, that he makes no difference in the sound of *oo* in *tool*, *tooth*, and in *look*, *took*.

In all these particulars, except that of *oi* and *oy*, we think every man who understands genuine English will accord with Jones.

A few years after the appearance of Jones's Dictionary, William Perry published a Pronouncing Dictionary, in which an attempt is made to indicate the sounds of the letters by certain arbitrary marks. In this work, the author has rejected most of the peculiarities of Sheridan, Walker, and Jones, and given the language nearly as it was spoken, before these authors undertook to regulate the pronunciation. This author's manner of designating the sounds of the letters is too complex for convenience, but his pronunciation is nearer to the actual usage in England than that of either of his predecessors before mentioned. His orthography also is more correct, according to present usage, than that of his predecessors.

During the year 1828, appeared the Dictionary of R. S. Jameson, of Lincoln's Inn, intended to combine the merits of the most popular Dictionaries, and to correct the false pronunciation of Walker, whose notation, in some classes of words, he entirely rejects. He condemns, as a slovenly enunciation, the sound given to *d*, which, before *i* and *u*, Walker directs, in certain words, to be pronounced like *j*. He rejects also his notation of *ch*, or *tsh*, in *congratulation*, *statulent*, *natural*, and all similar words. He rejects also the affected pronunciation of Sheridan and Walker, in such words as *guide* and *kind*. Most of the other errors of Walker he copies, as he does his antiquated orthography.

The English orthoepists have analyzed, and in general have well defined or described, the sounds and appropriate uses of the letters of the alphabet. Sheridan's analysis, which appeared a few years before Walker's, is, for the most part, correct; but in describing the sounds of what may be called the diphthongal vowel *i*, we think he has erred, in making it to consist of the broad *a* or *aw* and *e*. He admits, indeed, that the voice does not rest on the sound *aw*, but he contends that the mouth is opened to the same degree of aperture, and is in the same position, as if it were going to sound *aw*; but before the voice can get a passage to the lips, the under jaw is drawn up to the position for sounding *e*. On this it is justly remarked by Walker, that *aw* and *e* are precisely the component elements of the diphthong *oi* and *oy*. If the *aw* is pronounced, we would add, then *i* and *oy* must be pronounced exactly alike; and if *aw* is not pronounced, then it is not a component part of the diphthongal vowel *i*.

Walker contends that this diphthong *i*, is composed of the sound of the Italian *a*, as in *father*, and the sound of *e*. If so, he must have given to *a* a very different sound from that which we are accustomed to give it. But this is a mistake; that sound of *a* is no more heard in *i*, than the sound of *aw*. The sound of *i* in *fight*, *mind*, *time*, *idle*, is not *fweght*, *mwemnd*, *twem*, *dwedle*; nor is it *fweght*, *mwemnd*, *twem*, *dwedle*. Let any man utter the *aw* or the Italian *a* before the *e*, and he

## INTRODUCTION.

will instantly perceive the error, and reject both definitions, as leading to a false pronunciation. The truth is, the mouth, in uttering *i*, is not opened so wide as in uttering *ao* or *â*; the initial sound is *not* that of *ao* or *â*; nor is it possible, by any characters we possess, to express the true sound on paper. The initial sound is not formed so deep in the throat as *ao* or *â*; the position of the organs is nearly, yet not exactly the same. The true sound can be learned only by the ear.

Equally inaccurate is the definition of the diphthongal *u*, or long *u*; which these writers alledge to consist of the sounds of *e* and *oo* or *yu*. It has this sound, indeed, in certain words, as in *unite*, *union*, and others; but this is a departure from the proper sound of this character, as heard in *cube*, *abuse*, *durable*, *human*, *jury*. These words are not pronounced *keoob*, *abeoos*, *deoorable*, *heooman*, *jeoorry*. The effort to introduce this affected pronunciation is of most mischievous tendency. The sound of *e* is not heard in the proper enunciation of the English *u*, and for that reason it should not be so stated on paper, nor named *yu*; as the error naturally leads to a corrupt pronunciation. Dr. Kenrick remarks, that we might as well prefix *y* to the other vowels, as to *u*, and pronounce them *yu*, *ye*, *yi*, *yo*.

But this is not the whole evil; this analysis of *u* has led orthoepists to give to our first or long *u*, two distinct sounds, or rather to make a diphthong and a vowel of this single letter. Thus they make it a diphthong in almost all situations, except after *r*, where they make it a vowel equivalent to *oo* or the French *ou*. They represent *u* as being equivalent to *eu*, that is, *e* and *oo*, in *cube*, *tube*, *duty*, *confusion*, *endure*, pronounced *keube*, *teube*, *devely*, *confusioon*, *enduree*; but in *brute*, *fruit*, *rude*, *intrude*, *ruby*, they make *u* equivalent to *oo*; thus, *broote*, *froot*, *roude*, *introduce*, *rouby*.

We know not where this affectation originated; it first appeared in Sheridan's Dictionary, but it is a most unfounded distinction, and a most mischievous error. No such distinction was known to Dr. Johnson; he gives the long *u* but one sound, as in *confusion*; and no such distinction is observed among good speakers generally.

The source of the error in this, as in another case to be mentioned hereafter, may be an inattention to the manner in which the articulations affect the vowels which follow them. To understand this, it will be necessary or useful to examine the anatomical formation of articulate sounds.

"An articulate sound," says Lowth, "is the sound of the human voice, formed by the organs of speech. A vowel is a simple articulate sound."

These definitions seem not to be sufficiently accurate. Articulation, in human speech, is the joining, juncture, or closing of the organs, which precedes and follows the vowels or open sounds, and which partially or totally intercepts the voice. A vowel or vocal sound is formed simply by opening the mouth. Thus in sounding *a* or *o*, the mouth is opened in a particular manner, but without any articulation or closing of the organs. In strictness, therefore, a simple vowel is *not* an articulate sound, as Lowth supposes; and it is certain that many irrational animals, without the power of articulation, do utter vocal sounds with great distinctness.

An articulate sound, then, is, properly, a sound preceded or followed, or both, by an articulation or junction of the organs. Thus *ba*, *ab*, and *bad*, are articulate sounds; the vowel being begun or closed, with a junction of the lips, interrupting the voice, in *ba* and *ab*; and in *bad*, the vocal sound being preceded by one articulation and followed by another. The power of articulation constitutes the great difference between men and brutes; the latter being unable to articulate, can utter only vocal sounds. The imperfect articulations of the parrot and some other animals, form no exception that deserves notice.

We give the name articulation to the act of joining the organs, and to the character or letter which represents the junction. In the latter sense, the word is equivalent to *consonant*; and articulation may be considered the preferable term, as it expresses the fact of closing the organs.

Human speech, then, consists of vocal sounds separated and modified by articulations of the organs. We open the mouth in a particular manner, to utter a vowel; we then close the organs, interrupt that sound, and open the organs to utter a second vowel; and continue this opening and closing, to the

end of the word. This process is carried on with surprising rapidity.

Now in passing from an articulation or close position, to an open position for uttering a vowel, it happens often that a very slight sound of *e* is uttered so as to be perceptible to the ear, either before or after the utterance of the proper vowel. This is remarkably the case with the long vowels preceding *r*, for such is the nature of that letter, that *bare*, *mire*, *more*, *parent*, *apparent*, &c., cannot well be pronounced without a slight sound of *e*, between the long vowel and the consonant. Thus the words above named are pronounced nearly *baer*, *mier*, *moer*, *paerent*, *appaerent*, and *bare*, *mire*, really form two syllables, though they are considered to be monosyllables.

A like case, though less obvious, occurs in uttering *u*, particularly after the labial and palatal articulations. In passing from the articulations, *eb*, *eg*, *em*, *ep*, or *pr*, to the sound of *u*, as in *mute* and *pure*, we are apt, insensibly, to utter a slight sound of *e*; and this utterance, which proceeds from the particular situation of the organs, has been mistaken for the first component sound of the diphthongal *u*. The same cause has given rise to the pronunciation of *e* before the vowel in such words as *guide*, *guard*, *kind*, *guise*.

The genuine sound of *u* long, detached from the influence of consonants, is the same in all the words above specified; and the reason why it has been made a distinct vowel after *r*, as in *rude* [rood,] is, that the organs are open before the sound commences, whereas, when it follows most of our consonants, the sound is commenced immediately after an articulation, or close position of the organs, as in *mutable* and *infusion*. For this reason, *u* has more distinctly its diphthongal sound after labials and palatals, than after *r*; but this accidental circumstance should not be the ground of radical distinctions, equivalent to the sounds of different letters.

There is, in Walker's analysis of the alphabet, an error peculiar to himself. This is, in making a distinction between the short *i* when it is followed by a consonant, and when it is not; as in *ability*. In this case, he calls the first *i*, in *abil*, short; but the second he calls open, and equivalent to *e* in *equal*. (See Principles 107, 511.) He also makes the unaccented *y* at the end of a syllable, precisely like the first sound of *e* in *me*, *meter*. *Ability*, then, written according to his principles, would be *abuletee*. Never was a grosser mistake. The sound of *i* and *y* in unaccented syllables, whether followed by an articulation or not, is always the short sound of *e* long, that is, *e* shortened; the same sound in quality or kind, but not in quantity. To prove this fact, nothing is necessary but an attention to the manner in which the words *little* and *ting* are pronounced, when they are made emphatical by utterance. They are, then, pronounced *leetle*, *teeny*—and this we hear every day, not only among children, but often among adults. In this change of pronunciation, there is nothing more than a prolongation of the sound of *i*, which, in the syllables, *lit*, *tin*, is short, in *leetle*, *teeny*, is long.

In consequence of this mistake, Walker has uniformly made a different notation of *i* when accented, and followed by a consonant in the same syllable, and when it stands alone in the syllable and unaccented. Thus to the first *i* in *ability* he assigns a different sound from that of the second; and in *article*, he gives to *i* the sound of *e* long, *arteecle*; but in *articular*, *articulate*, he gives it the short sound, *tik*. It is in consequence of this mistake, that he has throughout his Dictionary assigned to *i* and *y* unaccented, and to *y* unaccented terminating words, the sound of *e* long; an error, which, it is ascertained by actual enumeration, extends to more than *eleven thousand vowels* or syllables; an error, which, if carried to the full extent of his principles, would subvert all the rules of English versification. Jones and Perry have corrected this error in their notations, throughout the language.

If it should be said that Walker did not intend to direct *y* in this case, to be pronounced as *e* long, but that his notation is intended only to mark the *quality* of the sound; it may be replied, he either intended the sound to be that of *e* long, according to his express direction, or he did not. If he did, his notation is not according to any good practice, and by changing a short vowel into a long one, his notation would subvert the rules of metrical composition. If he did not, his notation is adapted to mislead the learner, and it does mislead

## INTRODUCTION.

learners, wherever his book is strictly followed. In truth, this notation is generally condemned, and universally rejected in practice.\*

In the notation of sounds, there is a mistake and inconsistency in all the orthoepists, which deserves notice, not on account of its practical importance so much, as to expose an error in syllabication or the division of words into syllables, which has been maintained by all writers in Great Britain, from time immemorial. The rule is, that "a single consonant between two vowels must be joined to the latter syllable." According to this rule, *habit*, *baron*, *tenet*, are to be divided thus, *ha-bit*, *ba-ron*, *te-net*.

This rule is wholly arbitrary, and has for ages retarded and rendered difficult the acquisition of the language by children. How is it possible that men of discernment should support a rule, that in thousands of words makes it necessary to break a syllable, detaching one of the letters essential to it, and giving it a place in the next? In the words above mentioned, *hab*, *bar*, *ten*, are distinct syllables, which cannot be divided without violence. In many words, as in these, this syllable is the radix of the word; the other syllable being formative or adjectitious. But where this is not the case, convenience requires that syllables should, if possible, be kept entire; and in all cases, the division of syllables should, as far as possible, be such as to lead the learner to a just pronunciation.

As in our language the long and short vowels are not distinguished by differences of character, when we see a single consonant between vowels, we cannot determine, from the preceding vowel character, whether the sound is long or short. A stranger to the language knows not whether to pronounce *habit*, *ha-bit* or *habit*, till he is instructed in the customary pronunciation. It was probably to avoid this inconvenience, that our ancestors wrote two consonants instead of one in a great number of words, as in *banner*, *dinner*. In this respect, however, there is no uniformity in English; as we have generally retained the orthography of the languages from which we have received the words, as in *tutor*, *rigor*, *silent*, and the like.

Now it should be observed that although we often see the consonant doubled, as in *banner*, yet no more than one articulation in these cases is ever used in speaking. We close the organs but once between the first and second syllable, nor is it possible to use both the letters *n*, without pronouncing *ban*, then intermitting the voice entirely, opening the organs and closing them a second time. Hence in all cases, when the same consonant is written twice between vowels, as in *banner*, *dinner*, *better*, one of them only is represented by an articulation of the organs, the other is useless, except that it prevents any mistake as to the sound of the preceding vowel.

In the notation of all the orthoepists, there is inconsistency, at least, if not error. If they intend to express the true pronunciation by using the precise letters necessary for the purpose, they all err. For instance, they write *bar'un* for *bar'on*, when one articulation only is, or possibly can be, used; so also *ballance*, *biggot*, *biggamy*, *mellon*, *mettaphor*, *mellody*. This is not only useless, for the use of the accent after the consonant, as *bar'on*, *bal'ance*, *big'ot*, *mel'on*, &c., completely answers the purpose of determining the pronunciation; but it is contradictory to their own practice in a vast number of cases. Thus they write one consonant only in *civil*, *civic*, *riuet*; and Walker writes *kollonade*, doubling *l*, but *kolony*, *kolonise*, with a single *l*. This want of system is observable in all the books which are offered to the public as standards of orthoepy.

A still greater fault, because it may lead to innumerable

practical errors, consists in the notation of unaccented syllables. In this particular, there is error and discrepancy in the schemes of the orthoepists, which shows the utter impossibility of carrying them into effect. The final *y* unaccented, Walker makes to be *e* long, as we have before observed; while Sheridan, Jones, and Perry, make it equivalent to short *i*, or at least, give it a short sound, according to universal practice. Walker pronounces the last vowel in *natural* and *national*, as *a* short; Sheridan, as *e* short, *naturul*; Jones, as *u* short, *naturul*. Sheridan's notation may be a mistake, for he gives to *al* in *national*, the sound of *ul*. In the adjective, *deliberate*, Walker and Jones give *a* in the last syllable its proper long sound; and Sheridan, the sound of *e* short, *deliberet*. *Dignitary* is pronounced by Sheridan *dignitery*, and Walker and Jones give to *a* its short sound, as in *at*. The terminating syllable *ness* is pronounced by Walker and Jones *nes*, by Sheridan *nis*, as *blessedness*, *blessednis*. The same difference exists in their notation of *less*; Sheridan pronouncing it *lis*, as in *blamelis*, and Walker and Jones giving *e* its proper sound. These differences, and many others, run through their works, and appear in a large portion of all the words in the language.

Now it is probable that all these gentlemen pronounced these words alike, or so nearly alike that no difference would be noticed by a bystander. The mischief of these notations is, that attempts are made to express minute distinctions or shades of sounds, so to speak, which cannot be represented to the eye by characters. A great part of the notations must necessarily be inaccurate, and for this reason, the notation of the vowels in unaccented syllables should not be attempted. From a careful attention to this subject, we are persuaded that all such notations are useless, and many of them mischievous, as they lead to a wrong pronunciation. In no case can the true pronunciation of words in a language be accurately and completely expressed on paper; it can be caught only by the ear, and by practice. No attempt has ever been made to mark the pronunciation of all the vowels in any other language; and in our language it is worse than useless.

As Walker's pronunciation has been represented as the standard, we shall confine our remarks chiefly to his work, with a view to ascertain its merits, and correct any erroneous impressions which have been received from such representations.

1. The first class of words which we shall mention is that in which *a* has what is called its Italian sound, as we pronounce it in *father*, *psalm*, *calm*. From a hasty enumeration of words of this class, we find there are two or three hundred in number, in which Walker gives to *a* its short sound, as in *fat*, *bat*, *fancy*, when, in fact, the most respectable usage gives that letter its Italian sound. This error Jones and Perry have corrected.

2. The notation of the sound of *oo* by Walker, is wrong in most or all the words in which *oo* are followed by *k*, and in some others. Notwithstanding the distinction between the long and short sound of *oo* is clear, and well established in a great number of words, yet he assigns the short sound to eight words only, viz. *wool*, *would*, *good*, *hood*, *foot*, *stood*, *understood*, and *withestood*. (Prin 307.) It seems inconceivable that a man, bred or resident in London, should assign to *oo* in *book*, *cook*, *took*, and other like words, the same sound as in *cool*, *boom*, *boot*, *food*. Jones and Perry have corrected this notation, and given the pronunciation according to good usage.

3. To the letters *ch* in *bench*, *bunch*, *clinch*, *drench*, *inch*, *tench*, *wrench*, and many other words, Walker gives the French sound, that is, the sound of *sh*, instead of *ch*, as *bensh*, *insh*, &c. It would seem by this and other examples of wrong notation, that the author had been accustomed to some local peculiarities, either in London, where all kinds of dialects are heard, or in some other place. In this instance, he gives to these words a pronunciation different from that of other orthoepists.

4. It has been already remarked, that Walker's notation of the sound of *i* and *y* short, in unaccented syllables, which he directs to be pronounced like *e* long, in *me*, *mete*, is contrary to all good usage, and is rejected by every other orthoepist, except Jameson. Walker admits *i* to be short, when followed by a consonant in the same syllable. Thus the first *i* in *ability*

\* From the fact, which Walker relates of himself, (Prin. 216.) that he made a distinction between the sound of *ee* in *free* and in *meet*, until he had consulted good speakers, and particularly Mr. Garrick, who could find no difference in the sound, it might be inferred that his ear was not very accurate. But his mistake evidently arose from not attending to the effect of the articulation in the latter word, which stops the sound suddenly, but does not vary it. It is the same mistake which he made in the sound of *i* in the second syllable of *ability*, which he calls short, while the sound of the second *i* and of *y* is that of long *e*. The celebrity of Walker as a teacher of elocution, and his Key to the Pronunciation of Ancient Names, which, with a few exceptions, is a good standard work, have led many persons to put more confidence in his English Orthoepy, than a close examination of its principles will support.

## INTRODUCTION.

is short, but the second *i* and the *y* are long *e*, *abileetee*. Now observe the consequence. In the plural, *abilities*, according to his rule, must be pronounced *abileetree*; but the word is never thus pronounced; universally it is pronounced *abilitiz*; the last vowel sound is, in practice, immediately followed by a consonant, and by his own rule, must be short. Then the result is, *y* in *ability* is long *e*, but *ie* in the plural, is short *i*. And for this change of sound, no provision is made in Walker's scheme, nor in any other that we have ever seen.

5. In the analysis of the sounds of our letters, Walker alleges the diphthong *ou*, *ow*, to consist of the broad *a*, or *aw*, and the Italian sound of *u*. According to his scheme, *about*, *abound*, *round*, *now*, *vow*, are to be pronounced *abawut*, *abawund*, *rawund*, *nawun*, *vawun*. But who ever heard this pronunciation? The fact is not so; the broad sound of *a* is not the initial sound of this diphthong; it is not commenced as deep in the throat, or with the same aperture as *aw*; it is a sound that can be learned only by the ear.

6. In noting the sound of the unaccented vowels, and those which have the secondary accent, there are mistakes without number, in all the schemes which we have seen, and one continued series of differences between the orthopists. The following is a specimen.

We take no notice of the different letters by which these writers express the same sound, one using *e* where another uses *y*, but of the different sounds which they give to the vowels in the second, third, or last syllable. Now, we appeal to any person who has a tolerably correct ear, whether it is the sound of *a* that is uttered by good speakers, or any speakers, in *deliverance* and *dignitary*? Is it the sound of *a* that we hear in the last syllable of *penance*, *penetrant*, and *assemblage*? Do we hear in the last syllable of *profligate*, the short *a*, as in *fat*? So far from it, that a public speaker, who should utter the sound of *a* so that it should be distinctly recognized in any polite audience, would expose himself to ridicule. The sound of the last vowel approaches to that of *e* or *u*, and the notation of Sheridan is nearest the truth. But any notation is worse than useless; for without it, there would be no difference in customary pronunciation.

To show the utter impracticability of expressing the unaccented vowels, in all cases, with precision, let the reader observe Walker's notation of *a* in the word *moderate*, and its derivatives. In the adjective and verb, the *a* is long, as in *fat*; in *moderately* and *moderateness* it is short, as in *fat*. This is certainly incorrect notation; no good speaker ever pronounces these words *moderately*, *moderateness*. In addition to this, the *a* in the verb *moderate*, is more distinctly pronounced than it is in the adjective, in which it has rather the sound of *e*, short, *moderet*; at least the sound is more nearly that of *e* than of *a*. And this distinction of sound, between letters in the same word, when an adjective, and when a verb, occurs in a multitude of cases; a distinction for which no provision is made in any system of orthoepy that we have seen, and one which must be left to the cognizance of the ear alone.

There is another class of vowel sounds that comprises too

many inaccuracies to be overlooked. This is the class in which the first syllable has an unaccented *e*, as in *debate*. In all words of this kind, Walker directs the letter *e* to have its long sound, as in *mr*, *mete*. Then, *become*, *bedeck*, *begin*, *debate*, *debar*, *declare*, *elect*, *legitimate*, *mechanic*, *medicinal*, *memorial*, *necessity*, *peculiar*, *petition*, *rebuke*, *recant*, *relate*, *secure*, *select*, *velocity*, &c., are to be pronounced *become*, *bedeck*, *beegin*, *deebate*, *derbar*, *deecclare*, *eelect*, *leggitimate*, *meecchanic*, *meeddicinal*, *meemorial*, *neecessity*, *peecculiar*, *peeition*, *reebuke*, *reecant*, *reelate*, *seecure*, *seeelect*, *veeevelocity*, &c.

According to this notation, the first vowel *e* in *evil*, *even*, and in *event*, is to have the same sound, being all marked with the same figure. Now, let us ask, where a speaker can be found who pronounces these words in this manner? Who ever heard of such a pronunciation? This notation is erroneous and mischievous, as it is inconsistent with the regular accent, which carries the stress of voice forward to the next syllable, and must, necessarily, leave the first vowel with the feeble sound of short *i* or *y*. This short sound is that which we always hear in such words.

The like error occurs in Walker's notation of *i* in *direct*, *diminish*, and many other words. Walker himself, under *despatch*, calls the sound of *e* the short *i*; but under rule 107, says this sound of *i* cannot be properly said to be short, as it is not closed by a consonant, yet it has half its diphthongal sound, the sound of *e*!! This reason that *i* or *e* is not short, because the sound is not closed by a consonant, is entirely groundless, and contradicted by the universal pronunciation of thousands of English words. To direct such words to be pronounced *deereect*, *deeminish*, is inexcusable. This error corresponds with that specified under No. 4. *supra*.

Thus, there is neither uniformity nor consistency among the orthopists, in the notation of the unaccented vowels; and it is hardly possible there should be, for many of the sounds are so slight, in ordinary pronunciation, that it is almost impossible for the ear to recognize the distinctions, and absolutely impossible to express them on paper. In truth, as Dr. Ash remarks, in a dissertation prefixed to his Dictionary, the sounds of the five vowels, in unaccented, short, and insignificant syllables, are nearly coincident; and it must be a nice ear that can distinguish the difference of sound in the concluding syllable of *altar*, *alter*, *manor*, *marmur*, *salgr*. It is for this reason that the notation of such vowels at all savours of hypercritical fastidiousness, and by aiming at too much nicety and exactness, tends only to generate doubts and multiply differences of opinion. If the accent is laid on the proper syllable, and the vowel of that syllable correctly pronounced, the true pronunciation of the word will follow of course; at least the pronunciation is more likely to be right than wrong, and no mistake will occur, which shall be an object of notice.

Nor can we approve the practice of writing all words in different characters, to express their pronunciation, as if their proper letters were so many hieroglyphics, requiring interpretation. A great part of English words have an orthography sufficiently regular, and so well adapted to express the true pronunciation, that a few general rules only are wanted as a guide to the learner.

7. Another error of notation, in most of our English Dictionaries, is that of the vowel in the first syllable of *circle*, *circumstance*, and many other words, the first syllable of which Sheridan first, and afterwards Walker and Jones, directed to be pronounced *err*. Perry's notation makes the syllable *sar*, according to all the usage with which we are acquainted.

8. Another objection to the books offered as standards of pronunciation, particularly to the Dictionaries of Sheridan and Walker, is that the rules are inconsistent, or the execution of the work is inconsistent with the rules.

A remarkable instance of inconsistency occurs in the following words. *Armature*, *aperture*, *bravature*, *feature*, &c., Walker pronounces *armatshure*, *apertshure*, *breviatshure*, *over-shure*; but *forfeiture* is *forfecetyure*, and *judicature*, *ligature*, *literature*, *miniature*, *nunciature*, *portraiture*, *prefecture*, *quadrature*, *signature*, are pronounced as here written. Can any reason be possibly assigned for such inconsistency?

9. *Obedience* and its family of words, Walker pronounces *obeejence*, *obeejeent*, *obeejeently*; but *disobedience*, *disobedient*, as here written. *Expedit* is either as here written, or *expe-*

## INTRODUCTION.

*jrent*; but *expedience* without the alternative. Why this inconsistency?

10. *Obdurate*, *obduracy*, are marked to be pronounced *obdurate* or *objurate*, *obduracy* or *objuracy*; but *objurately*, *objurateness*, without an alternative. In these last words occurs another error, the *a* in the third syllable is made short, as if pronounced *rat*; a deviation from all good usage.

This notation of *obdurate* is inconsistent also with that of *indurate*, and with that of *obdure*; an inconsistency which appears to have no plausible pretext.

The conversion of *d* into *j* before *i* is rejected, we believe, in all words, by Jones, Perry, and Jameson, and before *u* is rejected by Perry and Jameson, and in many words by Jones. It is a departure from orthography wholly inexcusable.

11. Walker (Principles, No. 92.) lays it down as a rule, that when *a* is preceded by the gutturals hard *g* or *c*, [he should have said palatals,] it is, in polite pronunciation, softened by the intervention of a sound like *e*, so that *card*, *cart*, *guard*, *regard*, are pronounced like *keard*, *keart*, *gheard*, *reyheard*. Now it is remarkable that in the vocabulary or dictionary, the author has departed from his rule, for in not one of the foregoing words, except *guard*, nor in a multitude of other words which fall within the rule, has he directed this sound of *e* before the following vowel. Had he conformed to his own rule, he must have perverted the pronunciation of *car*, *car-buncle*, *care*, *carcass*, *cardinal*, *cargo*, *garden*, *garter*, *discard*, and a long list of other words, too long to be here enumerated. The English orthoepists now confine this prepositive sound of *e* to *guard*, *guarantee*, *guardian*, *guile*, *kuid*, and a few others. The probable origin of this fault has been already assigned, in treating of the letter *u*. It is an affected pronunciation, which Nares calls "a monster, peculiar to the stage." Indeed, this slender sound of *e* before another vowel, is wholly incompatible with that manly enunciation which is peculiarly suited to the genius of the language. Perry and Jameson have rejected it.

12. In the first edition of Walker's Dictionary, the author, under the word *tripod*, observes, that "all words of two syllables, with the accent on the first, and having one consonant between two vowels, ought to have the vowel in the first syllable long." But this was too rash, for such words as *centent*, *desert*, *preface*, *present*, *profit*, *rebel*, *tropic*, and a multitude of others, stand, in the author's book, in direct opposition to his own rule. In a subsequent edition, the author, or some other person, has qualified the rule by an exception in favour of settled usage. This exception destroys the value of the rule; and indeed there is, and there can be, no rule applicable to words of this class. The pronunciation of the first vowel can be known only by the usage.

13. *Possess* is, by orthoepists, pronounced *pozzess*; but why not, then, pronounce *assess*, *assist*, *assassin*, *concession*, *obsession*, with the sound of *z*? Can any good reason be assigned for making *possess* an exception to the pronunciation of this class of words? This utterance of sounds through the nose is always disagreeable to the ear, and should be restricted to words in which usage is established. Good taste should rather induce a limitation, than an extension of this practice. This remark applies also to some words beginning with *dis*, in which Walker goes beyond other orthoepists in giving to *s* this nasal sound.

14. Walker lays it down as a fact, that *u* has the sound of *e* and *oo* or *yu*. This is true in many words, as in *union*, *unite*, *unanimity*, &c. Hence, according to his principle, *u* in these words is to be pronounced *yunion*, *yunite*, without the letter *y* prefixed. Yet he writes these and similar words with *y*, *yunion*, which, upon his principles, would prefix *yu* to the sound of *yu*, and the pronunciation would be *yunionite*, or *cooyunite*. But his notation of this sound of *u* is not uniform; for he writes *disunion* and *disunite* without *y*, though it must be as proper in the compound as in the simple word. The same inconsistency occurs between *use*, written, *yuse*, *yuze*, and *disuse*, *disuze*.

15. There is a fault in Walker's notation of *o*, when it has the sound of *oo*, the French *ou*. In the Key, he marks *o*, when it has this sound, with the figure 2, and gives *more* as an example. Then according to his Key, *o* alone when thus marked, sounds as *oo*. But in the Vocabulary, he thus marks

both vowels in *book*, *look*, *boot*, and all similar words. Then according to his notation, each of the vowels has the sound of *oo*, and *book*, *look*, are to be pronounced *boo-ook*, *loo-ook*. He certainly did not intend this; but such is precisely his direction, or the result of his notation; and a foreigner, without counter-direction, must be led into this pronunciation.

The same fault occurs in his notation of *ee*, as in *meet* and *seek*.

16. *Volume*, Walker and Jones pronounce *volyume*; why not then change *column* into *colyum*? Will it be said that in *volume* the *u* is long? This is not the fact; at least, we never heard it thus pronounced; it is always short in common usage, and so marked by Perry.

17. *Ink*, *nucle*, *concord*, *concourse*, *concubine*, are pronounced by Walker, *ingkl*, *ungkl*, *kongkord*, *kongkorse*, *kongkubine*; and these odious vulgarisms are offered for our adoption. There can be no apology for such attempts to corrupt our language.

18. The words *bravery*, *finery*, *knavery*, *nicety*, *scenery*, *slavery*, are by Walker, and the other orthoepists, pronounced in three syllables, and *imagery* in four; the final *e* of the primitive word being detached from it, and uttered with *r*, as a distinct syllable. Why *savagery* has escaped the same fate, we do not know. It is obvious that in negligent practice, these words have often been thus pronounced. But the most correct pronunciation retains the original word entire in the derivative, the slight sound of *e* before *r*, no more constituting a syllable, than it does in *more* and *mire*. Take the following examples.

Of marble stone was cut  
An altar carv'd with cunning *imagery*. Spranger.

When in those oratories might you see  
Rich carvings, portraitures, and *imagery*. Dryden.

Your gift shall two large goblets be  
Of silver, wrought with curious *imagery*. Id.

What can thy *imagery* of sorrow mean? Prior.

Pronounced in four syllables, *imagery*, in these lines, makes a syllable too much, and injures the measure, and in the last example utterly destroys it.

19. Formerly, the words *puissance*, *puissant*, had the accent on the second syllable; although the poets seem, in some instances, to have blended the four first letters into one syllable. But the modern change of the accent to the first syllable is not in accordance with English analogies, and it impairs the measure of many lines of poetry, in which these words occur. In the adverb *puissantly*, it has a very bad effect.

The foregoing observations extend to whole classes of words, in which the genuine pronunciation has been changed, unsettled, and perverted. It would be inconsistent with the limited nature of this Introduction, to enter into an examination of every particular word of disputable pronunciation. It seems to be inexpedient and useless to bestow, as Walker has done, half a page or a page, on a single word, in attempting to settle some trifling point, or, in many cases, to settle a point that has never been disputed.

In proportion as the importance of settled usages and of preserving inviolate the proper sounds of letters, as the true and only safe landmarks of pronunciation, shall be appreciated by an enlightened people, just in that proportion will all attempts of affected speakers to innovate upon such established usages be reprobated and resisted.

The intentions of the men who have undertaken to give a standard of pronunciation, have, unquestionably, been upright and sincere; but facts have proved that instead of *good*, they have, on the whole, done *harm*; for instead of reducing the pronunciation of words to uniformity, they have, to a considerable extent, unsettled it, and multiplied differences.

Some of the differences of notation in the several books may be rather *apparent* than *real*; but with all due allowance for this imperfection of the schemes, we are persuaded that there are *ten* differences among these orthoepists, where there is *one* in the actual pronunciation of respectable people in England; and in most of them the notation, if strictly followed, will lead

## INTRODUCTION.

to *ten* differences of pronunciation, where *one* only now exists in actual practice.

This effect of multiplying doubts and diversities has resulted from very obvious causes.

1. The limited acquaintance of orthoepists with the general usage, and their taking the pronunciation of London, or some dialect or local practice in that city, for the *best usage*. The propagation of such a dialectical or peculiar practice would of course disturb the uniformity of any other practice in other parts of England.

2. The difficulty or rather impracticability of representing sounds, and nice distinctions of sound, on paper; especially in unaccented syllables.

3. The partiality of authors for the practice of particular speakers, either stage players or others, which would lead them to denominate that the *best* practice which had been adopted by their favourites.

4. A spirit of fastidious hypercriticism, which has led writers to make minute distinctions, that are liable to be disputed, and which tend only to perplex the inquirer, and generate uncertainty or diversity, where no essential difference had previously existed in practice. This spirit is continually producing new books and new schemes of orthoepy, and every additional book serves only to increase the difficulty of uniting opinions and establishing uniformity.

This view of the subject is probably the most favourable that can be presented. The real fact seems to be this; these men have taken for the standard, what they were pleased to call the *best usage*, which, in many cases, is a local usage or some favourite peculiarity of particular speakers, at least if they have had any authority at all; or they have given the pronunciation which happened to please their fancy, though not authorized by usage. In this manner they have attempted to bend the common usage to their particular fancies.

It has been in this manner, by presenting to the public *local* or *particular* practice, or mere innovation, for a standard, instead of general or national usage, that the authors above mentioned have unsettled the pronunciation of many words, and multiplied diversities of practice. These attempts to obtrude *local usage* on the public, and bend to it the general or national usage, are the boldest assumptions of authority in language that the history of literature has ever exhibited.

The English language, when pronounced according to the genuine composition of its words, is a nervous, masculine language, well adapted to popular eloquence; and it is not improbable that there may be some connection between this manly character of the language and the freedom of the British constitution. They may, perhaps, act and react upon each other mutually, as cause and effect, and each contribute to the preservation of the other. At the same time, the language is, by no means, incapable of poetical sweetness and melody. The attempts to refine upon the pronunciation, within the last half century, have, in our opinion, added nothing to its smoothness and sweetness, but have very much impaired its strength of expression as well as its regularity. The attempts to banish the Italian sound of *a*, and to introduce the sound of *e* before *i* and *u*, as in *kind*, *guard*, *duty*, &c., ought to be resisted, as injurious to the manly character of the genuine English pronunciation.

In order to produce and preserve a tolerable degree of uniformity and the genuine purity of our language, two things appear to be indispensable, viz.

1. To reject the practice of noting the sounds of the vowels in the unaccented syllables. Let any man, in genteel society or in public, pronounce the distinct sound of *a* in the last syllable of *important*, or the distinct sound of *e* in the terminations *less* and *ness*, as in *hopeless*, *happiness*, and he would pass for a most inelegant speaker. Indeed, so different is the slight sound of a great part of the unaccented vowels, in elegant pronunciation, from that which is directed in books of orthoepy, that no man can possibly acquire the nicer distinction of sounds by means of books; distinctions which no characters yet invented can express. Elegant pronunciation can be learned only by the ear. The French and Italians, whose languages are so popular in Europe, have never attempted to teach the sounds of their letters by a system of notation, embracing the finer sounds of the vowels.

xlv

2. To preserve purity and uniformity in pronunciation, it is necessary to banish from use all books which change the orthography of words, to adapt the pronunciation to the fashion of the day. The scheme now pursued is the most mischievous project for corrupting the language that human ingenuity ever devised. By removing the landmarks of language, all the fences which can secure the purity and regularity of the language from unlicensed depredations without end are demolished, the chief use and value of alphabetical writing are destroyed, and every thing is given to chance and to caprice.

## ETYMOLOGY.

Irregular as is the orthography of the English language, and unsettled or corrupt as is the pronunciation, there is nothing either in English or in any other language of which we have any knowledge, which exhibits so strikingly the low state of philology, as the etymological deductions of words, or the history of their origin, affinities, and primary signification. To enable the young inquirer to estimate the erudition, correctness, or negligence of writers on this subject, and to awaken more attention to this branch of learning, we will state briefly the results of our researches, and the opinions which we have been compelled to form on the merits of the principal treatises on this subject.

The first example of etymology which we shall mention is that of Josephus, the historian of the Jews, who informs his readers, that the first man "was called *Adam*, which, in the Hebrew tongue, signifies one that is *red*, because he was formed out of *red earth* compounded together; for of that kind is virgin and true earth." Here is a mistake proceeding from a mere resemblance of words; it being certain that *Adam* no more signifies *red earth*, than it does *red cedar*. This mistake is connected with another, that *Adam* was the proper name of the first man, an individual; whereas the word is the generic name of the human species, and like *men* in English, signifies form, shape, image, expressing distinctively the characteristic eminence or distinction of form of the human race. This fact explains the use of the plural pronoun, in the account of the creation of the species. "And God said, Let us make man in our image, after our likeness; and let *them* have dominion over the fish of the sea," &c.; Gen. i. 26. It is evident, also, that the words used in relation to the species, the *image*, the *likeness* of God, have reference, not only to their intellectual and moral faculties, but also to their external form; and so the apostle interprets the words, 1 Cor. xi. 7. Not that God has any bodily shape of which man can be the image, but that man has a superior or super-excellent form, corresponding to his intellectual powers, and distinguishing him from all other animals. Now the mistake of Josephus has infected the Christian world for eighteen hundred years, and the mistake, with erroneous inferences from it, enters into the most recently published systems of theology.

Among the most celebrated authors of antiquity, who have written on the subject of language, is Varro, who has left a treatise *De Lingua Latina*. On this author's learning, Cicero, Quintilian, and Augustine have bestowed the most unbounded praises. He is pronounced to have been *vir egregius; eruditissimus Romanorum; peritissimus lingue Latine et omnis antiquitatis, sine ulla dubitatione, doctissimus*.<sup>\*</sup> He was, doubtless, a man of uncommon erudition for the age in which he lived; and his etymological treatise may be consulted with advantage by persons who have knowledge enough of this subject to separate the *certain* or *probable* from the *improbable* and *conjectural*. But it is certain from what remains of his treatise, that his knowledge of the origin of words did not extend beyond the most obvious facts and principles. Thus he deduces *initium* from *ineo*; *exitus* from *ex eo*; *victoria* from *vinco*. All this is well; and we have reason to think him correct in deducing *vellus*, fleece, from *vellere*, to pluck, as, doubtless, fleeces were plucked from sheep before the use of shears. And we have reason to believe him when he informs

<sup>\*</sup> Of the full value of these encomiums we can hardly judge, as most of Varro's writings have perished, and some of those which survive appear in a mutilated form. But the greater his erudition, the more striking will appear his ignorance of this subject.

## INTRODUCTION.

us that *imber* was originally written *himber*; that *hircus* was written by the Sabines *fircus*, and *hadus*, *fedus*.

Very different must be our opinion of the following etymologies.

*Pater*, says Varro, is from *patefacio*; *ager cultus* is so called because in it seeds coalesce or unite with the earth; referring *ager*, perhaps, to the root of *aggrer*, or the Greek *ayyem*. *Campus*, he says, was so named because fruits were first gathered from the open field, deducing the word from *capio*. Next to this, were the hills, *colles*, so named *colendo*, from *colo*, because these were cultivated next to the open plain. That land or field which appeared to be the foundation of cattle and money, was called *fundus*, or it was so called because it pours forth [*fundat*] annual crops. He deduces *cogitare* from *cogendo*; *concilium* from *cogitatione*; *cura* from burning *cor*, the heart; *volo* from *voluntas*, and a *volatu*, a flying, because the mind flies instantly whither it will. How low must have been the state of philology, when such improbable conjectures as these could attract the encomiums before mentioned, from Cicero and Quintilian!

The reader will find many things in Isidore and Priscian worthy of his attention, though much of what their works contain is now so familiar to scholars of moderate attainments as scarcely to repay the labour of perusal. But he who learns that Isidore makes *oratio*, a compound of *oris ratio*; *nomen*, a contraction of *notamen*; and that he derives *verbum* from *verberato aere*, will hardly think it worth his labour to pursue his researches into that author's works. Nor will he be disposed to relish Priscian's deduction of *litera* from *legilitera*, because a letter affords the means of reading, or from *lituro*, to obliterate, because the ancients used to write on wax tables, and afterwards to obliterate what they had written.

Vossius wrote a folio on the etymology of Latin words; but from repeated examinations of his book, we are persuaded that most of his deductions are far-fetched, conjectural, and fanciful; many of them are certainly erroneous.

Menges and Minshew we have not consulted; chiefly because from such extracts as we have seen, from their writings, we are certain that little reliance can be placed on their opinions, except in cases too plain to be mistaken.

Junius and Skinner, the authorities for most of the etymologies of Bailey and Johnson, are sufficiently correct in referring English words to the language from which they are immediately derived, especially when the orthography is too plain to be mistaken. They inform us that *further* is from the Saxon *fæder*, that *drop* is from the Saxon *droppan*, that *pecked* is from the French *piquer*, and the like. So Johnson informs us that *accent* is from the Latin *accentus*, and *accept* from the French *accepter*, Latin *recipio*. All this is well, but it can hardly be called etymology, or the deduction of words from their originals.

Whiter, in his *ETYMOLOGICON MAGNUM*, the first volume only of which we have perused, began his work on a good plan, that of bringing together words of the same or of cognate radical letters, and in pursuance of his plan he has collected many real affinities. But he has destroyed the value of his work by mistaking the radical sense of many words, and by confounding words of different elements.

Jamieson, in his *Etymological Dictionary of the Scottish Language*, has collected the affinities of words in that language, particularly words of Gothic and Teutonic origin, with industry, and probably with judgment, and a good degree of accuracy. In some instances, we think, he has departed from correct principles of etymology, and mistaken facts, and he, as well as Whiter, falls very short of truth in a most important particular, a clear understanding of the primary sense of words. Jamieson's Dictionary, however, contains a valuable addition to our stock of etymological materials.

To Horne Tooke are we indebted for the first explanation of certain indeclinable words, called conjunctions and prepositions; and for this let him have all merited praise. But his researches were very limited, and he has fallen into most material errors, particularly in his second volume.

The HERMES of Harris, according to Dr. Lowth, "is the most beautiful and perfect example of analysis that has been exhibited since the days of Aristotle." This, in our opinion, is not the character of the work, which, for the most part,

consists of passages from the works of Aristotle, Ammonius, Apollonius, Priscian, and other grammarians. It is little more than a collection of the opinions of the ancient writers on philology, whose metaphysical subtleties rather obscure than illustrate the subject. To show how easily men may be misled by metaphysics, when applied to the plainest subject imaginable, take the following example from the HERMES.

"A respects our primary perception, and denotes individuals as unknown; the respects our secondary perception, and denotes individuals as known." [This is nearly a literal translation of a passage in Priscian, lib. 17.]

To illustrate the truth of this observation, the author gives the following example. "There goes a beggar with a long beard"—indicating that the man had not been seen before; and, therefore, *a* denotes the primary perception. A week after the man returns, and I say, "There goes the beggar with the long beard;" the article *the* here indicating the secondary perception, that is, that the man had been seen before. All this is very well. But let us try the rule by other examples, and see whether it is universal, or whether it is the peculiar and proper office of *an* or *a* to denote primary perception.

"The article *a*," says Harris, "leaves the individual unascertained." Let us examine this position.

"But Peter took him, saying, Stand up; I myself also am a man." Now, according to Harris, *a* here denotes the primary perception, and the individual is unascertained. That is, this man is one I have never seen before.

"He that cometh to God must believe that he is, and that he is a rewarder of them that diligently seek him." Whether *a*, in this sentence, denotes first perception, I cannot determine; but sure I am the individual is not left unascertained.

A. B. says to me, "I have lately dismissed an old servant, who has lived with me for thirty years." Here *an* may present a primary perception to the hearer, but not so to the speaker. To both, the individual must be well ascertained.

It appears, then, that this definition of *an* or *a* is incorrect, and the pains of these metaphysical writers who form such perfect analyses of language is little better than learned trifling. On testing the real character of *an* or *a* by usage and facts, we find it is merely the adjective *one*, in its Saxon orthography, and that its sole use is to denote *one*, whether the individual is known or unknown, definite or indefinite.

Again, Harris translates and adopts the definition which Aristotle has given of a conjunction. "An articulate sound or part of speech devoid of signification by itself, but so formed as to help signification, by making two or more significant sentences to be one significant sentence."

This is so far from being true, that some of the conjunctions are verbs, equivalent to *join*, *unite*, or *add*, in the imperative mood. In like manner, the prepositions called inseparable, and used as prefixes, are all significant *per se*, although by custom they sometimes lose their appropriate use. For example, *re*, which denotes repetition, has lost its use in *recommend*, which is equivalent to *commend*, without the sense of repetition. But still it has ordinarily an appropriate sense, which is perfectly understood, even when first prefixed to a word. Let any person prefix this word to *pronounce* for the first time, and direct a boy fourteen years old to *repronounce* his oration, and he would perfectly well understand the direction.

Bryant, the author of "An Analysis of Ancient Mythology," has given to the public a history of the Cuthites or descendants of Ham, a race of bold adventurers, who, as he supposes, made expeditions by sea and land, introducing arts, founding cities, and corrupting religion by the propagation of Sabianism. For proof of his opinions, he relies very much on etymology and the signification of names. Two or three examples of his deductions will be sufficient to show his manner of proof. *Ham* or *Cham*, signifying heat and the sun, he deduces from חם, to be hot, to heat. So far he may be correct. But he goes on to deduce from this root, also, as Castle had done before him, the Greek καυσα, heat, not considering that this is from καω, to burn, in which *m* is not radical, but probably *s* is the radical consonant, as this occurs in the derivatives. Καυσα has no connection with *Ham*. From *Cam* or *Cham* he then deduces the Latin camera, Gr. camera, an arched roof or vault, whence our chamber, though it is not easy to discover

## INTRODUCTION.

the connection between this word and heat; and from the same root he deduces *Camillus*, *Camilla*, and many other words, without any support for his opinions, but a mere similarity of orthography in the first syllable. In all this he is certainly wrong.

The Greek *Esos*, God, he supposes, most unwarrantably, to be formed from the Egyptian *Thenth* or *Thoth*, Mercury.

The sun he supposes to have been styled *El-uc*; *El* [אֱלֹהִים] and *uc* or *ock*, a title of honour among the Babylonians. This word, says Bryant, the Greeks changed into *λυσος*, [a wolf,] and hence the Latin *lur*, *lucco*. A strange conjecture this, not to call it by a harsher name. Now, if Bryant had examined the Teutonic dialects, and the Welsh, he would have seen his mistake; for the Saxon *leoht*, *liht*, Dutch and German *licht*, are from the common root of the Welsh *llug*, a shooting or gleaming, *lluciw*, to throw, *llur*, a darting or flashing, the root of *lucco*; a simple root, that can have no connection with *El-uc*.

Excepting Faber's work on the Cabiri, we have seen scarcely a book in any language, which exhibits so little etymological knowledge, with such a series of erroneous or fanciful deductions, as Bryant's Analysis. Druumond's *Origines* abounds with etymological deductions of a similar character.

Gebelin, a French writer, in his *Monde Primitif*, has bestowed much labour in developing the origin and signification of words; but a large part of his labour has produced no valuable effect. His whole system is founded on a mistake, that the noun is the root of all other words.

Of all the writers on etymology, whose works we have read or consulted, Spehman and Llyud are almost the only ones in whose deductions much confidence can be placed. We do not name Camden, Hiekes, Selden, and Gibson, as their etymological inquiries, though generally judiciously conducted, were very limited. This is true, also, in some degree, of Spehman and Llyud; but the researches of Spehman into the origin of law terms, and words of the middle ages, have generally produced very satisfactory results. From the limited nature of the designs of Spehman and Llyud, errors may have occasionally escaped them; but they are few, and very pardonable.

We know of no work in any language, in which words have been generally traced to their original signification, with even tolerable correctness. In a few instances, this signification is too obvious to be mistaken; but in most instances, the ablest etymologist is liable to be misled by first appearances, and the want of extensive investigation.

A principal source of mistakes on this subject, is a disregard of the identity of the radical consonants, and a licentious blending and confounding of words, whose elementary letters are *not* commutable. Another source of error is an unwarrantable license in prefixing or inserting letters, for the purpose of producing an identity or resemblance of orthography; a fault very justly opposed by Sir William Jones.

The learned Dr. Good, in his *Book of Nature*, Lecture IX. of the second series, suggests it to be probable that both *papa* and *father*, issued from the Hebrew source, אב, אבא. He then fearlessly ventures to affirm, that there is scarcely a language or dialect in the world, polished or barbarous, in which the same idea is not expressed by the radical of one or the other of these terms. True, the letter *a* is found in most words of this signification; although our knowledge of languages is too limited to warrant such a broad assertion. But the attempt to deduce all words signifying *father*, from the Hebrew, must certainly fail; for we know from history, that a great part of Asia and of Europe was inhabited before the existence of the Hebrew nation. Besides, a large portion of the European population have no word for *father*, which can be rationally deduced from אב. The Welsh *tad*, whence our *daddy*, the Gothic *atta*, Irish *athair*, Basque *aita*, and Japonic *atki*, cannot be formed from the Hebrew word, the letter *d* and *t* not being commutable with *b*. One would suppose that a learned physiologist could not fail to assign the true cause of the similarity of words bearing the sense of *father* and *mother*, among the nations of the earth. The truth is, the sound of *a* is very easy, and probably the easiest for children, being formed by simply opening the mouth, without any exertion of the organs to modulate the sound. So, also, the articulations *b*, *m*, and *d* or *t*, being natural and easy, will gene-

rally enter into the first words formed by children. The labials are formed by simply closing the lips, and the dentals, by placing the tongue against the root of the upper teeth; the position which it naturally occupies in a healthy child. From these circumstances, we may fairly infer, *a priori*, that such words as *ab*, *aba*, *papa*, *tad*, *mamma*, must be the first words uttered by children. Indeed, were the whole human race to lose their present names for *further*, *mother*, and *nurse*, similar names would be formed by a great portion of mankind, without any communication between different nations.

The author further observes, that the generic terms for the Deity are chiefly the three following, *Al* or *Allah*, *Theus* or *Deus*, and *God*. "Besides these, there is scarcely a term of any kind, by which the Deity is designated, in any part of the world, whether among civilized or savage men. Yet these proceed from the same common quarter of the globe." True; men, and of course words, all came from a common quarter of the globe. But it so happens, that these three terms must have originated among different families, or from different sources, for they are all formed with different radicals, and can have had no connection with a common radix. But it happens, also, that not one of these terms, as far as we can learn, exists among the Slavonic nations, who compose a large portion of all the population of Europe, and whose name of God is *Bog*, a word radically distinct from all which the author has mentioned.

The author proceeds to say, "that the more common etymon for *death*, among all nations, is *mor*, *mort* or *mut*." But if either of these terms for *death*, is a native word among the great Gothic, Teutonic, and Slavonic families, which constitute the half or two thirds of all the inhabitants of Europe, we have not been able to find it. Besides *mor* and *mut* are words radically distinct, and thus originated in different families.

"*Sir*," says the author, "is, in our language, the common title of respect; and the same term is employed in the same sense throughout every quarter of the globe. In the Sanscrit and Persian, it means the organ of the head itself." He finds the word in Arabia, Turkey, in Greek, among the Peruvians in South America, in Germany, Holland, and the contiguous countries. In some of the languages of these countries we have found no such word; but if it exists, the author's inference, that the name of the head gave rise to this term of respect, (for this is what we understand him to mean,) is totally unfounded; and equally fanciful and unfounded is his supposition, that, by the loss of *h* from *sher*, the pronoun *her*, and the German *herr*, lord, are to be deduced from *sir*. In all this it is demonstrably certain there is no truth or even semblance of reality.

*Mau*, the author deduces from the Hebrew מנא to discern or discriminate, [a sense we do not find in the Lexicons,] and hence he infers that the radical idea of *mau* is that of a *thinking* or a *reasonable being*. With this word he connects *Menn*, *Menos*, *Minos*, and *mauos*, *mens*, *mind*; a sweeping inference made at random, from a similarity of orthography, without a distant conception of the true primary meaning of either of these words. But what is worse, he appears, if we do not mistake his meaning, to connect with these words the *tau*, *tanato*, or *tangi*, of the Sandwich Isles; words which are formed with a radical initial consonant, not convertible with *m*, and most certainly unconnected with *man*. See the words *FATHER*, *MAN*, and *SIR*, in the Dictionary.

The author offers some other etymologies and affinities equally remote from truth, and even from probability.

The governing principles of etymology are, *first*, the identity of radical letters, or a coincidence of cognates, in different languages; no affinity being admissible, except among words whose primary consonants are articulations of the same organs, as *B*, *F*, *M*, *P*, *V* and *W*; or as *L*, *T*, *Th* and *S*; or as *G*, *C* close, *K* and *Q*; *R*, *L* and *D*. Some exceptions to this rule must be admitted, but not without collateral evidence of the change, or some evidence that is too clear to be reasonably rejected.

*Second*. Words in different languages are not to be considered as proceeding from the same radix, unless they have the same signification, or one closely allied to it, or naturally deducible from it. And on this point, much knowledge of the primary sense of words, and of the manner in which collateral

## INTRODUCTION.

senses have sprung from one radical idea, is necessary to secure the inquirer from mistakes. A competent knowledge of this branch of etymology cannot be obtained from any one, or from two or three languages. It is almost literally true, that in examining more than twenty languages, we have found *each* language to throw some light on *every other*.

That the reader may have more clear and distinct ideas of what is intended by *commutable letters*, and the principles by which etymological deductions are to be regulated, it may be remarked that *commutable* or *interchangeable letters* are letters of the *same organs*; that is, letters or articulations formed by the same parts of the mouth. Thus, *b*, *m* and *p*, are formed immediately by the lips, the position of which is slightly varied to make the distinction between these letters. *f* and *v* are formed by the lips, but with the aid of the upper teeth. Now the difference of the jointings of the organs to utter these letters is so small, that it is easy for men, in utterance, to slide from one form into another.

The following examples will illustrate this subject.

Labial letters commuted for other labials.

English *bear*, Lat. *fero*, *pario*, G. *bei*, *phero*, D. *volien*, G. *fuhren*.

Here is the same word written in different languages with five different initial letters.

German *wahr*, true, I. *verus*  
Celtic *lamh*, *lar*, the hand, Goth. *lofa*  
L. *gubernio*, Fr. *gouverner*, Eng. *govern*

Dental letters commuted for other dentals.

Eng. *dew*, G. *than*.  
Eng. *good*, G. *gut*.  
Eng. *dare*, Gr. *δαρμαι*.  
Eng. *day*, G. *tag*.  
Eng. *thank*, D. *dancken*.  
Eng. *brother*, D. *bruder*.

Palatal letters commuted for other palatals.

Eng. *call*, W. *gall*, G. *καλλω*.  
Eng. *get*, It. *cattare*.  
Greck. *χαμας*, L. *hiems*, winter.

Dentals converted into sibilants.

Eng. *water*, G. *uasser*.  
Ital. *dans*, a tooth, G. *zahn*.  
Eng. *let*, Fr. *laisser*.  
Ch. *לדור* Heb. *דור*.  
Sax. *tid*, time, G. *zeit*.

Change of linguals.

Eng. *event*, Sp. and Port. *escolla*.  
Fr. *blanc*, white, Port. *branco*.

Change of *f* into *h*.

Sp. *habla* for Lat. *fabula*; *haz* for *fuies*, *face*, *hacer* for *facio*.

It is believed that *n* and *s* are sometimes convertible, as in Latin *pono*, *posui*, and also *i* and *s*, as in English *iron*, German *isen*.

Letters formed by different organs are not commutable, hence we are not to admit a radical word beginning or ending with *b*, *f*, or *v*, to be the same as a word beginning or ending with *g*, *d*, *t*, *r*, or *s*, nor a word whose radical letters are *n*, *z*, to be the same as one whose elements are *i*, *d*, or *c*, *t*. If such words are in any case the same, they must have suffered some anomalous changes, changes which are very unusual, and which are never to be admitted without the clearest evidence.

### ACCENTUATION.

Accent is the more forcible utterance of a particular syllable of a word, by which it is distinguished from the others. The accented syllable of a word serves, therefore, as a kind of resting place or support of the voice, which passes over the unaccented syllables with more rapidity and a less distinct utterance.

Accent is of two kinds, or rather of two degrees of force, *primary* and *secondary*. Words of one syllable can have no accent. Words of two syllables have the primary accent only. Words of three and four syllables may have the primary and secondary accent; but many of them have no secondary accent that deserves notice; such are *dignity*, *enemy*, *annuity*, *fidelity*. In words of four, five, or more syllables, a secondary accent is often essential to a clear, distinct articulation of the several syllables. Thus *heterogeneous* cannot be well uttered without two accented syllables; the fourth syllable receiving the principal stress of the voice, and the first clearly distinguished by more forcible utterance than the second, third, fifth, and sixth.

The accent of most English words has been long established, and, evidently, it has been determined by the natural ease of speaking, without the aid of rules or instruction. If any man should ask, why we lay the accent of such words as *eloquent*, *meditation*, *relation*, *congratulation*, on the last syllable except one, the answer is, that such accentuation renders the pronunciation more easy to the organs of speech, and more agreeable to the ear, than the accentuation of any other syllable. The ease of speaking, and a kind of prosaic melody, resulting from a due proportion of accented and unaccented syllables, which enables the speaker to bound with ease from one accented syllable to another, without omitting those which are unaccented, are the two great principles by which the accentuation of words has been regulated. And it is to be extremely regretted that these principles should, in any instances, be neglected, or forced to yield to arbitrary reasons of derivation, or to a pedantic affectation of foreign pronunciation. When we know that the great mass of a nation naturally fall into a particular manner of pronouncing a word, without any rule or instruction, we may rely upon this tendency as a pretty certain indication that their accentuation is according to the analogies of the language, by which their habits of speaking have been formed, and this tendency cannot be opposed without doing violence to those analogies and to national habits.

Thus, formerly, the word *horizon* was universally accented on the first syllable, and this accentuation was according to the settled analogy of the language. But the early poets had a fancy for conforming the English to the Greek pronunciation, and accented the second syllable; the orthoepists followed them, and now we have this forced, unnatural pronunciation of the learned, in collision with the regular, analogous, popular pronunciation. By this affectation of the Greek accent, the flowing smoothness of the word is entirely lost.

In like manner, an imitation of the French pronunciation of *confesseur* and *successeur*, led the early poets to accent the English words on the first syllable, in violation of analogy and euphony, and some orthoepists affect to follow them, but public usage frowns on this affectation, and rejects their authority.

There are many words in the English language, indeed a large part of the whole number, which cannot be reduced under any general rule of accentuation, as the exceptions to any rule formed will be nearly as numerous as the words which the rule embraces. And, in most instances, we shall find in the structure of the words satisfactory reasons for the difference of pronunciation.

### DISSYLLABLES.

No general rule can be given for the accentuation of words of two syllables. It is, however, worth observing, that when the same word is both a noun, or an adjective and a verb, it happens, in many instances, that the noun or adjective has the accent on the first syllable, and the verb on the last. Instances of which we have in *ab'sent*, to *absent'*, *con'cert*, to *concert'*; *ex'port*, to *export'*. The reason is, the preterite and participles of the verbs require to have the same syllable accented as the verb, but if the first syllable of the preterite and participles were to be accented, it would be difficult to pronounce the words, as may be perceived by attempting to pronounce *ab'senting*, *con'ceded*, *con'ducted*, with the accent on the first syllable.

In a few instances, the word has a different accent when a noun, from that which it has when an adjective, as *dis'gust*, *august'*, *gal'ant*, *gal'lant*.

## INTRODUCTION.

### TRISYLLABLES.

Words of three syllables, derived from dissyllables, usually retain the accent of their primitives. Thus,

*Poët, poetress; pleas'ant, pleas'antly; grâcious, grâciously; relâte, relâted; poli'te, poli'test.*

In like manner, words of four syllables, formed from dissyllables, generally retain the accent of the primitives; as in *collect'ible*, from *collect'*, *servic'able*, from *serv'ice*.

In all cases, the preterite and participles of verbs retain the accent of the verbs.

Words ending in *tion, sion, tian, cious, tious, cial, cian, tial, tiate, tient, cient*, have the accent on the syllable preceding that termination; as *motion, Christian, precious, erudition, patient, &c.*

Words of more than two syllables, ending in *ty*, have, for the most part, the accent on the antepenult; as *gratuity, propriety, prosperity, insensibility.*

Trisyllables ending in *ment*, for the most part, have the accent on the first syllable, as *compliment, detriment*; but to this rule there are many exceptions, and particularly nouns formed from verbs, as *amendment, commandment.*

Words with the following terminations, have the accent on the last syllable except two, or antepenult.

- suons*, as *super'suons, mellif'luous.*
- ferous*, as *buccif'eros, argentif'erous.*
- fluent*, as *circum'fluent.*
- cracy*, as *democ'racy, theoc'racy.*
- gonal*, as *diag'onal, sexag'onal.*
- gony*, as *cosmog'ony, theog'ony.*
- machy*, as *logom'achy, theom'achy.*
- loquy*, as *ob'loquy, ventril'oquy.*
- mathy*, as *polym'athy.*
- meter*, as *barom'eter, hygrom'eter.*
- omy*, as *ecom'omy, astron'omy.*
- ogy*, as *philos'ogy, cosmol'ogy.*
- pathy*, as *ap'athy, antip'athy.*
- phony*, as *eu'phony, sym'phony.*
- parous*, as *orip'arous, rivip'arous.*
- scopy*, as *deuteros'copy, aeros'copy.*
- strophe*, as *apod'strophe, catas'trophe.*
- romous*, as *igniv'omous.*
- vorous*, as *carniv'orous, graminiv'orous.*
- lomy*, as *anal'omy, lithol'omy.*
- raphy*, as *geog'raphy, orthog'raphy.*

Compound words, as *book-case, ink-stand, pen-knife, note-book*, usually have a slight accent, that is, one syllable is distinguished by some stress of voice; but as the other syllable is significant by itself, it is uttered with more distinctness than the syllables of other words which are wholly unaccented. And in some words there are two accents, one on each component part of the word, which are barely distinguishable. Thus in *legislative, legislator, legislature*, the accent on the first syllable can hardly be distinguished from that on the third; and if a speaker were to lay the primary accent on the third syllable, his pronunciation would hardly be noticed as a singularity. Indeed there are some compound words, in which there is so little distinction of accent, that it is deemed unnecessary to mark either syllable or part of the word as accented.

As to a great part of English words, their accent must be learned from dictionaries, elementary books, or practice. There is no method of classification, by which they can be brought under a few simple general rules, to be easily retained by the memory; and attempts to effect this object must only burden the memory, and perplex the learner.

The differences in the accentuation of words, either in books or in usage, are not very numerous. In this respect, the language is tolerably well settled, except in a few words. Among these are *acceptable, commendable, confessor, successor, receptacle, receptory, deceptory, dyspepsy*, which the orthoepists incline to accent on the first syllable. But with regard to most of these words, their accentuation is contrary to common usage, and with regard to all of them, it ought to be rejected. The ease of pronunciation requires the

accent to be on the second syllable, and no effort to remove it can ever succeed.

The words *accessory, desultory, exemplary, and peremptory*, would all have the accent on the second syllable, were it not very difficult, with this accent, to articulate the three last syllables of the derivatives, *accessorily, desultorily, exemplarily, peremptorily*. It is for this reason that the primary accent is laid on the first syllable, and then a secondary accent on the third enables the speaker to articulate distinctly and with tolerable ease the last syllables. If the primary accent is laid on the second syllable, there can be no secondary accent. Yet the natural accent of the primitives being on the second syllable of the three first, and the derivatives little used, we find good speakers often lay the accent on the second syllable, nor is it easy to change the practice.

It is further to be observed that there are some words which, in poetry and prose, must be differently accented, as the accent has been transferred by usage from one syllable to another within the two last centuries. Nares enumerates more than a hundred words, whose accent has been thus changed since the age of Shakspeare. Of this class of words are *aspect, balcony, process, sojourn, convex, contest, retinue, converse*, the adjective *acceptable*, which Milton accents on the first syllable, as he does the verbs *attribute* and *contribute*. But the accent of all these words has been changed; the eight first have the accent indisputably on the first syllable; the two last, on the second syllable.

### OF JOHNSON'S DICTIONARY, AND OF THE MANNER IN WHICH THE FOLLOWING WORK IS EXECUTED.

Dr. Johnson was one of the greatest men that the English nation has ever produced; and when the exhibition of truth depended on his own gigantic powers of intellect, he seldom erred. But in the compilation of his Dictionary, he manifested a great defect of research, by means of which he often fell into mistakes; and no errors are so dangerous as those of great men. The authority created by the general excellence of their works, gives a sanction to their very mistakes, and represses that spirit of inquiry which would investigate the truth, and subvert the errors of inferior men. It seems to be owing to this cause chiefly, that the most obvious mistakes of Johnson's Dictionary have remained to this day uncorrected, and still continue to disfigure the improved editions of the work recently published.

In like manner, the opinions of this author, when wrong, have a weight of authority that renders them extremely mischievous. The sentiment contained in this single line,

*Quid te exempla juvat spinis de pluribus una?*

is of this kind; that we are to make no corrections, because we cannot complete the reformation; a sentiment that sets itself in direct opposition to all improvement in science, literature, and morals; a sentiment which, if it had been always an efficacious principle of human conduct, would have condemned, not only our language, but our manners and our knowledge, to everlasting rudeness. And hence, whenever a proposition is made to correct the orthography of our language, it is instantly repelled with the opinion and *ipse dixit* of Johnson.

A considerable part of Johnson's Dictionary is, however, well executed; and when his definitions are correct, and his arrangement judicious, it seems to be expedient to follow him. It would be mere affectation or folly to alter what cannot be improved.

The principal faults in Johnson's Dictionary are,

1. The want of a great number of well authorized words belonging to the language. This defect has been, in part, supplied by Mason, but his supplemental list is still imperfect, even in common words, and still more defective from the omission of terms of science.

2. Another great fault that remains uncorrected, is the manner of noting the accented syllable; the accent being laid uniformly on the vowel, whether it closes the syllable or not. Thus the accent is laid on *e* in *td'nant* as well as in *td'ner*,

## INTRODUCTION.

and the inquirer cannot know from the accent, whether the vowel is long or short. It is surprising that such a notation should still be retained in that work.

3. It is considered as a material fault, that in some classes of words, Johnson's orthography is either not correct upon principle, or not uniform in the class. Thus he writes *heedlessly*, with *ss*, but *carelessly*, with one *s*; *defence*, with *c*, but *defensible*, *defensive*, with *s*; *rigour*, *inferiour*, with *u*, but *rigorous*, *inferiority*, without it; *publick*, *authentick*, with *k*, but *publication*, *authenticate*, without it; and so of many other words of the same classes.

4. The omission of the participles or most of them, is no small defect, as many of them, by use, have become proper adjectives, and require distinct definitions. The additions of this kind in this work are very numerous. It is also useful both to natives and foreigners, to be able, by opening a dictionary, to know when the final consonant of a verb is doubled in the participle.

5. The want of due discrimination in the definitions of words that are nearly synonymous, or sometimes really synonymous, at other times not, is a fault in all the dictionaries of our language, which we have seen. *Permeate*, says Johnson, signifies to *pass through*; and *permeable*, such as may be *passed through*. But we *pass through* a door or gate; although we do not *permeate* it, or say that it is *permeable*. *Obedience*, says Johnson, is *obsequiousness*, but this is rarely the present sense of the word; so far from it, that *obedience* is always honourable, and *obsequiousness* usually implies meanness. *Peculation*, says Johnson, is *robbery of the public*, *theft of public money*. But as *robbery* and *theft* are now understood, it is neither. Inaccuracies of this kind are very numerous.

6. The mistakes in etymology are numerous; and the whole scheme of deducing words from their original is extremely imperfect.

7. The manner of defining words in Johnson, as in all other Dictionaries, is susceptible of improvement. In a great part of the more important words, and particularly verbs, lexicographers, either from negligence or want of knowledge, have inverted the true order, or have disregarded all order in the definitions. There is a primary sense of every word, from which all the other have proceeded; and whenever this can be discovered, this sense should stand first in order. Thus the primary sense of *make* is to *force* or *compel*; but this in Johnson's Dictionary is the *fifteenth* definition; and this sense of *facio* in Ainsworth, the *nineteenth*.

8. One of the most objectionable parts of Johnson's Dictionary, in our opinion, is the great number of passages cited from authors, to exemplify his definitions. Most English words are so familiarly and perfectly understood, and the sense of them so little liable to be called in question, that they may be safely left to rest on the authority of the lexicographer, without examples. Who needs extracts from three authors, Knolles, Milton, and Berkeley, to prove or illustrate the literal meaning of *hand*? Who needs extracts from Shakespeare, Bacon, South, and Dryden, to prove *hammer* to be a legitimate English word, and to signify an instrument for driving nails? So under *household*, we find seven passages and nearly thirty lines employed to exemplify the plain interpretation, *a family living together*.

In most cases, one example is sufficient to illustrate the meaning of a word, and this is not absolutely necessary, except in cases where the signification is a deviation from the plain, literal sense, a particular application of the term; or in a case where the sense of the word may be doubtful and of questionable authority. Numerous citations serve to swell the size of a Dictionary, without any adequate advantage. But this is not the only objection to Johnson's exemplifications. Many of the passages are taken from authors now little read, or not at all; whose style is now antiquated, and by no means furnishing proper models for students of the present age.

In the execution of this work, we have pursued a course somewhat different; not, however, without fortifying our own opinion with that of other gentlemen, in whose judgment we have confidence. In many cases, where the sense of a word is plain and indisputable, we have omitted to cite any authority. We have done the same in many instances, where the sense of

a word is wholly obsolete, and the definition useful only to the antiquary. In some instances, definitions are given without authority, merely because we had neglected to note the author, or had lost the reference. In all such cases, however, we have endeavoured to be faithful to the duty of a lexicographer.

In general, we have illustrated the significations of words, and proved them to be legitimate, by a short passage from some respectable author, often abridged from the whole passage cited by Johnson. In many cases, we have given brief sentences of our own; using the phrases or sentences in which the word most frequently occurs, and often presenting some important maxim or sentiment in religion, morality, law, or civil policy. Under words which occur in the Scriptures, we have often cited passages from our common version, not only to illustrate the scriptural or theological sense, but even the ordinary significations of the words. These passages are short, plain, appropriate, and familiar to most readers. In a few cases, where the sense of a word is disputed, we have departed from the general plan, and cited a number of authorities.

In the admission of words of recent origin into a Dictionary, a lexicographer has to encounter many difficulties; as it is not easy, in all cases, to determine whether a word is so far authorized as to be considered legitimate. Some writers indulge a licentiousness in coining words, which good sense would wish to repress. At the same time, it would not be judicious to reject all new terms; as these are often necessary to express new ideas; and the progress of improvement in arts and science would be retarded, by denying a place in Dictionaries to terms given to things newly discovered. But the lexicographer is not answerable for the bad use of the privilege of coining new words. It seems to be his duty to insert and explain all words which are used by respectable writers or speakers, whether the words are destined to be received into general and permanent use or not. The future must depend on public taste, or the utility of the words; circumstances which are not within the lexicographer's control.

Lexicographers are sometimes censured for inserting in their vocabularies vulgar words, and terms of art, known only to particular artisans. That this practice may be carried too far, is admitted; but it is to be remarked that, in general, vulgar words are the oldest and best authorized words in language; and their use is as necessary to the classes of people who use them, as elegant words are to the statesman and the poet. It may be added, that such words are often particularly useful to the lexicographer, in furnishing him with the primary sense, which is no where to be found but in *popular use*.

The catalogue of *obsolete* words in Johnson, has been considerably augmented by Mason. We have inserted nearly the whole catalogue, which, we presume, amounts to seven or eight, and perhaps, to ten thousand words.

In exhibiting the origin and affinities of English words, we have usually placed *first in order* the corresponding word, in the language from or through which we have received it; then the corresponding words in the languages of the same family or race; then the corresponding word in the languages of other families. Thus, for example, the word *break* we have from our Saxon ancestors; we, therefore, give the Saxon word first; then the same word in the German language; then the Celtic words; then the Latin; and, lastly, the Hebrew, Chaldaic, and Arabic. This order is not followed in every instance, even of vernacular words, but it is the more general course we have pursued. When there can be no rational doubt respecting the radical identity of words, we have inserted them without any expression of uncertainty. When there appears to be any reason to question that identity, we have mentioned the probability only of an affinity, or inserted a query, to invite further investigation. Yet we are aware that many things, which, in our view, are not doubtful, will appear so to persons not versed in this subject, and who do not at once see the chain of evidence which has led us to our inferences. For this there is no remedy but further investigation.

In regard to words which have been introduced into the language in modern days, we have generally referred them to the language from which they have been immediately received. A great part of these are from the Latin, through the French; sometimes, probably, through the Italian or Spanish. In

## INTRODUCTION.

some instances, however, the order is reversed; indeed, it cannot always be known from which language the words have been received, nor is it a matter of any consequence.

One circumstance, however, deserves to be particularly noticed; that when a vernacular word is referred to the corresponding word in one of the Shemitic languages, we would not have it understood that the English word was *derived* or *borrowed* from that Oriental word. For example, we have given the Shemitic פָּרַק as the verb corresponding with the English *break*, that is, the same word in those languages; not intending by this that our ancestors borrowed or received that word from the Chaldeans, Hebrews, or other Shemitic nation. This is not the fact. It would be just as correct for the compiler of a Chaldee or Hebrew Lexicon, to derive פָּרַק from the English *break* or German *brechen*. So when we deduce *coin*,

قَیْ

through the French, Spanish, or Italian, from the Arabic

we do not consider the word as borrowed from the Arabic, but as proceeding from a common radix. With regard to *vernacular* words, in any European language, such deduction is

always incorrect. Yet errors of this kind abound in every book we have seen, which treats of this subject. The truth is, all *vernacular* words in the languages of Europe are as old as the same words in Asia; and when the same words are found in the Shemitic and Japhetic languages, it is almost demonstrably certain that these words were in use *before the dispersion*; the nations of both families have them from the common stock, and the words, like the families of men which use them, are to be considered as of the same antiquity.

When, therefore, we state the words of another language as corresponding with *vernacular* words in the English, they are offered as affinities, or the same word varied dialectically, perhaps, in orthography or signification, but words from the same root as the English. Thus under the word *bright*, we state the Saxon word, and then the corresponding word in the Ethiopic, the participle of a verb; not that our ancestors borrowed the word from the Ethiopians, but that the verb from which *bright* was derived, though lost in the Saxon, is still retained in the Ethiopic. This fact proves that the ancestors of the Saxons once used the verb, but suffered it to go into disuse, substituting *shine*, *scinan*, in its place.

## ENGLISH ALPHABET.

LANGUAGE or speech consists of human voices or articulate sounds, intended to communicate thoughts or ideas from one person to another.

Articulate voices are those which are formed by closing and opening the organs of speech; the lips, the tongue, the teeth, &c. An articulation is a jointing or closing of the organs, as in pronouncing *ab, ed, op, un, at, eth, ag, eng*.

Articulate sounds of the human voice are represented by letters or characters written, painted, engraved, or printed. A letter, or letters in combination, form syllables and words, which are the symbols of ideas.

To letters, syllables, and words, are annexed certain sounds, which, being uttered by the organs of speech, communicate ideas, through the instrumentality of the ears. When letters and words are written, painted, engraved, or printed, they communicate thoughts, through the instrumentality of the eyes.

In order to the communication of thoughts or opinions correctly, from one person to another, it is essential that both persons should annex the same sounds to the same letters and words; or that the letters and words used, should be symbols of the same thoughts, to both persons. This identity of sounds and symbols, constitutes a particular language, the instrument of social intercourse in a nation.

In the English language, the letters are *twenty-six*; representing sounds, simple or compound; or modifying such sounds.

Letters are of two kinds, *vowels* and *consonants*.

*Vowels* are vocal sounds, uttered by opening the mouth or organs of speech, without a contact of the parts of the mouth. The sound of a perfect vowel may be prolonged at pleasure, without altering the position of the organs. Such is the first or long sound of *a, e, o*.

The vowels in the English are *six*; *a, e, i, o, u, y*. But *i* and *u* are not always simple vowels; and *y* is sometimes used as a consonant. These letters also represent different sounds; a circumstance which creates much difficulty in learning the language.

The broadest or deepest vowel sound is that of *a* in *fall, au* in *ought, aw* in *law*. This sound requires the largest opening of the mouth. A less opening of the organs gives the sound of the Italian *a*, as in *father, ask, last, mast*. A still smaller opening gives the sound of *a* in *fate, make*; and a still smaller, gives the sound of *e* in *metre, feel*. The first sound of *o*, as in *note*, is made by a circular position of the lips; and with a less circular opening of the lips, we utter the sound of *oo* in *tool*.

The first or long sound of *i* is compound, as in *pine*; so is the first sound of *u* in *due, suit, tribunate*. These sounds cannot be exactly expressed or described in writing.

The first or long sound of each vowel is exemplified in the following words:—

<i>a</i> in make, name.	<i>o</i> in note, hold.
<i>e</i> in me, metre.	<i>u</i> in duty, mute.
<i>i</i> in pine, bind.	<i>y</i> in dry, defy.

The short sound of each vowel may be exemplified in the following words:—

<i>a</i> in mat, ban.	<i>o</i> in not, boss.
<i>e</i> in bet, men.	<i>u</i> in dun, must.
<i>i</i> in bit, pin.	<i>y</i> in pity, duty.

The vowel *a* has a third sound, called *broad*, as in *hull, all, walk*. The same sound is expressed by *au* in *taught, and* by *aw* in *saw*. This sound is shortened in *what, quadrant, quality*.

The vowel *e* has the sound of long *a* in a few words, as in *prey, survey, their*.

The letter *i* retains its French sound, that of the English long *e*, in some words which we have received from the French language; as in *pique, marine, machine*.

The vowel *o*, in a few words, has the sound of *oo*, the French *ou*; as in *move, prove, lose*. This sound of *oo* is shortened in *book, look*. In a few words *o* has the sound of *u* short, as in *dore, lore*.

The first sound of *y*, as in *dry*, is the same as that of *i* in *pine*; and its short sound in *glory, pity*, is the same as that of *i* in *pin, brisk*. This short sound of *i* and *y* is, properly, the short sound of *e* long. Hence *little*, when the first vowel is prolonged, becomes *leelle*. Hence *been* is pronounced *bin*.

The short *e* in *let*, is nearly, but not precisely, the short sound of *a* in *late*.

The vowel *u*, in some words, has the sound of *oo* in *book*, as in *pull, full, put*.

The letter *u*, in some words, is pronounced *yu*, in which case it is anomalous, representing both a consonant and a vowel. This pronunciation occurs in words which begin with *u*, forming a syllable by itself; as in *unite, union, unanimous*; and before *r*, as in *failure, measure, insure*, and in a few other cases.

Some English writers alledge that the *proper* sound of *u* is *yu*. This is a great mistake; the true sound is nearly *eu*, but these letters do not express its exact sound.

The letter *w* has its form and its name from the union of two *v's*, in old books; *v* being called *yu*. This name is ill-chosen, and not adapted to express its sound. This letter is, properly, a vowel, with the sound of *oo*, French *ou*, but shortened in pronunciation, as in *dwelt*, pronounced *doowl'*.

## INTRODUCTION.

Two vowels rapidly pronounced in one syllable, constitute a diphthong; as *oi* in *join*; *oy* in *joy*; *ou* in *sound*; and *ow* in *cow*.

Two vowels in succession, when one only is pronounced, do not form a diphthong. We denominate such vowels a *digraph*; that is, *double written*. Such are the following, *ai, ay, au, av, ea, ee, ei, eu, ew, ey, ie, ou, ui*.

Consonants are the letters which represent the articulations of the organs. The letters of this sort, in the English language, are the following, in large and small characters:—B, b; C, c; D, d; F, f; G, g; H, h; J, j; K, k; L, l; M, m; N, n; P, p; Q, q; R, r; S, s; T, t; V, v; X, x; Z, z.

The articulations or jointings made by these letters, may be learned from the following syllables:—*ab, ad, af, ag, aj, ak, al, am, an, ap, aq, ar, as, at, av, az*. Observe the point of contact in the organs which stops the sound.

The letters *b, f, p, m, v*, represent the articulations of the lips, and are called *labials*, or *lip-letters*.

The consonants *d, t, l, n*, and *th*, represent the jointings of the tongue and the upper teeth, or *gum* in which the teeth are inserted. For this reason they are denominated *dentals*, or *tooth-letters*.

The consonants close *c*, close *g*, *k*, and *q*, represent the articulations of the lower part of the tongue and upper part of the mouth, or *palate*: hence they are called *palatals*, or *palate-letters*.

The consonants *s* and *z*, represent the position of the end of the tongue near the upper teeth; and when pronounced, the breath issues or is driven out between the tongue and teeth, with a hissing; hence these letters are called *sibilants*, or *hissing-letters*. The letter *c* before *e, i*, and *y*, is precisely equivalent to *s*.

The letter *r* is uttered with a jar or vibration of the end of the tongue, near the upper teeth.

The letters *j* and *x* represent each two sounds; those of *j* may be expressed by *dj*, and those of *x* by *ks*. The consonant *g* before *e, i*, and *y*, is, in many words, the exact equivalent of *j*.

The close articulations interrupt all distinct sound; such are *k, p*, and *t*, as in *at, ap, at*. These are called *mutes*. *B* and *d* are mutes, but less close.

*C* and *g* are close articulations at the end of syllables, as in *public, rag*. At the beginning of syllables, they are close before *a, o*, and *u*, as in *can, cot, cud; gap, go, gun*. But before *e, i*, and *y*, *c* is equivalent to *s*, as in *cedar, city, cycle*; and *g* is sometimes close, as in *gift*, and sometimes compound, as in *general, ginger*.

The consonants which represent articulations not close, are *f, l, m, n, r, s, v, z*; as in the syllables, *ef, el, em, en, er, es, ev, ez*.

*H* represents a breathing, and is denominated *aspirate*.

There are in English, four articulations, for which there are no single characters; but they are represented by *ch, sh, th*, and *ng*.

The sound of *ch*, as in *church, cheer*, may be represented by *tsh*.

The sound of *sh* occurs in *shine, shall*. It is precisely equivalent to the French *ch*.

*Th* are aspirated in *think, throne*; but vocal in *that, thou*.

The sound of *ng* is simple, and occurs in *sing, thing*, in which the articulation is not close. But in *finger, linger, longer*, the articulation is more close. Orthoepists have represented the pronunciation of the latter words as doubling the articulation; thus, *fing-ger*. But this is a mistake; there is but one articulation; nor is it possible to pronounce two consonants between two vowels, without two articulations; two closings and openings of the organs. *Ban'ner* and *ban'ner* are pronounced alike, with one articulation. Thus consonants may be doubled in writing, but they are not doubled in pronunciation.

Orthoepists represent, that in the combination *nk*, as in *ink, bank, n* has the sound of *ng*. This is a mistake. The sound of *ng* is nasal, the articulation being less close than *nk*. If the *n* in such words had the sound of *ng*, then *ink* would have a nasal sound, *ing*, preceding *k*; but this is not the fact; on the other hand, the close articulation *k*, stops all sound. Walker, then, in representing *bank, brink*, as being pronounced *ban'k, bring'k*, entirely mistakes the fact.

## RULES FOR PRONUNCIATION,

### AND EXPLANATIONS OF THE MANNER OF DESIGNATING SOUNDS IN THIS WORK.

THE first or long sound of the vowels is designated by a horizontal mark over the vowel, thus *a, ē, i, ō, ū, ŷ*. But the necessity of this mark is superseded in words and syllables ending in *e*, after a single consonant, as in *fate, mete, rite, note, mule*, in which the first vowel is long, and the final *e* is silent. So also in the last syllables of *colonnade, fortitude, antipode, suicide, proselyte, consecrate*, and others of similar formation.

The first sound of a vowel is also indicated by the mark of accent immediately after the vowel, as in *fa'vour, cel'dur, v'lat, gl'ry, tru'ly, cy'cle*.

The second or short sound of a single vowel is indicated by one or more consonants terminating the word or syllable, as in *ban, band, pen, bend, pin, flint, not, plot, sun, must, cyst, withstand, descend, rotund*.

The short sound is also indicated by the mark of accent immediately after a single consonant, as in *sul'ary, en'ergy, in'famy, bol'any, hus'band, sym'bol*.

The third or broad sound of *a* is designated by two points under the vowel; thus, *ball, brogd*. But the necessity of these points is superseded by a general rule, that in most words in which *a* is followed by *ld, lk, ll*, as in *bald, balk, fall*; the letter *a* has its broad sound.

This broad sound occurs in the digraphs *au* and *aw*; as in *taught, law*.

When this broad *a* is shortened, the sound is indicated by a single point under *a*; as in *what, quadrant*.

The fourth or Italian sound of *a* is designated by two points over the letter; thus, *bär, mäst, fäther*.

The letter *e*, having the sound of *a* long, has a mark under the letter; as in *prey, convey*.

The letter *i*, when it has the sound of *e* long, has two points over the letter; thus, *fatigue, marine*.

The letters *i* and *o*, when they have the sound of *u* short, have a curving mark; thus, *bird, dove*.

The vowel *o* has, in a few words, the sound of *oo*, French *ou*, which is indicated by two dots over the letter; thus, *möve, löse*. This sound, when shortened, is designated by two points under the vowel; thus, *book, look; bush, full*.

The two letters *oo*, without points, have the sound of the French *ou*; as in *fool, room*.

The digraphs *ai, ay*, always have the sound of the first or long *a*, unless otherwise marked.

The digraphs *ea, ee, ei, ie*, always have the sound of the first or long *e*, unless otherwise marked.

In all cases, when one vowel of a digraph is marked, that vowel has the sound designated by the mark, and the other is quiescent; thus, *upbräid, arrayed, bräed, decüt, siege, appear, course, fläal, brogd, vein, shöve*.

By marking the vowel *o*, in the digraphs *ou* and *ow*, the digraph is distinguished from the diphthong; thus, in *söurce, ou* are a digraph; but in *sour* they are a diphthong; and *böw*, a weapon, is distinguished from *bow*, to bend.

Thus *ou* and *ow*, without a mark, are always diphthongs.

The digraphs *eu, ew*, and *ui*, have the sound of the first *u*; as in *feud, brew, bruise*. The writers who attempt to give *u*; and *eo* after *r*, the sound of *oo*, as in *rude, brew, [rood, broo]*, encourage an affected pronunciation. In all such words, *u* and

*ew* have the proper sound of *u* in *duty*, *tumult*, *lucid*, according to the general usage in England. Some persons affect to pronounce the letters *e* and *u* distinctly *e* and *oo*; but this affectation was condemned by Wallis as early as the reign of Charles II.

The vowel *i*, in the termination *ioe*, is always short; as in *motive*, *relative*, pronounced *motiv*, *relativ*.

The peculiar articulation of the letter *r*, renders it necessary to utter a slight sound of *e* short, between a vowel and that letter. Thus, *bare*, *mere*, *mire*, *more*, *mure*, are pronounced *baer*, *meer*, *mier*, *moer*, *muer*; so in *parent*, *apparent*, pronounced nearly *paerent*, *appaerent*. This necessity makes a slight variation in the sound of *a*, but too inconsiderable to deserve a particular mark of distinction.

The accented syllable is designated by this mark ' at the end; as in *la'bour*, *gl'o'ry*, *ten'or*, *amend'*, *del'icent*, *with-draw'*, *avow'*, *destroy'*, *renew'*.

After syllables having two or more consonants followed by *e* quiescent, or a diphthong, the accent has no effect upon the vowel; as in *duslodge'*, *rejoice'*.

In many cases, the mark over the vowel designates both the sound of the vowel and the accented syllable; as in *abradé*, *upbraidé*, *delicé*, *businessé*.

The letters *ch*, in words from the French, are pronounced as *sh*, and over the letter *c* is a mark, thus *châsse*, pronounced *shayz*.

When either of the consonants *c*, *s*, or *t*, is preceded by the accent, either primary or secondary, and followed by a diphthong or *u* long, it becomes aspirated, and is pronounced as if written *sh*, *ts*, or *th*. Thus *nation*, *social*, *satiâte*, *especial*, *disclosure*, *allusion*, &c., are pronounced *na'shun*, *so'shal*, *sa'sheate*, *espe'shal*, *disclous'chur*, *allu'shun*, &c. When, however, the accent falls upon the vowel or diphthong following *c*, *s*, or *t*, the preceding consonant is not aspirated, as in the words *soci'ety*, *sati'fity*. The above rule is of very great importance, and obtains throughout the whole language, and even extends to all proper names, whether Latin, Greek, or Hebrew. The want of attention to it has led orthoepists into numerous errors.

When two accents occur after *e* or *i*, and before *c* and *t*, they indicate that the preceding syllable ends with the pronunciation of *sh*. Thus, *pre'cious*, *vi'tiate*, are pronounced *pres'h'ous*, *viak'te*; the *c* and *t* blending into the sound of *sh*, in accordance with the rule above laid down.

In such words as *pronunciation*, euphony seems to require that *cia* should be uttered in two syllables, *pro-nun-ci-a'-tion*, to prevent the repetition of the sound of *sh*; *pronunshashun*.

Dr. Ash remarks, that the different vowels, in unaccented syllables, are pronounced alike or nearly so. Thus, in the words *altar*, *alter*, *wunner*, *manor*, *marmor*, all the vowels of the last syllables have the same sound. Hence it is useless to mark the unaccented vowels; their sounds being too obscure and indistinct to be defined, or to be distinguished by marks. The nice distinctions between them, if any exist, are to be acquired only by usage and good taste.

The letters *gh*, in most English words, are quiescent. In the following, they are pronounced like *f*; *cough*, *chough*, *clough*, *enough*, *hough*, *laugh*, *rough*, *slough*, *tough*, *trough*.

*H* after *r*, is mute; as in *rhetoric*.

*G* and *k* before *n*, are mute; as in *gnaw*, *knave*.

*W* before *r*, is mute; as in *wrest*, *wrong*.

In a few words, *h* after *w*, is pronounced before it, as in *what*, *which*.

In the termination *en*, *e* is usually mute; as in *broken*, pronounced *broken*.

The final *e* is mute after *l*, in the following syllables, *ble*, *cle*, *dle*, *fle*, *gle*, *kle*, *ple*, *tle*, *zle*.

*B* after *m*, is mute; as in *dumb*.

*L* is mute before *k*; as in *walk*, before *m*; as in *calm*; and before *f*; as in *half*, *calf*.

*V* is mute after *m*; as in *hymn*.

*Ph* are always pronounced like *f*, as in *philosophy*, but they are silent in *phthine*, pronounced *tizzic*.

\* It is said by some writers, that the accent never falls on a vowel, but always on a consonant. This is a great mistake. The last syllable of *freese* has the accent on the last syllable, and on the vowels which end the syllable. In *open*, the accent is on the first syllable in which there is no consonant.

*P* is mute before *s*; as in *psalm*; and before *t*; as in *pygalism*, *Ptolemy*.

In the terminating syllable of adjectives, *ous*, the letter *o* is always silent.

The unaccented *y*, at the end of words, is short, like *i* in *pin*, *pit*; as in *glory*, *probity*. In the plural of such words, *ies* are pronounced *iz*; as *glories*, pronounced *gloriz*.

But *y*, in monosyllables, has its first sound, as in *dry*, *my*; and in verbs the same sound occurs in the inflections; as in *fly*, *flies*; *try*, *tries*; pronounced *ftze*, *tizes*.

In the termination *fy*, the *y* has its first sound; as in *fortify*. So also *i* in the last syllable of *fortifies*.

*S* has its proper sound after *f*, *p*, *k*, *t*, and *th* aspirate; as in *chiefs*, *caps*, *franks*, *pits*, *deaths*.

*S* has the sound of *z* after *b*, *d*, *g*, *gh*, *l*, *m*, *n*, *r*, *s* and *ss*, *z*, *v*, *av*, *ay*, *ev*, *ey*, *ow*, *oy*, *sh*, *ng*, *th* vocal *ch*, *oe*, *ie*, and after *c* followed by *e* final; as in *robs*, *robes*, *racez*, *rods*, *rides*, *rags*, *rages*, *toils*, *dreams*, *sighs*, *ruins*, *bars*, *weaves*, *roses*, *passes*, *mazes*, *lairs*, *days*, *news*, *preys*, *cows*, *joys*, *brushes*, *sings*, *breathes*, *churches*, *foes*, *flies*.

*S* before *m* has the sound of *z*; as in *spasm*, *baptism*.

The letter *z*, in Welsh words, is pronounced as the vocal *th*, in *thal*, *thou*.

In many cases, a word, the better to express the pronunciation, is written a second time, in the letters most proper for the purpose. In this case, the pronunciation of the radical word is to be observed in the derivatives, unless otherwise noted. Thus, *bright* is written *brite*, to show the pronunciation; and this pronunciation is to be observed in its derivatives, *brightness*, *brightly*.

## POINTED LETTERS.

*Ä*, *ä*, as in *fate*

*Å*, *å*, broad, as in *fall*.

*Ȧ*, *ȧ*, as in *what*.

*Ă*, *ă*, Italian, as in *father*.

*Ê*, *ê*, as in *mete*, *met*.

*Ë*, *ë*, first *a*, as in *prey*.

*Î*, *î*, long, as in *pine*.

*Ï*, *ï*, *e* long, as in *fatigue*.

*İ*, *ı*, short *u*, as in *bird*.

*Ö*, *ö*, short *u*, as in *dove*.

*Ȯ*, *ȯ*, long, as in *note*.

*Ů*, *ů*, like *oo*, as in *move*.

*Ű*, *ű*, like *oo*, in *good*.

*Ț*, long, as in *tune*.

*Ț*, as in *pull*.

*Ț*, initial, as in *unite*.

*Č*, as *h*.

*Č*, as *j*.

*ČH*, as *sh*.

*ČH*, as *h*.

*ȚH*, vocal, as in *that*.

The letter *u*, it has been remarked, has the sound of *yu* in words in which this letter forms a syllable by itself; as in *unit*, *unanimous*, *unholy*, *unhappy*, and in some monosyllables; as in *use*, pronounced *yuse*.

An attempt to extend this sound to *u* after *d*, as in *gradual*, *credulous*, has resulted in changing the sound of *d* to that of *f*; and *gradual* becomes *grafual* or *grafal*; *credulous* is changed to *credfulous*, or *crejulous*. But this pronunciation of Walker is severely condemned by Jamieson and Knowles. So also Walker's *bulshens* for *beautious*; *plentshus* for *plenteous*, are condemned and discarded. The same fate attends Walker's *ingrejent* for *ingredient*, and other words of a like orthography.

The present practice is to give to *u* the sound of *yu*, in such words as *nature*, *feature*, *rapture*; which are pronounced *nat-yur*, *feat-yur*, *rapt-yur*. This practice seems to have been adopted to avoid the common corruption of a change of *t* into *sh*, as in *nulshur*, a pronunciation condemned by the late orthoepists.

But in words of more syllables than two, this pronunciation of *u* as *yu*, in the last syllable, as in *caricature*, *literature*, *judicature*, is not to be commended.

The termination *ed*, in the past tense, and participles of verbs, retains the vowel *e*, in this vocabulary, for showing the proper orthography, especially to foreigners; but in the customary pronunciation, this vowel is omitted, except after *a* and *t*. Thus *abandoned*, *delivered*, *charmed*, are pronounced *abandonnd*, *deliveredd*, *charmdd*. This rule extends to all cases, except to some formal uses of particular words, or to occasional uses of some words in verse.

After *d* and *t* this termination *ed* is, from necessity, pronounced as a distinct syllable; as in *abradedd*, *hatedd*.

THE

# IMPERIAL DICTIONARY,

ENGLISH, TECHNOLOGICAL, AND SCIENTIFIC.

A

**A** is the first letter of the alphabet in most of the known languages of the earth: in the Ethiopic, however, it is the *thirteenth*, and in the Runic the *tenth*. It is naturally the first letter, because it represents the first vocal sound naturally formed by the human organs; being the sound uttered with a mere opening of the mouth, without constraint, and without any effort to alter the natural position or configuration of the lips.

A has, in English, three sounds; the long or slender, as in *place, fate*; the broad, as in *wall, full*, which is shortened in *salt, what*; and the open, as in *father, glass*, which is shortened in *rather, fancy*. Its primitive sound was probably *aw*. A is also an abbreviation of the Saxon *an* or *one*, one, used before words beginning with an articulation; as, a table, instead of *an* table, or one table. This is a modern change; for, in Saxon, *an* was used before consonants as well as vowels; as, *an tid*, a time, *an gear*, a year. [See *AN*.]

This letter is prefixed to many English words; as in *asleep, awake, afoot, aground, again, aboard, now-a-days*, &c. The *a* in these instances, as Horne Tooke observes, is an abbreviation of *on*, an Anglo-Saxon preposition, with the meaning of *in*. In many words, the *a* in the beginning takes the place of *on*. *Alive*, for instance, means *on life*, i. e. in *life*. The *a* formerly often prefixed to our participles in *ing*, both in the active and passive sense; as, *the house is a-preparing*, *he is gone a-walking*, has the same origin.

Among the ancients A was a numeral, denoting 500, and with a dash  $\bar{A}$ , 6000. In the Heb. Syr. Ch. Sam. and Ar. it denotes one or unity.

Among logicians, A, as an abbreviation, stands for a universal affirmative proposition. A asserts, E denies: Thus in *barbara*, a thrice repeated denotes so many of the propositions to be universal. A is also used for *anno* or *ante*; as in *anno Domini*, the year of our Lord; *anno mundi*, the year of the world; *ante meridiem*, before noon; and for *arts* in *artium magister*, master of arts. Among the Romans, A. U. C., stood for *anno ab urbe condita*, from the building of the city, or Rome.

In *algebra*, *a*, and the first letters of the

AB

alphabet, are used to represent known quantities, while the last letters are generally used to represent unknown quantities.

In *music*, A is the nominal of the sixth note in the natural diatonic scale, and corresponds to the *la* of Guido. It is also the name of one of the two natural moods, and it is the open note of the second string of the violin, by which the other strings are tuned and regulated.

In *pharmacy*, *a*, or *ut*, (abbreviations of the Greek *ana*, which signifies *of each*), are used in prescriptions after the mention of two or more ingredients, when it is intended that the specified quantity of each ingredient should be taken.

In *chemistry*, AAA, stand for *amalgama* or *amalgamation*.

In *commerce*, A stands for accepted, as in the case of a bill of exchange. Merchants also number their books by the letters A, B, C, instead of figures. Public officers number their exhibits in the same manner, as the document A or B.

In *heraldry*, A, as a sign, stands for the *dexter chief*, or chief point in an escutcheon.

In *mathematics*, letters are used as representatives of numbers, lines, angles, figures, and quantities. In *arguments*, letters are substituted for persons in cases supposed or stated for illustration, as A contracts with B to deliver property to D.

A. B. C. The first three letters of the alphabet, used for the whole alphabet. Also a little book for teaching the elements of reading.

The balls on the under wire represent units, those on the next above it tens, and so on to hundreds, thousands, &c. The balls at the left end of the engraved

**AB'BE**, [*ab'by*] *n.* [*from abba.*] In a monastic sense, the same as an *abbot*; but, more generally, a title, in Catholic countries, without any determinate rank, office, or rights. Before the French revolution, it was the title of all those Frenchmen who devoted themselves to divinity, or who had at least pursued a course of study in a theological seminary, in the hope that the king would confer on them a real abbey; that is, a certain part of the revenues of a monastery. The abbés were numerous. Some acted as private tutors in families; others were professors of the university, and a great many employed themselves as men of letters. *Abbés commendataires* were such abbés as held abbés in commendam—that is, with the right of administering their revenues or a part of them.

**AB'BOÏ**, *n.* [*formerly Abbat*, from *abba*, latinized *abbas*, or from Heb. plural *אבבא*, *aboth.*] The superior or governor of an abbey or monastery. Originally monasteries were founded in retired places, and the religious had no concern with secular affairs, being entirely subject to the prelates. But the abbots possessing most of the learning, in ages of ignorance, were called from their seclusion to aid the churches in opposing heresies; monasteries were founded in the vicinity of cities; the abbots became ambitious and set themselves to acquire wealth and honours; some of them assumed the mitre, threw off their dependence on the bishops, and obtained seats in parliament. For centuries, princes and noblemen bore the title of abbots. At present, in Catholic countries, abbots are *regular*, or such as take the vow, and wear the habit of the order; and *commendatory*, such as are seculars, but obliged, when of suitable age, to take orders. The title is borne also by some persons, who have not the government of a monastery; as bishops, whose sees were formerly abbeyes.

Unconditional; as, an *absolute* promise.—4. Existing independent of any other cause; as, God is *absolute*.—5. Unlimited by extraneous power or control; as, an *absolute* government or prince.—6. Not relative; as *absolute* space. In gram., the case *absolute* is when a word or member of a sentence is not immediately dependent in government on the other parts of the sentence.

—*Absolute equation*, in astr., is the sum of the optic and eccentric equations. The apparent inequality of a planet's motion in its orbit, arising from its unequal distances from the earth at different times, is called its optic equation; this would subvert, if the planet's real motion was uniform. The eccentric inequality is caused by the planet's motion not being uniform.—*Absolute term* or *number*, in alge., is that which is completely known, and to which all the other part of an equation is made equal; thus, in the equation  $x^2 + 12x = 24$ , the *absolute term* is 24.—*Absolute time*, that which flows equally in itself without relation to any thing external, as duration.—*Absolute space* is space considered without relation to material objects.—*Absolute motion* is the absolute change of place in a moving body, independent of any other motion whatever. It is often applied, however, to motion considered in regard to some fixed point upon the earth.—*Absolute gravity* is that by which a body descends freely and perpendicu-

larly in a vacuum or non-resisting medium; or it may be considered as the whole force with which a body is impelled toward the centre, without regard to modifying circumstances.—*Absolute* in law, signifies without condition or onerousness; as, an *absolute* bond, in distinction from a conditional bond.—*Absolute disposition* in Scots law, is a conveyance unqualified by any burden or reservation in favour of the grantor, or any other person, in contradistinction to a conveyance containing in *gremio* a power of reversion, or any other reservation.

Hence, in the *civil law*, the word was used for *acquit*; and in the *canon law*, for *forgive*, or a sentence of remission. In *ordinary language*, its sense is, to *set free* or *release* from an engagement. Formerly, good writers used the word in the sense of *finish*, *accomplish*; as, to *absolve* work, in *Milton*; but, in this sense, it seems to be obsolete.

In *phar.*, medicines which destroy acidities in the stomach and bowels are called *absorbents*; as, magnesia, prepared chalk, oyster-shells, crab's claws, &c.—3. In *chem.*, this term is applied to substances which have the power of withdrawing moisture from the atmosphere, or of neutralizing acids; as, the earths, alumina, magnesia, &c. *Absorbent grounds* in *paint*, are picture grounds prepared either on board or canvass, so as to have the power of drying up or imbibing the redundant oil from the colours, for the sake of expedition, or to increase the brilliancy of the colours.

*Abstract* terms are those which express abstract ideas, as *beauty*, *whiteness*, *roundness*, without regarding any subject in which they exist; or *abstract* terms are the names of orders, genera, or species of things, in which there is a combination of similar qualities.

*Abstract* or *pure mathematics*, is that which treats of the properties of magnitude, figure, or quantity, absolutely and generally considered, without restriction to any particular object, such as arithmetic and geometry. *Abstract mathematics* is thus distinguished from mixed mathematics, in which simple and abstract quantities previously considered in the former, are applied to particular sensible objects, as astronomy, mechanics, optics, &c. *Abstract numbers* are assemblages of units considered independently of any thing or things that they might otherwise be supposed to represent. For example, 5 is an abstract number while it remains independent; but if we say 5 feet or 5 miles, it is no longer an abstract but a concrete number.—2. **ABSTRACTION**, *n.* The act of separating, or state of being separated.—2. The operation of the mind when occupied by abstract ideas; as, when we contemplate some particular part, or property of a complex object, as separate from the rest. Thus, when the mind considers the branch of a tree by itself, or the colour of the leaves, as separate from their size or figure, the act is called *abstraction*. So also, when it considers *whiteness*, *softness*, *virtue*, *existence*, as separate from any particular objects. The power which the understanding has of separating the combinations which are presented to it, is distinguished by logicians, by the

## ABSURDITY

name of *abstraction*. *Abstraction* is the ground-work of classification, by which things are arranged in orders, genera, and species. We separate in idea the qualities of certain objects which are of the same kind, from others which are different in each, and arrange the objects having the same properties in a class, or collected body.—3. A separation from worldly objects; a recluse life; as a hermit's *abstraction*.—4. Absence of mind; inattention to present objects.—5. In the process of distillation, the term is used to denote the separation of the volatile parts, which rise, come over, and are condensed in a receiver, from those which are fixed. It is chiefly used when a fluid is repeatedly poured upon any substance in a retort, and distilled off, to change its state, or the nature of its composition.

An *absurd* man acts contrary to the clear dictates of reason or sound judgment. An *absurd* proposition contradicts obvious truth. An *absurd* practice or opinion is repugnant to the reason or common apprehension of men. It is *absurd* to say, six and six make ten, or that plants will take root in stone. *Reductio ad absurdum*, *reducing* to an absurdity, is a species of argument which proves not the thing asserted, but the absurdity of everything which contradicts it. It is much used in geometry, in order to demonstrate the converse of a proposition already proved. In this way the proposition is not proved in a direct manner by principles before laid down, but it is shown that the contrary is absurd or impossible; and thus the truth of the proposition is demonstrated indirectly. This method of demonstration is also frequently termed *indirect*, in contradistinction to the ordinary or *direct* method.

The modulation of the voice in reading or speaking, as practised by the ancient Greeks, which rendered their rehearsal musical. More strictly, in English.—2. A particular stress or force of voice upon certain syllables of words, which distinguishes them from the others. Accent is of two kinds, primary and secondary; as in *aspiratum*. In uttering this word, we observe the *first* and *third* syllables are distinguished; the *third* by a full sound, which constitutes the *primary* accent; the *first*, by a degree of force in the voice which is less than that of the primary accent, but evidently greater than that which falls on the second and fourth syllables. When the full accent falls on a vowel, that vowel has its long sound, as in *vo'cal*; but when it falls on an articulation or consonant, the preceding vowel is short, as in *hab'it*. Accent alone regulates English verse.—3. A mark or character used in writing to direct the stress of the voice in pronunciation. Our ancestors borrowed from the Greek language three of these characters, the acute (´), the grave (`), and the circumflex (˘ or ˆ). In the Greek, the first shows when the voice is to be raised; the second when it is to be depressed; and the third, when the vowel is to be uttered with an undulating sound.—4. 7. *Accent in music*, is a certain modulation or swelling of the sounds, to express some emotion or passion, either naturally by the voice, or artificially by means of instruments. Every bar or measure is divided into the accented and unaccented parts, the former being the emphatical, on which the spirit of the music depends.—8. A peculiar tone or inflection of voice.—9. In *math*, accents are employed, in order to avoid the confusion arising from the use of many letters in an algebraical problem or a diagram, and also on other accounts. In this way, the same letter or letters, being distinguished by accents, may be used to represent different magnitudes or quantities; thus *abc* and *a'b'c'*, may stand for magnitudes as different in value as those represented by different letters.

*Accent* must not be confounded with *emphasis*, the latter being used in reference to some one word or part of a sentence, to which a speaker wishes to draw attention, by giving it a more marked pronunciation.

An acid may be composed either of a simple or compound acidifiable base united with one or more acidifying principles. The chief properties by which this numerous and important class of chemical bodies is distinguished, are these: 1. When taken into the mouth they occasion the taste of sourness; they are corrosive, unless diluted with water, and some of them are caustic.—2. They change certain vegetable blue colours to red, and restore blue colours which have been turned green, or red colours which have been turned blue by an alkali.—3. Most of them unite with water in all proportions, with a condensation of volume, and an evolution of heat; and many of them have so strong an attraction for water as not to appear in the solid state.—4. They have a stronger affinity for alkalies than these have for any other substance; and in combining with them, most of them produce effervescence.—5. They unite in definite proportions with earths, alkalies, and metallic oxides, forming interesting compounds, usually called salts.—6. With few exceptions they are volatilized or decomposed by a moderate heat. The old chemists divided acids into animal, vegetable, and mineral, a division now deemed inaccurate. They have also been arranged into those which have a single, and those which have a compound basis or radical. But the following arrangement is considered more specific.

1. Oxygen acids.—2. Hydrogen acids.—3. Acids destitute of both these supposed acidifiers.—4. Acids of organic origin.

**ACTION**, *n.* [*L. actio*. See **ACT**.] 1. Literally, a driving; hence, the state of acting or moving; exertion of power or force, as when one body acts on another: or *action* is the effect of power exerted on one body by another; motion produced. Hence, action is opposed to rest. Action, when produced by one body on another, is *mechanical*; when produced by the will of a living being, *spontaneous* or *voluntary*. [See **Def. 3.**—2. An act or thing done; a deed.

The Lord is a God of knowledge, and by him are *actions* weighed; 1 Sam. ii.

3. In *mech.*, agency; operation; driving impulse; effort of one body upon another; as, the *action* of wind upon a ship's sails; also the effect of such action. *Action and reaction*. Mechanical action is exerted either by percussion or pressure, and in either case, the force exerted by the acting body is repelled or resisted in an equal degree by the body on which it acts. This repulsion or resistance is termed *reaction*; and that "*action* and *reaction* are always equal and contrary," is not only laid down as an axiom in mechanics, but is understood to be a general law of nature, obtaining indeed throughout the whole solar system with the utmost precision.—4. In *eth.*, the external signs or expression of the sentiments of a moral agent; conduct; behaviour; demeanour; that is, motion or movement, with respect to a rule or propriety.—5. In *poet.*, a series of events, called also the subject or fable: this is of two kinds; the principal action, which is more strictly the fable, and the incidental action or episode.—6. ## ACTIVE

mind.—7. Actions are *real*, *personal*, or *mixed*; *real*, or *feudal*, when the demandant claims a title to real estate; *personal*, when a man demands a debt, personal duty, or damages in lieu of it, or satisfaction for an injury to person or property; and *mixed*, when real estate is demanded, with damages for a wrong sustained. Actions are also *civil* or *penal*; *civil*, when instituted solely in behalf of private persons, to recover debts or damages; *penal*, when instituted to recover a penalty, imposed by way of punishment. The word is also used for a *right of action*; as, the law gives an action for every claim.

A *chase in action*, is a right to a thing, in opposition to the possession. A bond or note is a *chase in action*, [*Fr. chose*, a thing,] and gives the owner a right to prosecute his claim to the money, as he has an absolute property in a *right*, as well as in a *thing*, in possession.

9. In some countries of Europe, *action* is a share in the capital stock of a company, or in the public funds, equivalent to our term *share*; and consequently, in a more general sense, to stocks. The word is also used for movable effects.—10. In *paint*, and *sculpt.*, the attitude or position of the several parts of the body, by which they seem to be actuated by passions; as, the arm extended, to represent the act of giving or receiving.—11. Battle; fight; engagement between troops in war, whether on land or water, or by a greater or smaller number of combatants. This and the 8th definition exhibit the literal meaning of *action*—a driving or urging. *Quantity of action*, in physics, the product of the mass of a body by the space it runs through and its velocity.

In many cases *action* and *act* are synonymous; but some distinction between them is observable. *Action* seems to have more relation to the *power* that acts, and its operation and process of acting; and *act*, more relation to the *effect* or operation complete. *Action* is also more generally used for ordinary transactions; and *act*, for such as are remarkable or dignified; as, all our *actions* should be regulated by prudence; a prince is distinguished by *acts* of heroism or humanity.

*Action taking*, in Shakspeare, is used for litigious.

It hangs to the tree by a pedicle two feet long, and contains a white spongy substance. Mankind in almost all ages, and in all civilized countries, have regarded the violation of the marriage bed with abhorrence. It has been punished in various ways, and with different degrees of severity, according to the general manners and morals of the country. When committed between two married persons, it is, according to the English law, termed *double* adultery; and when only one of the parties is married it is termed *single* adultery. Among European nations, a hutory is reckoned a private offence, none but the husband being suffered to intermeddle in the affair; and what is no less remarkable, though the husband be guilty of adultery, the wife, except in Scotland, is not allowed to prosecute him for the same. In England, adultery is accounted a spiritual offence, and therefore the injured party can have no other redress but to bring an action of damages against the adulterer; and to divorce, and strip the adulteress of her dower, is all the punishment which the law inflicts on her. Parliament grants absolute divorces for infidelity to the marriage bed in either party; and the spiritual courts divorce *a mensa et thoro*.

The word is used, Gen. xxx. and xxxi., to describe the speckled and spotted cattle of Laban and Jacob.] A class of silicious, semi-pellucid gems of many varieties, consisting of quartz-crystal, flint, horn-stone, chalcedony, amethyst, jasper, cornelian, heliotrope, and jade, in various combinations, variegated with dots, zones, filaments, ramifications, arborizations, and various figures.

Agates seem to have been formed by successive layers of silicious earth, on the sides of cavities which they now fill entirely or in part. They are esteemed the least valuable of the precious stones. Even in Pliny's time, they were in little estimation. They are found in rocks, in the form of fragments, in nodules, in small rounded lumps, rarely in stalactites. Their colours are various. AGREE, v. i. [Fr. *accrèr*, from *grè*, will, accord. This is contracted from Sp. *agradar*, Port. *id.* to please, to gratify, whence *agradable*, agreeable; from the root of L. *gratia*, W. *rhad*, grace, favour, that comes freely. The primary sense is *advancing*, from the same root as L. *gradior*; W. *rhaz*, [rhath]; Syr. *radah*, to go.] 1. The effect of which is, that marriages grow less frequent, *agreeably* to the maxim above laid down.

*Paley.*

This is a gross error, proceeding from mistake. *Agreeably* signifies, in an agreeable manner; but this is not the sense, nor does the word modify the verb *grow*. The sense is, Marriages grow less frequent, which (fact, or whole member of the sentence, or proposition) is agreeable to the maxim above laid down. This use of *agreeably* is common, but very erroneous.—3. Alike; in the same manner.

By means of experiments with this machine, the weight, elasticity, and many other properties of air may be shown in a very interesting and satisfactory manner. It teaches us how much all vital, generative, nutritive, and alterative powers, depend upon atmospheric air, and to it we are indebted for most of the important facts which we possess concerning the mechanical properties and effects of air. The *air-pump* acts by the elastic force of air, and gradually exhausts the air from a vessel called a receiver, by means of a piston, with a proper valve, working in a cylindrical barrel or tube, somewhat after the manner of a common water pump. *Air-pumps* are variously constructed; the most common forms have two barrels and two pistons, wrought by a toothed wheel, as that represented in the annexed cut. It is necessary for explaining the foundations and investigating the rules of the more difficult parts of arithmetic; and by means of its symbols, it affords directions for computation often more concise, and sometimes more perspicuous, than any which rules expressed in ordinary language can convey. This science was of oriental discovery; but whether among the Arabians or Indians, is uncertain.

The alkalies have been arranged into three classes. 1. Those which consist of a metallic base combined with oxygen, viz., potash, soda, and lithia. 2. That which contains no oxygen, viz., ammonia. 3. Those containing oxygen, hydrogen, and carbon, viz., aconita, brucia, datura, delphin, hyoscinama, morphia, strychnin, quinia, cinchonin, and perhaps some other *truly vegetable alkalies*. The earths, lime, baryta, and strontia, were formerly enrolled among the alkalies, because they agree with them in causticity, solubility in water, and in their effects on vegetable colours, (magnesia agrees with the alkalies in this last particular.) But these earths differ so completely from the alkalies in other properties, that they have been kept separate by later chemists, under the title of *alkaline earths*.

and practice. It was written by Mohammed, in the dialect of the Koreish, which is the purest Arabic; but the Arabian language has suffered such changes since it was written, that the language of the Koran is not now intelligible to the Arabians themselves, without being learned like other dead languages.

AL'KORAN, or AL'CORAN, is also the name of a high tower on Persian buildings.

ALL, *a.* (awl'). [Sax. *eal*; G. *all*; W. *all* or *holl*; Gr. *ἅλ*; Shemitic *ḥal*, from *ḥalal*, *calah*, to be ended or completed, to perfect. The Welsh retains the first radical letter. This is radically the same word as *heal*; for in Sw. *hel*, and in Dan. *hele*, signify *all*, and these words are from the root of *heal*. See CALL, HEAL, and WHOLE.] 1. Every one, or the whole number of particulars.—2. The whole quantity, extent, duration, amount, quality, or degree; as, *all* the wheat; *all* the land; *all* the year; *all* the strength. This word signifies then, the whole or entire thing, or all the parts or particulars which compose it. It always precedes the definitive adjectives *the*, *my*, *thy*, *his*, *our*, *your*, *their*: as, *all* the cattle; *all* my labour; *all* thy goods; *all* his wealth; *all* our families; *all* your citizens; *all* their property. This word, not only in popular language, but in the Scriptures, often signifies, indefinitely, a large portion or number, or a great part. Thus *all* the cattle in Egypt died; *all* Judea and *all* the region round about Jordan; *all* men held John as a prophet; are not to be understood in a literal sense, but as including a large part or very great numbers. This word is prefixed to many other words to enlarge their signification; as, *already*, *always*, *all-prevailing*.

ALL, *adv.* Wholly; completely; entirely; as, *all* along; *all* bedewed; *all* over; my friend is *all* for amusement; I love my father *all*. In the ancient phrases, *all* too dear, *all* so long, this word retains its appropriate sense; as, "he thought them sixpence *all* too dear," that is, he thought them too dear by the sum of sixpence. In the sense of *although*, as "*all* were it as the rest," and in the sense of *just*, or *at the moment*, as "*all* as his straying flock he fed," it is obsolete, or restricted to poetry.

It is *all* one, is a phrase equivalent to *the same thing in effect*; that is, it is *wholly* the same thing. *All* the better, is equivalent to *wholly* the better; that is, better by the whole difference.

ALL, *n.* The whole number; as, *all* have not the same disposition; that is, *all* men.—2. The whole; the entire thing; the aggregate amount; as, our *all* is at stake.

And Laban said, *All* that thou seest is mine; Gen. xxxl.

This adjective is much used as a noun, and applied to persons or things. *All* in *all*, is a phrase which signifies, *all* things to a person, or *every* thing desired.

Thou shalt be *all* in *all*, and I in thee,  
Forever. Milton.

When the words, *and all*, close an enumeration of particulars, the word *all* is either intensive, or is added as a general term to express what is not enumerated; as, a tree fell, nest, eagles, *and all*. *At all*, is a phrase much used by way of enforcement or emphasis, usually in negative or interrogative sentences. He has no ambition *at all*; that is, *not in the least degree*. Has he any property *at all*? *All* and *some*, in Spenser, Mason interprets, *one and all*. But from Lye's Saxon Dictionary, it appears that the phrase is a corruption of the Sax. *ealle æt somne*, *all together*, *all* at once, from *some*, together, at once. [See LYE, under *some*.] *All in the wind*, in seaman's language, is a phrase denoting that the sails are parallel with the course of the wind, so as to shake. *All is well*, is a watchman's phrase, expressing a state of safety. *All*, in composition, enlarges the meaning, or adds force to a word; and it is generally more emphatical than *most*. In some instances, *all* is incorporated into words, as in *almighty*, *already*, *always*; but in most instances, it is an adjective prefixed to other words, but separated by a hyphen.

To make quiet; to pacify or appease; as, to *allay* the tumult of the passions, or to *alloy* civil commotions.—2. To abate, mitigate, subdue, or destroy; as, to *alloy* grief or pain.

This is called *natural* or *implied* allegiance, which arises from the connection of a person with the society in which he is born, and his duty to be a faithful subject, independent of any express promise. *Express* allegiance is that obligation which proceeds from an express promise, or oath of fidelity. *Lo-*

The principal subject is thus kept out of view, and we are left to collect the intentions of the writer or speaker, by the resemblance of the secondary to the primary subject. Allegory is in words what hieroglyphics are in painting. We have a fine example of an allegory in the eightieth Psalm, in which God's chosen people are represented by a vineyard. The distinction in Scripture between a parable and an allegory, is said to be, that a parable is a *supposed* history, and an allegory, a figurative description of *real* facts. An allegory is called a continued metaphor. The following line in Virgil is an example of an allegory. *Claudite jam rivos, pueri, aut prata bibant.* "Stop the currents, young men, the meadows have drunk sufficiently; that is, let your music cease, our ears have been sufficiently delighted. Allegory in *paint.* and *sculpt.*, a figurative representation in which something else is intended than what is exhibited in the representation. It may be of three kinds, physical, moral, or historical. **ALLEGRETTO**, [from *allegro*,] denotes, in *music*, a movement or time quicker than *andante*, but not so quick as *allegro*. **ALLEGRO**. [*It. merry, cheerful; It. leggière; Sp. ligero; Fr. léger, light, nimble. See LIGANT.*] In *music*, a word denoting a brisk movement; a sprightly part or strain; the quickest except *presto*. *Piu allegro* is a still quicker movement. **ALLELU'IAH**, *n.* [*Heb. הַלְלוּ יְהוָה, alloo-eray, Praise to Jah.*] Praise Jehovah; a word used to denote pious joy and exultation, chiefly in hymns and anthems. The Greeks retained the word in their *Εὐχὴ ἰς, Praise to Io*; probably a corruption of *Jah*. The Romans retained the latter word in their *Io triumphe*. **ALLEMAND'**, *n.* A slow air in common time, or grave, solemn music, with a

# ALLEY

slow movement. Also a brisk dance, or a figure in dancing. **ALLEMAN'NIC**, *a.* Belonging to the *Allemanni*, ancient Germans, and to *Allemannia*, their country. The word is generally supposed to be composed of *all* and *manni*, all men. Cluver. p. 68. This is probably an error. The word is more probably composed of the Celtic *all*, other, the root of Latin *alius* and *man*, place; one of another place, a stranger. The Welsh *allman*, is thus rendered, and this seems to be the original word. The name *Allemanni*, seems to have been first given to the Germans who invaded Gaul in the reign of Augustus. **ALLEN'ARLY**, *adv.* Only, merely. A technical word of some importance in Scotch conveyancing. Thus, where lands are conveyed to a father, "for his liferent use *allenarly*," the force of the expression is, that the father's right is restricted to a mere liferent, or, at best, to a fiduciary fee, even in circumstances where, but for the word "*allenarly*," the father would have been unlimited heir. **ALL'ERION**, *n.* In *her.*, an eagle without beak or feet, with expanded wings; denoting Imperialists vanquished and disarmed. **ALLEVEUR**, *n.* A small Swedish coin, value about a half-penny. **ALLEVIATE**, *v. t.* [*Low L. allevio; ad and levo*, to raise, *levio*, light; *Fr. lever; Sp. llevar*, to carry, *levantar*, to raise, and *levante*, a rising, and the eastern coasts of the Mediterranean, the east, so called from the rising of the sun, like *oriental*, from *oriens*, to rise; *Sax. hlifian*, to be eminent. See **LIFT**.] 1. To make light; but always in a figurative sense, as it is not applied to material objects. To remove in part; to lessen, mitigate, or make easier to be endured; applied to evils; as, to *alleviate* sorrow, pain, care, punishment, a burden, &c.: opposed to *aggravate*.—2. To make less by representation; to lessen the magnitude or criminality; to extenuate; applied to moral conduct; as, to *alleviate* an offence. [*This sense of the word is rare.*] **ALLEVIATED**, *pp.* Made lighter; mitigated; eased; extenuated. **ALLEVIATING**, *ppr.* Making lighter, or more tolerable; extenuating. **ALLEVIATION**, *n.* The act of lightening, allaying, or extenuating; a lessening, or mitigation.—2. That which lessens, mitigates, or makes more tolerable; as, the sympathy of a friend is an *alleviation* of grief. I have not wanted such *alleviations* of life, as friendship could supply. (Dr. Johnson's letter to Mr. Hector.) *Borwell.* This use of *alleviation* is hardly legitimate without supplying some word expressing *evil*, as *trouble, sorrow, &c.*—Without such *alleviations* of the cares or troubles of life. **ALLEVIATIVE**, *† n.* That which mitigates. **ALLEVY**, *n.* (al'ly). [*Fr. allée, a passage, from aller to go; It. allad.* Literally, a passing or going.] 1. A walk in a garden; a narrow passage.—2. Thus if a quantity of sugar, worth eight pence the pound, and another quantity worth ten pence, are mixed, the question to be solved by *alligation* is, what is the value of the mixture by the pound. *Alligation* is of two kinds, *medial* and *alternat*; *medial*, when the rate of a mixture is sought from the rates and quantities of the simples; *alternat*, when the quantities of the simples are sought from the rates of the simples, and the rate of the mixture. In modern systems of arithmetic, however, this rule seldom has a place, as the operations regarding the mixture of different ingredients are more expeditiously performed by algebraic equations.

**ALLIGATOR**, *n.* [Properly *allagarto*, from the Spanish and Portuguese *lagarto*, a lizard; *L. lacerta*. The Latin word seems to be connected with *laceratus*, the arm; and the animal may be named from the resemblance of his legs to arms.] The American crocodile.

four feet, with five toes on the fore feet and four on the hind, armed with claws, and a serrated tail. The mouth is very large, and furnished with sharp teeth; the skin is brown, tough, and, on the sides, covered with tubercles. The largest of these animals grow to the length of seventeen or eighteen feet. They live in and about the rivers in warm climates, eat fish, and sometimes catch hogs on the shore, or dogs which are swimming. In winter, they burrow in the earth, which they enter under water and work upward, lying torpid till spring. The female lays a great number of eggs, which are deposited in the sand, and left to be hatched by the heat of the sun. According to its modern acceptance among zoologists, however, the name is no longer confined to the species most commonly found in Carolina, Louisiana, and the other southern states of the union; but it is applied generically to all the other American species, which agree with it in its most prominent and influential characters, and which have been called *caymans*, *jacaris*, &c., by the Spaniards, Portuguese, and Indians, of South America.

According to Pontoppidan, it is composed of *all* and *odh*, all-property, or whole estate. In Sw. *odal*, and in Dan. *odel*, signify *allodial*; the word being used as an adjective; Sw. *odal gods*, that is, *odal goods*, signifies allodial lands; and *odaljord*, *odal earth*, is used as its synonym. *Odalman*, is one who possesses allodial land; *odalbonde*, is a yeoman or freeholder; *odelt* signifies undivided; *o* in Swedish being a prefix, answering to the English *un*, and giving to words a negative signification. If *o* in *odal* is this prefix, and *dul* from the root of *deut*, the word signifies *undivided*. But some obscurity rests on this word. This calendar is sometimes published on one side of a single sheet, and called a *sheet-almanac*. **AL/MUG,** } *n.* In *Scripture*, a tree or  
**AL/GUM,** } wood about which the

was used for musical instruments, stair-  
cases, &c. The *thyinum* is the citron

for the ancients for its fragrance and  
beauty. The *almug*, *almugim*, or *algu-*

**AL/OE,** *n.* (al'oe) [L. *aloe*; Gr. *αλοη*; Heb.  
plur. *אלונים*, *ahleem*, aloe-trees.] A ge-  
nus of plants belonging to the natural  
order Asphodelaceae, and included under

a symbolic plant, especially in Egypt;  
and every one who returns from a pil-  
grimage to Mecca, hangs it over his  
street door, as a token that he has per-  
formed the journey. In Africa, the  
leaves of the Guinea aloe are made into  
durable ropes. Of one species are made  
fishing-lines, bow-strings, stockings,  
and hammocks. The leaves of another  
species hold rain water. A *socotrina*  
yields the well-known medicine of the  
same name, but the greater number of  
the species are mere objects of curiosity.  
**ALOKRESINIC ACID.** See *POLY-*  
*CHROMIC ACID*.

**AL/OES,** in *med.*, is the inspissated  
juice of the aloe. The juice is col-  
lected from the leaves, which are cut  
and put in a tub, and when a large  
quantity is procured, it is boiled to a  
suitable consistence; or it is exposed  
to the sun till all the fluid part is ex-  
haled. There are several kinds sold in

the shops; as, the Socotrine aloe from  
Socotora, an isle in the Indian ocean;  
the hepatic or common Barbadoes  
aloes; and the fetid or emballine aloes.

useful for people of a lax habit and  
sedentary life.

hovah. To let alone is to suffer to  
rest; to forbear molesting or meddling  
with; to suffer to remain in its pre-  
sent state. *Alone*, in this phrase, is an

mountains. But geographers apply  
the name to any high mountains.

The Chaldee verb signifies to join or connect, and the sense of this word, applied to grapes, is a cluster, like *grape* in English. It signifies also in Ch. a tumour, a pustule, a mountain, the sense of which is a lump or mass collected; and this may be the sense of *amber*. In German, Dutch, Swedish, and Danish, it has the name of *burnstone*.] A hard semi-pellucid substance, tasteless and without smell except when pounded or heated, when it emits a fragrant odour. It is found in alluvial soils, or on the sea-shore, in many places; particularly on the shores of the Baltic, in Europe, and at Cape Sable, in Maryland, in the United States. been found in that species of whale, but usually is found floating on the surface of the ocean, in regions frequented by whales; sometimes in masses of from 60 to 225 lbs. weight. In English, after the oriental manner, it is used at the beginning, but more generally at the end of declarations and prayers, in the sense of, *be it firm, be it established*.

And let all the people say *amen*; Ps. cxi.

The word is used also as a *noun*: "All the promises of God are *amen* in Christ," that is, firmness, stability, constancy.

**AMMO'NIA**, *n.* [The real origin of **AM'MONY**, *n.* this word is not ascertained. Some authors suppose it to be from *Ammon*, a title of Jupiter, near whose temple in Upper Egypt it was generated. Others suppose it to be from *Ammonia*, a Cyrenaic territory; and others deduce it from *ammos*, sand, as it was found in sandy ground. Anglicized, this forms an elegant word, *ammony*.] The modern name of the volatile alkali, formerly so called, to distinguish it from the more fixed alkalis. It is a gaseous body, and was first procured in that state by Priestley, who termed it *alkaline air*. He obtained it from sal-ammoniac. It is composed of nitrogen and hydrogen. Ammonia is used for many purposes, both in medicine and scientific chemistry. It is not, however, used in the gaseous state, but in solution in water, and then frequently called *liquid ammonia*. It may be procured naturally from putrescent

## AMMONIARET

animal substances, and artificially from most animal matter, except fat, by subjecting it to heat, in iron cylinders. Bones, hoofs, and horns, decomposed, yield it in abundance. It may also be obtained from vegetable matter, when azote is one of its elements. The decomposition of coal, effected during the production of gas for illumination, is now an abundant source of ammonia.

**AMMO'NIUM**, *n.* A name given to the supposed metallic basis of ammonia. It is a compound of nitrogen and hydrogen, containing a greater proportion of the latter than is contained in ammonia. If mercury, at the negative pole of a galvanic battery, be placed in contact with a solution of ammonia, and the circuit be completed, an amalgam is formed, which, at the temperature of 70° or 80° of Fahrenheit, is of the consistency of butter, but at the freezing point is a firm and crystallized mass. This amalgam is supposed to be formed by the metallic basis, *ammonium*.

**AMMONI'URET**, *n.* A term once applied to certain supposed compounds of ammonia, and a pure metal. All of these have been ascertained to be salts composed of ammonia with an acid of the metal,

It burns with a bright flame, of a short duration, and gives but moderate heat. It is used like jet in making toys. Ampelite is found in France, where husbandmen smear vines with it to kill vermin.

**AMPHIB'IAL**, **AMPHIB'IAN**, **AMPHIB'IA**, *n.* [*Gr. ἀμφι*, both or about, and *βίη*, life.] In *zool.*, a term meaning properly an animal capable of living both under water and on land. Its use, therefore, ought to be restricted to such as have both lungs and gills. Four genera of batrachian reptiles do possess such a double respiratory apparatus, the *axolotls*, *menobranchis*, *sirens*, and *proteus*. These are the only known vertebrated animals which are truly amphibious. In *conversation* otters, seals, walruses, crocodiles, &c. are called amphibial, though none of them can breathe under water. Linnaeus in his arrangement included under this name tortoises, lizards, serpents, frogs, and cartilaginous fishes; but this classification being evidently erroneous has not been adopted by more recent zoologists.

**AMPHIBOLOGY**, *n.* [Gr. *αμφι*, *βαλλω* and *λογος*, speech, *αμφιβαλλω*.] A phrase or discourse, susceptible of two interpretations; and hence, a phrase of uncertain meaning. Amphibology arises from the order of the phrase, rather than from the ambiguous meaning of a word which is called equivocation. We have an example in the answer of the oracle to Pyrrhus. "Aio te Romanos vincere posse." Here *te* and *Romanos*, may either of them precede or follow *vincere posse*, and the sense may be either, you may conquer the Romans, or the Romans may conquer you. The English language seldom admits of amphibology.

The piece, you think, is incorrect, why take it? *Pope. Trumbull.*

**AMPHIBRANCHIA**, *n.* (*αμφι*, and *βραχυς*, the fauces.) The tonsils and parts adjacent to them.

**AMPHICOME**, *n.* [Gr. *αμφι* and *κομη*, hair.] A kind of figured stone of a round shape, but rugged and beset with eminences; called *Erythron*, on account of its supposed power of exciting love. Anciently, it was used in divination; but it is little known to the moderns.

**AMPHICTYONIC**, *a.* Pertaining to the august council of Amphictyons.

**AMPHICTYONS**, *n.* In *Grecian* *his.*, an assembly or council of deputies from the different states of Greece, supposed to be so called from Amphictyon, the son of Deucalion, but this opinion is probably a fable. Ten or twelve states were represented in this assembly, which sat alternately at Thermopylae and at Delphi. Each city sent two deputies, one called *Hieromon* and the other *Pythagoras*. The former inspected the sacrifices and ceremonies of religion; the latter had the charge of deciding causes and differences between private persons. The former was elected by lot; the latter by a plurality of voices. They had an equal right to deliberate and vote in all matters relating to the common interests of Greece.

**AMPHIGENE**, *n.* [Gr. *αμφι* and *γενος*.] In *mineralogy*, another name of the leucite or Vesuvian.

**AMPHIHEXAHEDRAL**, *a.* [Gr. *αμφι*, and *hexahedral*.] In *crystallography*, when the faces of the crystal, counted in two different directions, give two hexahedral outlines, or are found to be six in number.

long on both sides.] In *ancient poetry*, a foot of three syllables, the middle one short and the others long, as in *cästilla*.

**AMPHIPODA**, *n.* [*αμφι* and *πους*, a foot.] The third order of Crustaceans in Cuvier's arrangement of the animal kingdom. The bodies of these animals are generally compressed and curved upon the sides; the eyes are sessile and immovable; many of the species are found in springs and rivulets; others are met with in the salt waters.

**AMPHIPODE**, *n.* One of an order of Malacostraceans, Crustaceous animals. See *AMPHIPODA*.

**AMPHIPODOUS**, [*αμφι* and *πους*, foot.] Having feet on both sides: a term applied to Crustaceans, as the shrimp.

**AMPHIROSTILE** or **AMPHIROSTYLE**, *n.* [*αμφι* and *προστυλος*, a prostyle.] In *arch.*, used to designate structures having the form of an ancient Greek or Roman parallelogramic temple, with a prostyle or portico on each of its ends or fronts, but with no columns on its sides or flanks.

Amphirostyle.

**AMPHIBEN**, } *n.* [Gr. *αμφιβενος*, of *αμφι* and *βενος*, to go; indicating that the animal moves with either end foremost.] A genus of serpents, with the head small, smooth

Amphibena fuliginosa.

and blunt; the nostrils small, the eyes minute and blackish, and the mouth furnished with small teeth. The body is cylindrical, destitute of scales, and divided into numerous annular segments; the tail obtuse, and scarcely to be distinguished from the head, whence the belief that it moved equally well with either end foremost. There are two species; the *fuliginosa*, black with white spots, found in Africa and America; and the *alba*, or white species, found in both the Indies, and generally in ant-hillocks. They feed on ants and earth-worms, and were formerly deemed poisonous; but this opinion is exploded. The aquatic amphiben, *Gordius aquaticus*, Linn., is an animal resembling a horse-hair, found in water, and moving with either end foremost. The vulgar opinion that this is an animated horse-hair is found to be an error. This hair-worm is generated in the common black beetle, in which the parent worm lays its eggs; and is sometimes found in the earth and on the leaves of trees.

**AMPHISCIL**, } *n.* [Gr. *αμφι*, on both *AMPHISCIAN*, } sides, and *σκια*, shadow.] In *geography*, the inhabitants of the tropics, whose shadows, in one part of the year, are cast to the north, and in the other, to the south, according as the sun is in the southern or northern signs.

**AMPHITANE**, *n.* A name given by ancient naturalists to a fossil, called by Dr. Hill *Pyriticolum*. Pliny describes it as of a square figure and a gold colour. *Qu. Cubic pyrites.*

**AMPHITHEATRE**, or **AMPHITHEATRON**, *n.* [Gr. *αμφιθεατρον*, of *αμφι*, about, and *θεατρον*, theatre, from *θιναμι*, to see or look.] 1. An edifice in an oval or circular form, having its area encompassed with rows of seats, rising higher as they recede from the area, on which people used to sit to view the combats of gladiators and of wild beasts, and other sports. The ancient theatre was a semicircle, but exceeding it by a fourth part of its diameter; the amphitheatre was a double theatre, and its longest diameter was to its shortest as 1 1-2 to 1. It was at first of wood, but in the reign of Augustus one was erected of stone. The area or cavea being covered with sand, was called *arena*. Definitely, as "Noah built *an* ark of Gopher wood." "Paul was *an* eminent apostle." Indefinitely, as "Bring me *an* orange." Before a consonant the letter *n* is dropped, as, *a* man; but our ancestors wrote *an* man, *an* king. This letter represents *an* definitely or indefinitely. Definitely, as "I will take you to me for a people, and I will be to you a God;" Ex. vi. Indefinitely, as "The province of a judge is to decide controversies." *An* being the same word as *one*, should not be used with it; "such *an* *one*," is tautology; but custom has sanctioned its use. Although *an*, *a* and *one*, are the same word, and always have the same sense, yet by custom, *an* and *a* are used

exclusively as a definitive adjective, and *one* is used in numbering. Where our ancestors wrote *an*, *two*, *three*, we now use *one*, *two*, *three*. So *an* and *a* are never used except with a noun; but *one*, like other adjectives, is sometimes used without its noun, and as a substitute for it: "One is at a loss to assign a reason for such conduct."

*An* is to be used before a vowel and before a silent *h*, as *an* hour. It is also used before *h*, when the accent of the word falls on any syllable except the first, as in *historian* and *historiographer*. *An* or *a*, as an initial syllable, is often used for a privative, as in *anarchy*, *agalaxy*.

**AN**, in old English authors, signifies *if*; as, "*an* it please your honour." So in Gr. *αν*, or *αν*, Ar. Sam. and L. *an*, *if* or whether; Ir. *an*. Ch. *an*, or *an*, *an*, *if*, whether. It is probably an imperative, like *if*; *gif*, *give*. Qu. Sax. *annan*, or *anan*, to give.

**AN'NA**, *an*, or *ā*. [Gr. *ανα*.] In medical prescriptions, it signifies an equal quantity of the several ingredients; as, wine and honey, *ana*, *an* or *ā* oz. ii. that is, of wine and honey each two ounces.

**ANALEPTIC**, *n.* A medicine which gives strength, and aids in restoring a body to health after sickness; a restorative.

**ANALOGAT**, } *a.* Analogous.

**ANALOGÉAL**, *a.* Having analogy; used by way of analogy; bearing some relation. Thus *analogical* reasoning is reasoning from some similitude which things known bear to things unknown. An *analogical* word is one which carries with it some relation to the original idea. Thus the word *firm* primarily denotes solidity or compactness in a material body; and by analogy, when used of the mind, it conveys the idea of qualities having a similitude to the solidity of bodies, that is, fixedness or immovability.

**ANALOGICALLY**, *adv.* In an analogical manner; by way of similitude, relation, or agreement. Thus, to reason *analogically*, is to deduce inferences from some agreement or relation which things bear to each other.

**ANALOGICALNESS**, *n.* The quality of being analogical; fitness to be applied for the illustration of some analogy.

**ANALOGISM**, *n.* [Gr. *αναλογισμός*.] 1. An argument from the cause to the effect.—2. Investigation of things by the analogy they bear to each other.

**ANALOGIST**, *n.* One who adheres to analogy.

**ANALOGIZE**, *v. t.* To explain by analogy; to form some resemblance between different things; to consider a thing with regard to its analogy to something else.

**ANALOGOUS**, *a.* Having analogy; bearing some resemblance or proportion; followed by *to*; as, there is some-

thing in the exercise of the mind *analogous* to that of the body.

**ANALOGOUSLY**, *adv.* In an analogous manner.

**ANALOGUE**, *n.* (an'al-og) [Gr. *αναλογος*.] 1. A word corresponding with another; an analogous term.—2. Any body which corresponds with, or bears great resemblance to, some other body. Thus, among *geol.*, a recent shell of the same species with a fossil shell, is said to be an *analogue* of the latter.

**ANALOGY**, *n.* [Gr. *αναλογια*, of *ανα*, and *λογος*, ratio, proportion.] 1. An agreement or likeness between things in some circumstances or effects, when the things are otherwise entirely different. Learning *enlightens* the mind, because it is to the mind what *light* is to the eye, enabling it to discover things before hidden. When the things which have an analogy follow a preposition, that preposition must be *between* or *between*; as, there is an analogy *between* plants and animals, or *between* customs.

When one of the things precedes a verb, and the other follows, the preposition used must be *to* or *with*; as, a plant has some analogy *to* or *with* an animal.—2. With *grammarians*, analogy is a conformity of words to the genus, structure, or general rules of a language. Thus the general rule in English is, that the plural of a noun ends in *s*; therefore all nouns which have that plural termination, have an *analogy*, or are formed in *analogy* with other words of a like kind.

In the *inductive philosophy*, when one system of events or appearances is similar to another, and when we infer that the causes in these two systems are also similar, we are said to reason from *analogy*. Such reasonings will be more or less conclusive, according as the similarity is more or less considerable. *Analogical* reasoning is essential in inductive philosophy, though it must be used with caution. By a legitimate use of *analogy*, Newton established his theory of universal gravitation. *Analogy* in *math.*, denotes a similitude of ratios.

**ANALYSIS**, *n.* [Gr. *αναλυσις*, of *ανα*, and *λυσις*, a loosening, or resolving, from *λυω*, to loosen. See *Loose*.] 1. The factitious separation of a compound body into its constituent parts; a resolving; as, an *analysis* of water, air or oil, to discover its elements.—2. A consideration of any thing in its separate parts; an examination of the different parts of a subject, each separately; as, the words which compose a sentence, the notes of a tune, or the simple propositions which enter into an argument. It is opposed to *synthesis*.

In *math.*, analysis is the resolving of problems by algebraic equations. The analysis of finite quantities is otherwise called algebra, or specious arithmetic. The analysis of infinites is the method of fluxions, or the differential calculus. The ancient *analysis* was exhibited only in geometry. It proceeded from the thing sought as taken for granted, through all its consequences, to something really known. It was thus opposed to *synthesis*, in which the process was reversed. [See *SYNTHESIS*.] Euclid's data afford the best examples of the ancient *analysis*. The synthetical method is exhibited in the First Six Books of Euclid's Elements. *Analysis*, in *chem.*, is the decomposition of bodies, as vegetables and minerals, to discover their compo-

nent parts or elements. The dissection of the human body for the purpose of examining its structure and parts, and which is termed anatomy, is an analytical process. In *logic*, analysis is the tracing of things to their source, and the resolving of knowledge into its original principles.—3. A syllabus, or table of the principal heads of a continued discourse, disposed in their natural order.—4. A brief, methodical illustration of the principles of a science. In this sense it is nearly synonymous with *synopsis*.

**AN'ALYST**, *n.* One who analyzes, or is versed in analysis.

Old; that happened or existed in former times, usually at a great distance of time; as, *ancient authors*, *ancient days*. *Old*, says Johnson, relates to the duration of the thing itself, as an *old coat*; and *ancient*, to time in general, as an *ancient dress*. But this distinction is not always observed. We say, in *old times*, as well as *ancient times*; *old customs*, &c. We usually apply both *ancient* and *old* to things subject to gradual decay. We say an *old man*, an *ancient record*; but never the *old sun*, *old stars*, an *old river* or mountain. In general, however, *ancient* is opposed to *modern*, and *old* to *new*, *fresh*, or *recent*. When we speak of a thing that existed formerly, which has ceased to exist, we commonly use *ancient*, as *ancient republics*, *ancient heroes*, and not *old republics*, *old heroes*. But when the thing which began or existed in former times is still in existence, we use either *ancient* or *old*; as, *ancient statues* or *paintings*, or *old statues* or *paintings*; *ancient authors*, or *old authors*, meaning books. But in these examples *ancient* seems the most correct, or best authorized. Some persons apply *ancient* to men advanced in years still living; but this use is not common in modern practice.—2. *Old*; that has been of long duration; as, an *ancient forest*; an *ancient city*.—3. Cowell supposes the word, when used for a flag, to be a corruption of *end-sheet*, a flag at the stern. It is probably the Fr. *enseigne*.

## ANGIOSPERMOUS

from the offending party. This passion  
however, varies in degrees of violence,  
and in ingenuous minds may be attend-  
ed only with a desire to reprove or  
chide the offender. Anger is also ex-  
cited by an injury offered to a relation,  
friend, or party, to whom one is attach-  
ed; and some degrees of it may be ex-  
cited by cruelty, injustice, or oppres-  
sion offered to those with whom one  
has no immediate connection, or even  
to the community of which one is a  
member. Nor is it unusual to see some-  
thing of this passion roused by gross  
absurdities in others, especially in con-  
troversy or discussion. Anger may be  
inflamed till it rises to rage and a tem-  
porary delirium.—2. Pain; smart of a

Linnæus' system, the second order of

Angiospermia. This word is op-  
posed to *gymnospermous*, or naked-  
seeded.

and *τομή*, a cutting.] The opening of a  
vessel, whether a vein or an artery, as

**AN'GLE,** *n.* [*Fr. angle*; *L. angulus*, a  
corner; *Gr. angulos*; *W. ongle*; *Sax.  
angel*, a hook.] In *pop. language*, the  
point where two lines meet, or the  
meeting of two lines in a point; a cor-  
ner. In *geom.*, a plain rectilineal angle  
is the mutual inclination of two straight  
lines which meet one another, but are  
not in the same straight line; or a *rec-  
tilineal angle* is the degree of opening  
or divergence of two straight lines  
which meet one another. The point  
where the lines meet is called the *ver-  
tex* of the angle, or the *angular point*,  
and the lines which contain the angle  
are called its sides or legs. A clear  
idea of the nature of an angle is obtain-  
ed, by gradually opening a carpenter's  
rule, or a pair of compasses; as the  
angle made by the parts of the rule, or  
the legs of the compasses, will become  
greater as the opening widens. It is  
evident that the magnitude of the angle  
does not depend upon the length of the  
lines which form it, but merely on their  
relative positions. An angle is best  
named by a single letter placed at its  
vertex, unless there be more angles  
than one at the same point. In this  
case the angle is generally expressed  
by three letters, the middle one of  
which is placed at the vertex, or angu-  
lar point, and the other two at some  
other point of the lines containing it.  
Thus in fig. 1, the angle contained b

A B and B C  
may be called  
the angle B,  
or the angle  
at B; but in  
fig. 2, where  
there are  
more angles  
than one at the point D, the angle con-  
tained by E D and D B, is called the an-  
gle E D B.

Angles are  
measured by  
an arc of a cir-  
cle, described  
from the ver-  
tex with any  
radius: thus  
the arc D E,  
(fig. 1) describ-  
ed from B as a

centre, is a measure of the angle A B C,  
and the angle A B C is said to be an  
angle of as many degrees, and parts of  
a degree, as there are in the arc D E,  
a circle being always supposed to be di-  
vided into 360 degrees [See *ARC* and  
*CIRCLE.*] Angles receive different  
names, according to their magnitude,  
their construction, their position, and  
the different branches of science in  
which they are employed. A *right an-  
gle* is an angle formed by a straight or  
right line falling on another perpen-  
dicularly, or an angle which is measured  
by an arch of 90 degrees. When a

straight line, as A B, (fig. 3,) standing on another straight line C D, makes the two angles A B C and A B D equal to one another; each of these angles is called a *right angle*.

An *acute angle* is that which is less than a right angle, as F B C. An *obtuse angle* is that which is greater than a right angle; as F B D. *Oblique angles* are either acute or obtuse, in opposition to right angles. A *rectilineal angle* is that which is formed by two straight lines. A *curvilineal angle* is formed by two curved lines. A *mixed angle* is formed by a straight line with a curved line. *Adjacent or contiguous angles* are such as have one leg, common to both angles, both together being equal to two right angles. Thus, in fig. 3, A B C and A B D, or E B C and E B D, are adjacent angles. *Exterior or external angles*, the angles of any rectilineal figure without it, made by producing the sides; thus, if the sides A B, B C, C A, of the triangle A B C (fig. 4) be produced to the points F, D, E, the angles C B F, A C D, B A E, are called *exterior angles*, in opposition to the angles A B C, B C A, C A B, which are called *interior angles*. For *exterior, interior, and alternate angles*, in reference to parallel lines, see EXTERIOR, INTERIOR, and ALTERNATE.

*Vertical angles*. [See VERTICAL.] *Angles of elevation and inclination*. [See ELEVATION and INCLINATION.] *Angles of depression*. [See DEPRESSION.] *Angles of incidence, reflection, and refraction*. [See INCIDENCE, REFLECTION, and REFRACTION.] *Angle of position*, in *astr.* [See POSITION.] *Angle of contact*, the angle which a circle or other curve makes with a tangent at the point of contact. *Angle of direction*, in *mech.*, an angle contained by the lines of direction of two conspiring forces. *Solid angle*, that which is made by more than two plane angles meeting in one point, and not lying in the same plane, as the angle of a cube. *Spherical angle*, an angle on the surface of a sphere, contained between the arches of two great circles which intersect each other. Thus, if A B and B C be arches of great circles intersecting one another, at the point B, the angle A B C is the spherical angle, which they make with one another, and it is equal to the angle of inclination formed by the planes of the great circles A B and B C.—*Angle*

or criticism; reproof; blame. It may sometimes be used for *punishment*, or punishment may be implied in the word, but this is not common. In an *eccl.* sense, it differs from *censure*, says *Ayliffe*; censure, respecting spiritual punishment, and animadversion, a temporal one. Glauville uses the word in the sense of *perception*, but this use is not authorized.

ANIMADVERSIVE, *a.* That has the power of perceiving.

ANIMAL, *n.* [*L. animal*, from *anima*, air, breath, soul; *Græc. aním*, breath. The *W.* has *eniv*, *en*, a being, soul, spirit, and *mal*, a beast; *Arm. anevael*; *San. an, animi*.] An organized body, endowed with life and the power of voluntary motion; a living, sensitive, locomotive body; as man is an intelligent animal. Animals are essentially distinguished from plants by the property of *sensation*. The contractile property of some plants, as the Mimosa, has the appearance of the effect of *sensation*, but it may be merely the effect of *irritability*. The distinction here made between animals and vegetables, may not be philosophically accurate; for we cannot perhaps ascertain the precise limit between the two kinds of beings, but this is sufficiently correct for common practical purposes. The history of animals is called *zoology*. By way of *contempt*, a dull person is called a stupid animal.

ANIMAL, *a.* That belongs or relates to animals; as, *animal functions*.—*Animal* is distinguished from *intellectual*; as, *animal appetites*, the appetites of the body, as hunger and thirst.—The *animal functions*, are touch, taste, motions, &c.—*Animal life* is opposed to *vegetable life*.—*Animal* is opposed also to *spiritual* or *rational*, which respects the *soul* and *reasoning faculties*; as, *animal nature*, *spiritual nature*, *rational nature*.—*Animal food* may signify that food which nourishes animals; but it usually denotes food consisting of animal flesh.—*Animal economy* is the system of laws by which the bodies of animals are governed, and depending on their organic structure.—*Animal spirit* is a name given to the nervous fluid.—*Animal spirits* in the plural, life, vigour, energy.—*Animal heat*, that property of all animals by means of which they preserve a certain temperature which is quite independent of that of the medium by which they are surrounded. The human species preserves a temperature nearly equal, being from 96° to 100° Fahr., in all regions of the globe, and even when exposed to the most extreme degrees of temperature.—*Animal magnetism*, a pretended agent of a peculiar nature, supposed to be capable in some mysterious mode of producing the most powerful effects on the human frame,

This fanciful science appears to have originated with *Mesmer* and other German *luminists*, who believed that the power of a common magnet might be made to act on the human frame, and that this power once imparted to a professor, might afterwards be communicated to others without the agency of ferruginous bodies.—*Animal kingdom*, one of the three principal divisions into which all organized bodies are divided by Linnaeus. It comprehends six classes of animals, namely, *Mammalia*, *Aves*, *Amphibia*, *Pisces*, *Insecta*, *Vermes*. The study of the objects comprehended within this kingdom of nature is termed *zoology*. [See *ZOOLOGY*.]

**ANIMAL-FLOWER**, *n.* In *zool.*, sea-anemone, the name of several species of animals belonging to the genus *Actinia*. They are called *sea-anemone* from the resemblance of their claws or tentacles to the petals of some flowers. These are disposed in regular circles, and tinged with various bright colours. Some of these animals are hemispherical, others cylindrical; others are shaped like a fig. Some are stiff and gelatinous; others, fleshy and muscular; but all can alter their figure by extending their claws in search of food. These animals can move slowly, but are generally fixed by one end to rocks or stones in the sand. On the other extremity is the mouth in the centre, which is surrounded by rows of fleshy claws, and capable of great dilatation. They are very voracious, and will swallow a muscle, or crab, as large as a hen's egg.—The term *Animal-flower* is also extended to many other marine animals, from their resemblance to flowers. They belong to the *Holothurians*, which, with the *Actinians*, were ranged under the *Molluscs* by Linnaeus; and to the *Tubularians* and *Hydras*, which were classed with the *Zoophytes*. They are all arranged under the *Zoophytes* by Cuvier.

**ANIMOSITY**, *n.* [*L. animositas*; *Fr. animosité*; from *L. animosus*, animated, courageous, enraged; from *animus*, spirit, mind, passion. So in Teutonic, *mod*, mind, signifies also pride, passion, anger. *Animus*, spirit, *Gr. anemos*, wind, breath, is from flowing, swelling, rushing, which gives the sense of violent action and passion. See **ANIMAL**.] Violent hatred, accompanied with active opposition; active enmity. *Animosity* differs from *enmity*, which may be secret and inactive; and it expresses a less criminal passion than *malice*. *Animosity* seeks to gain a cause or destroy an enemy or rival, from hatred or private interest; *malice* seeks revenge for the sake of giving pain.

The stalk rises a foot and a half high, dividing into slender branches, garnished with narrow leaves, but into three or four narrow segments. The branches terminate in large loose umbels, composed of smaller umbels or rays, on long foot-

stalks. The flowers are small, and of a yellowish white; the seeds oblong and swelling. Anise seeds have an aromatic smell, and a pleasant warm taste; they are useful in warming the stomach and expelling wind.

A species of history digested in order of time, or a relation of events in chronological order, each event being recorded under the year in which it happened. The books containing annals; as the *Annals of Tacitus*.

**ANNATS**, *n.* [*L. annus*] A year's income of a spiritual living; the first fruits, originally given to the Pope, upon the decease of a bishop, abbot, or parish-clerk, and paid by his successor. In England, they were, at the Reformation, vested in the king, and in the reign of Queen Anne restored to the church, and appropriated to the augmentation of poor livings. In Scotland, *An* or *Annat*, is the half-year's stipend, payable for the vacant half-year after the death of a clergyman, and to which his family, or nearest of kin have right, under the act 1672 c. 13

Hence it may be inferred, that *oil* is named from inflaming, or burning.] 1. To heat; to heat, as glass and iron vessels, for the purpose of rendering them less brittle, or to fix colours; vulgarly called *nealing*. This is done by heating the metal nearly to fluidity, in an oven or furnace, and suffering it to cool gradually. Metals made hard and brittle by hammering, by this process recover their malleability. Lasting or continuing only one year or season; that requires to be renewed every year. Leaves that grow in the spring, and perish in the autumn, are called *annual*, in opposition to *evergreen*. By this name, gardeners designate all plants, which, if sown in the spring, will flower, perfect their seed, and perish in the course of the same season; if two seasons are requisite for this purpose, the plants are then called *biennials*; but *annuals*, if sown in the autumn, become *biennials*.—3. All calculations relating to annuities are made on the principle of improving money at compound interest. The value of life annuities is calculated according to the probable duration of the lives by which they are limited. Governments often borrow money upon annuities, that is, for a certain sum advanced on loan, the government contracts to pay the lender a specific sum for life, or for a term of years. The stock created by such loans is transferable.

These phrases are doubtless legitimate remains of the Gothic dialect.

**ANT**, *n.* [Sax. *æmet*, *emmet*, contracted into *ant*; Ger. *ameise*.] An emmet; a colmiere; a hymenopterous insect of the genus *Formica*, Linn. Ants live in communities, and the internal economy of their habitation, or hillock, presents an extraordinary example of the results of combined industry. Each community consists of males with four wings; of females much larger than the males, and possessing wings only during the pairing season; and of barren females, otherwise called neuters, workers, or nurses, destitute of wings. The young grubs are fed by the females and by the nurses, who are also the formers of the streets and galleries, &c., of the colony, and the performers generally of the work of the community. The males, like the drone bees, are useless to the community after the pairing season. There are many species of ants, from the operations they perform, called mining ants, carpenters, masons, &c. The favourite food of ants is honey, particularly honey-dew; but

some species are carnivorous, and will eat insects, fruit, and almost anything eaten by other animals. The popular belief, that ants store up corn for the winter, is erroneous. The name, ant, is also given to insects of the genus *Termes*. [See *TERMITES*.]

This word literally denotes a natural aversion, which may be of different degrees, and in some cases may excite terror or horror at the presence of an object. Such is the aversion of animals for their natural enemies, as the *antipathy* of a mouse to a cat, or a weasel. Sometimes persons have an insuperable constitutional *antipathy* to certain kinds of food. The word is applied also to aversion contracted by experience or habit; as when a person has suffered an injury from some food, or from an animal, which before was not an object of hatred; or when a particular kind of food or medicine is taken into a sickly stomach, and which nauseates it: the effect is *antipathy*, which is often of long continuance. Antipathy however, is often affected; as when persons pretend a great aversion to things from false delicacy.—2. In *ethics*, antipathy is hatred, aversion or repugnancy; *hatred* to persons; *aversion* to persons or things; *repugnancy* to actions. Of these, *hatred* is most voluntary. *Aversion*, and *antipathy*, in its true sense, depend more on the constitution; *repugnancy* may depend on reason or education.

By a statute passed in the reign of Queen Elizabeth, it was enacted, that no person should exercise any trade, craft, or mystery in England, unless he had previously served to it an apprenticeship of seven years at least. This enactment, however, was repealed in 1814, although the repeal did not interfere with the existing rights, privileges, or bye-laws of the different corporations; but wherever these do not interfere, the formation of apprenticeships, and their duration, are left to be adjusted by the parties themselves. Mr Hutchinson *approbated* the choice. J. Elot.

*Approbate and reprobate.* In *Scots law*, a person is said to approbate and reprobate who takes advantage of one part of a deed, but rejects the rest; as for example, where a disposition on death-bed revokes a previous *liege poustie* conveyance to the prejudice of the heir-at-law, but still gives the estate past the heir. The heir who challenges this deed *ex capite lecti*, in so far as it defeats his interest in the estate, but who abides by it in so far as it revokes the *liege poustie* deed to his prejudice, is said to *approbate* and *reprobate* the deed. **ARCH**, *n.* [*See ARC.*] In arch, a structure composed of separate inelastic bodies, having the shape of truncated wedges, arranged on a curved line, so as to retain their position by mutual pressure. Arches are usually constructed of stones or of bricks. The separate stones which compose the arch, are called *vousoirs*, or *arch-stones*; the extreme or lowest *vousoirs*, are termed *springers*, and the uppermost, or central one, is called the *key-stone*. The under or concave side of the *vousoirs*, is called the *intrados*, and the upper, or convex side, the *extrados* of the arch. When the curves of the intrados and extrados are concentric, or parallel, the arch is said to be *extradosed*. The supports which afford resting and resisting points to the arch, are called piers and abutments. The upper part of the pier or abutment where the arch rests, technically, where it springs from, is the *impost*. The span of an arch, is in circular arches the length of its chord, and generally, the width between the points of its opposite imposts whence it springs. The *rise* of an arch, is the height of the highest point of its intrados above the line of the impost; this point is sometimes called the *under side of the crown*, the highest point of the extrados being the *crown*. Arches are designated in two ways; first, in a general manner, according to their properties, their uses, their position in a building, or their exclusive employment in a particular style of architecture. Thus, there are arches of equilibrium, equi-pollent arches, arches of discharge, askew and reversed arches, and Roman, pointed, and Saracenic

The Scythians among the ancients are said to have been the most expert in the practice of archery. The youth of Persia were carefully trained, in the time of Cyrus, in the use of the bow. The Parthian archers have both historic fame and poetical note. During the middle ages, no archers were equal to those of England. At Cressy, at Poitiers, the bowmen were the main strength of the English forces. Scotch archery was always inferior, despite many legislative attempts at its amelioration. It has ordinary jurisdiction in all spiritual causes arising within the parish of St. Mary-le-Bow, and twelve others; these thirteen parishes forming what is called a *deanery*, exempt from the jurisdiction of the Bishop of London. In addition, this court has a general appellate jurisdiction in ecclesiastical causes appertaining to the province

of Canterbury; it has likewise original jurisdiction on subtraction of wills which have been proved in the prerogative court of the province. In the first state it is called *archil*; and in the second, *lacmas* or *litmas*, *litmas*. Dyers rarely use this drug by itself on account of its dearthness, and the perishableness of its beauty. The chief use they make of it is for giving a bloom to other colours, as pinks, &c., but this bloom soon decays. By the addition of a little solution of tin, this drug is said to give a durable dye; but its colour is

When the screw is placed in an inclined position, as in the accompanying wood-cut, and the lower end immersed in water, by causing the screw to revolve, the water is raised to the upper end. Whatever quantity of water first enters the screw, immediately descends by its own weight to the lowest point of the spiral; but this point being always shifted higher up by the revolution of the screw, water or other fluid may thus be raised to a limited height. The principle of this screw has recently been applied with considerable success to the propelling of steam-vessels. [See **SCREW**.]

A brilliant metallic sublimate of pure arsenic collects in the upper part of the flask. Arsenic is of a steel blue colour, quite brittle. It forms alloys with most of the metals. Combined with sulphur it forms orpiment or realgar, which are the yellow and red sulphurets of arsenic. Orpiment is the true *arsenicum* of the ancients, Plin. 34, 18. Native orpiment appears in yellow, brilliant, and seemingly tallowy masses of various sizes; realgar is red, of different shades, and often crystallized in needles. Arsenic is also found as a mineralizer in cobalt, antimony, copper, iron, and silver ores. It is brought chiefly from the cobalt works in Saxony, where zaffer is made. Of all substances arsenic is that which has most frequently occasioned death by poisoning, both by accident and design. One of the best precipitant tests of this deadly poison is nitrate of silver, and the best remedies against its effects on the stomach are copious draughts of bland liquids of a mucilaginous consistence, which

serve to procure its complete ejection from the stomach. Like many other virulent poisons, it is a safe and useful medicine when judiciously employed. It is used as a flux for glass, and also for forming pigments.

**AS**, *adv.* (az.) [Pers. *asa*, like, similar, as; Gr. *ὡς*; Qu. Fr. *aussi*.] But more probably the English word is contracted from *als*, G. and D. It corresponds in sense with the Persian. 1. Literally, like; even; similar. "Ye shall be as gods, knowing good and evil." "As far as we can see," that is, like, far, equally far. Hence it may be explained by *in like manner*; as, do as

you are commanded.—2.† It was formerly used where we now use *that*.

The relations are so uncertain as they require a great deal of examination. Bacon 3.† It was formerly used for *as if*.

He hes, as he his bilks did know. Waller 4. While; during; at the same time. "He trembled as he spoke." But in most of its uses, it is resolvable into *like*, *equal*, *even*, or *equally*, in *like manner*. In some phrases, it must be considered a nominative word, or other words must be supplied. "Appoint to office such men as deserve public confidence." This phrase may be elliptical for "such men as those who deserve public confidence." *As* seems in some cases, to imply the sense of proportion. "In general, men are more happy, as they are less involved in public concerns." *As*, in a subsequent part of a sentence, answers to *such*; give us such things as you please; and in a preceding part of a sentence, has *so* to answer to it; as with the people, so with the priest.

It is found in a soft or liquid state on the surface of the Dead Sea, which, from this substance, is called *Asphaltite*, or the Asphaltic Lake. It is found also in the earth, in many parts of Asia, Europe, and America. Formerly, it was used for embalming dead bodies; the solid asphalt is still employed in Arabia, Egypt and Persia, instead of pitch for ships; and the fluid asphalt is used for varnishing, and for burning in lamps. A species found in Newfoundland is found excellent as a cement for walls and pavements; very durable in air, and not penetrable by water. A composition of asphalt, lamp-black, and oil, is used for drawing black figures on dial-plates. Of late years, Asphaltum has been strongly recommended to public notice, as excellently adapted for covering roofs, floors, for flagstones in pavements, and for various other useful purposes. The one is called the humid process, by which a solution of the metals is effected by means of acids, after which those sought for are precipitated by proper re-agents. **AT**, *prep.* [Sax. *at*; Goth. *at*; L. *ad*. *At*, *ad*, and *to*, if not radically the same word, often coincide in signification. In W. *at* is *to*, and in Danish, it is the sign of the infinitive mood; in Amh. *ut*, or *ud*, is toward. The word *at* is doubtless the oriental *ars*, *ars*, *atha*, *athah*, Ch. and Heb. to come, to approach. Hence it primarily denotes *presence*, *meeting*, *nearness*, *direction toward*.] In general, *at* denotes *nearness* or *presence*; as, *at* the ninth hour, *at* the house; but it is less definite than *in* or *on*; *at* the house, may be *in* or *near* the house. It denotes also *toward*, *versus*; as, *to aim an arrow at* a mark. From this original import are derived all the various uses of *at*. *At* the sight, is *with*, *present*, or *coming* the sight; *at* this news, *present* the news, *on* or *with* the approach or arrival of this news. *At* peace, *at* war, in a state of peace or war, peace or war existing, being present; *at* ease, *at* play, *at* a loss, &c. convey the like idea. *At* arms, furnished with arms, bearing arms, present with arms; *at* hand, within reach of the hand, and therefore *near*; *at* my cost, *with* my cost; *at* his suit, *by* or *with* his suit; *at* this declaration, he rose from his seat, that is, present, or coming this declaration; whence results the idea in consequence of it. *At* his command, is either *under* his command, that is, literally, coming; or being come his command, in the power of, or in consequence of it. He is good

*at* engraving, *at* husbandry; that is, in performing that business. He deserves well at our hands, that is, from us. The peculiar phrases in which this word occurs, with appropriate significations, are numerous. *At first, at last, at least, at best, at the worst, at the highest or lowest*, are phrases in which some noun is implied; as, *at the first time or beginning; at the last time, or point of time; at the least or best degree, &c.*; all denoting an extreme point or superlative degree. *At all*, is in any manner or degree.—*At* is sometimes used for *to*, or *toward*, noting progression or direction; as, he aims *at* perfection; he makes *at* him, or points *at* him. Our nouns in *-ation*, are immediately from the Latin and are equivalent to our termination in *-ing*. They denote action, the means, the effect of action. *Ate* in *chem.* is a termination affixed to a compound of any acid, containing a maximum of oxygen with an alkaline, earthy, or metallic base, such as *nitrate, sulphate, carbonate, &c. &c.* The termination in *ite*, indicates a lower degree of acidification than a maximum. The cavity of the ball and the tube are filled with water, and the top of the tube closed. Its greatest density is at the earth's surface, and the density decreases in a geometrical progression, while the heights increase in an arithmetical progression. The atmosphere, like other bodies, gravitates toward the earth, and therefore has weight and pressure. The weight at an average, at the level of the sea, is found to be about fifteen pounds on the square inch. If air be condensed so as to exert a pressure of thirty pounds on the square inch, the pressure is said to be *two atmospheres*, a condensation

## ATTACHING

**ATRIUM**, *n.* [Lat.] In *ancient domestic arch.*, a court-yard, or portal open to the air, in the front of a dwelling. It was a species of covered portico, composed of two rows of columns, which formed two narrow aisles and a wide centre. It was the most important, and usually the most splendid apartment of a Roman house. It was roofed over, except an opening in the centre, called *compluvium*, towards which the roof sloped, so as to throw the rain water into a cistern in the floor, called *impluvium*.

**ATROCIOUS**, *a.* [L. *atrox*, *trux*, fierce, cruel.] 1. Extremely heinous, criminal, or cruel; enormous; outrageous; as, *atrocious* guilt or offence—2. Very grievous; violent; as, *atrocious* dispositions.

**ATTACH**, *v. t.* [Fr. *attacher*, to tie, or fasten, to apply, to engage, to stick. It seems to be allied to *attack*, and the sense is, to put, throw, or fall on, hence, to seize and stop, coinciding with the Eng. *take*; Sax. *teccan*; Gr. *τεκεναι*; L. *tango*, for *tango*; Eng. *take*; &c. See **ATTACK**, and **TACK**.] 1. To take by legal authority; to arrest the person by writ; to answer for a debt; applied to a taking of the person by a *civil* process; being never used for the arrest of a criminal. It is applied also to the taking of goods and real estate by an officer, by virtue of a writ or precept, to hold the same to satisfy a judgment to be rendered in the suit.—2. To take, seize, and lay hold on, by moral force, as by affection, or interest; to win the heart; to fasten, or bind by moral influence; as, *attached* to a friend; *attaching* others to us by wealth or flattery.—3. ## ATTACOTTIC

**ATTACHMENT**, *n.* A taking of the person, goods, or estate, by a writ or precept in a civil action, to secure a debt or demand.—2. A writ directing the person or estate of a person to be taken, to secure his appearance before a court. In *England*, the first notice to appear in court is by *summons*; and if the defendant disobeys this monition, a writ of attachment issues, commanding the sheriff to *attach* him, by taking gage, or security in goods, which he forfeits by non-appearance, or by making him find safe pledges or sureties for his appearance. But in trespasses, an attachment is the first process. In the *United States*, *attachment* is more generally the first process, and in some states, the writ of attachment issues at first against the property or person of the defendant. In *Connecticut*, this writ issues against the person, goods, or land, in the first instance, commanding to take the goods and estate of the defendant, if to be found; or otherwise, to take his body. In *England*, witnesses not appearing upon a summons, may be taken by *attachment*. Attachments also issue against persons for contempt of court. The *court of attachments*, in *England*, was held before the verderors of the forest, to *attach* and try offenders against vert and venison. *Foreign attachment*, is the taking of the money or goods of a debtor in the hands of a stranger; as, when the debtor is not within the jurisdiction of the court, or has absconded. Any person who has goods or effects of a debtor, is considered in law as the agent, attorney, factor, or trustee of the debtor; and an attachment served on such person binds the property in his hands to respond the judgment against the debtor.—3. Close adherence or affection; fidelity; regard; any passion or affection that binds a person; as, an *attachment* to a friend, or to a party.

**ATTACK**, *v. t.* [Fr. *attaquer*; It. *attaccare*, to fasten, to engage in battle; *attacco*, a sticking; Sp. *atacar*, to assault, to fasten, or make close, to crum; Port. *atacar*, to attack, to seize, to fasten; Heb. and Ch. *תקע*, *thaco*, to thrust, to drive, to strike. It seems to be allied to *attach*; but the latter verb agrees better with the Eth. *toh*, *took*, to press, whence *atook*, to press, to make close; and the Ch. *תעב*, *teeb*, to accense, to unite.] 1. To assault; to fall upon with force; to assail, as with force and arms. It is the appropriate word for the commencing act of hostility between armies and navies.—2. To fall upon, with unfriendly words, or writing; to begin a controversy with; to attempt to overthrow or bring into disrepute, by satire, calumny, or criticism; as, to *attack* a man or his opinions in a pamphlet.

**ATTAIN**, *v. i.* [Fr. and Norm. *atteindre*; L. *attingo*, to reach, come to, or overtake; *ad* and *tango*, to touch, reach, or strike; that is, to thrust, urge, or push to. It has no connection with L. *attineo*.] 1. To reach; to come to, or arrive at, by motion, bodily exertion, or efforts toward a place or object.

If by any means they might *attain* to Phenice; Acts xxvii.

2. To reach; to come to, or arrive at, by an effort of mind.

Such knowledge is too wonderful for me; it is high; I can not *attain* to it; Ps. cxxxix. Regularly this verb should be always followed by *to*; the omission of *to*, and the use of the verb, in a transitive sense, may have originated in mistake, from the opinion that the verb is from the L. *attineo*, and equivalent to *obtain*.

**ATTAIN**, *v. t.* To gain; to compass; to achieve, or accomplish, that is, to reach by efforts; without following.

Is he wise who hopes to *attain* the end without the means? Tillotson.

This use of the verb is now established; but in strictness *to* is here implied; *attain* to the end. The real sense, as in the intransitive use of the verb, is to *reach* or *come* to the end or purpose in view. This word always implies an effort toward an object. Hence it is not synonymous with *obtain* and *procure*, which do not necessarily imply such effort. We *procure* or *obtain* a thing by *purchase* or *loan*, and we *obtain* by inheritance, but we do not *attain* it by such means. An inattention to this distinction has led good authors into great mistakes in the use of this word.—2. To reach, or come to a place or object by progression or motion.

But ere such tidings shall his ears *attain*.

Hood's *Tasso*.

Canaan he now *attains*.

Milton.

3. To reach in excellence or degree; to equal.

**ATTAINABLE**, *a.* That may be attained; that may be reached by efforts of the mind or body; that may be compassed or accomplished by efforts directed to the object; as, perfection is not *attainable* in this life. From an inattention to the true sense of this word, as explained under *Attain*, authors have very improperly used this word for *obtainable*, *procurable*; as in the following passages: "The kind and quality of food and liquor; the species of habitation, furniture, and clothing, to which the common people of each country are habituated, *must be attainable* with ease and certainty." Paley, *Phil. b. vi. ch. 11*. "Gen. Howe would not permit them to be purchased in Philadelphia, and they (clothes and blankets) were not *attainable* in the country." Marshall's *Life of Washington*, 3, 428. Each of these words should be *obtainable*.

**ATTAINABLENESS**, *n.* The quality of being attainable.

**ATTAINDEK**, *n.* [Norm. Fr. *atteindre*, to corrupt, attain; also, conviction; L. *ad* and *tango*, to stain; Gr. *τιγγω*. See **TIXOE**.] 1. Literally a staining, corruption, or rendering impure; a corruption of blood. Hence,—2. The judg-

ment of death, or sentence of a competent tribunal upon a person convicted of treason, or felony, which judgment *attains*, taints or corrupts his blood, so that he can no longer inherit lands. The consequences of this judgment are, forfeiture of lands, tenements and hereditaments, loss of reputation, and disqualification to be a witness in any court of law. A statute of Parliament attainting a criminal, is called an *act of attainer*.

*Stat. 1 and 8 Will III.*

2. To taint, as the credit of jurors, convicted of giving a false verdict. This is done by special writ of attain't. The conviction of such a crime *attaints* the reputation of jurors, and renders them infamous.—3. To disgrace; to cloud with infamy; to stain.—4. To taint, or corrupt.

Hence, the literal sense is to strain, urge, stretch.] 1. **TORN and TURN.]** One who is appointed or admitted in the place of another, to manage his matters in law. The word formerly signified any person who did business for another; but its sense is now chiefly or wholly restricted to persons who act as substitutes for the persons concerned, in prosecuting and defending actions before courts of justice, or in transacting other business in which legal rights are involved. The word answers to the *procurator* (proctor) of the civilians. Attorneys are not admitted to practise in courts, until examined, approved, licensed, and sworn, by direction of some court; after which they are proper officers of the court. In Great Britain, and in some of the United States, attorneys are not permitted to be advocates or counsel in the higher courts; this privilege being confined to counsellors and sergeants. In other states, there is no distinction of rank, and attorneys practise in all the courts. And in a general sense, the word *attorney* comprehends counsellors, barristers, and sergeants. In Scotland there is not a class of practitioners in law who take the name of attorneys. The office of attorney in Scotland is private, and conferred by letters of attorney, which regulate the extent of power conferred on the attorney. In Virginia, the duties of attorney, counsellor, conveyancer, and advocate, are all performed by the same individual. An attorney may have general powers to transact business for another; or his power may be special, or limited to a particular act or acts.—*Attorney General*, is an officer appointed to manage business for the king, the state, or public; and his duty, in particular, is to prosecute persons guilty of crimes.—*A letter or warrant of attorney* is a written authority from one person empowering another to transact business for him.

This power, principle, or tendency in bodies to unite, is distinguished by philosophers into *attraction of gravity*, or *gravitation*, which extends to a sensible distance, such as the tendency of the planets to the sun, or of a stone, when raised in the air, to fall to the earth, and of which kind is the attraction of magnetism, and of electricity; and into *attraction of cohesion*, or that tendency which is manifested between small particles of matter, at insensible distances, or near the point of contact, to unite them in coherence. The attraction of gravity is supposed to be the great principle which confines the planets in their orbits. Its power or force is directly as the quantity of matter in a body, and inversely as the square of the distances of the attracting bodies.—2. The act of attracting; the effect of the principle of attraction.

*Attraction may be performed by impulse or other means. Newton's Optics.*

3. When it operates on dissimilar particles, producing union, it is distinguished as heterogeneous, and called chemical attraction, or affinity. *Elective attraction*, in chem., a variety of affinity. **ATTWOOD'S MACHINE,** *n.* An ingenious apparatus, invented by the late Mr. Attwood, of Trinity College, Cambridge, to illustrate the doctrine of accelerated motion. Its design is to produce a force of the same kind as gravity, but of much less intensity. It consists of a strong upright pillar, which supports a stand, on which is placed friction wheels. Immediately under the stand is an upright shaft, divided into inches, half-inches, and tenths, for measuring the space through which a body descends. The axis of a wheel rests upon the rims of the friction wheels, and a silk cord passes over this wheel, having equal weights attached to its extremities. In this situation the weights balance each other and no motion ensues; but if to one of the weights a small quantity be added

ed, it will preponderate, and begin to descend, and draw up the other weight. Thus an accelerated motion will be produced, and the rate of descent may be rendered so slow, as to afford time to observe the space descended in a given time, and the velocity required at the end of the descent. A seconds pendulum is attached to the apparatus to measure the time of descent.

**AURICLE**, *n.* [*L. auricula*, dim, from *auris*, the ear.] 1. The external ear, or that part which is prominent from the head.—2. The auricles of the heart are two muscular bags, situated at the base, serving as diverticula for the blood, during the diastole. They resemble the auricle of the ear, and cover the ventricles of the heart, like caps. Their systole or contraction corresponds to the diastole of the heart, and *vice versa*. They receive the blood from the veins, and communicate it to the ventricles.

**AURICULA**, *n.* That species of *Primula* called, from the shape of its leaves, *bear's ear*. It is found wild abundantly on the Swiss Alps, and has for centuries been an object of cultivation by florists, who have succeeded in raising from seed a great number of varieties, having but little resemblance to the wild plant, except in foliage. *Auricula* in *zool.*, is a genus of phytophagous or

plant-eating tracheilipods, whose organs of respiration are formed for breathing air.

**AURICULÆ JUDÆ**, *n.* A sort of fungus which grows on elder trees. A decoction of it in milk has been much esteemed as a gargle in cases of quinsy.

The goddess of the morning, or twilight deified by fancy. The poets represented her as rising out of the ocean, in a chariot, with rosy fingers dropping gentle dew.—3. A species of crowfoot.

*Aurora borealis*, or *lumen boreale*; northern twilight. This species of light usually appears in streams, ascending toward the zenith from a dusky line a few degrees above the horizon. Sometimes it assumes a wavy appearance, as in America, in March, 1782, when it overspread the whole hemisphere. Sometimes it appears in detached places; at other times, it almost covers the hemisphere. As the streams of light have a tremulous motion, they are called, in the Shetland isles, merry dancers. They assume all shapes, and a variety of colours, from a pale red or yellow to

a deep red or blood colour; and in the northern latitudes, serve to illuminate the earth and cheer the gloom of long winter nights. This light is sometimes near the earth. It is said to have been seen between the spectator and a distant mountain. The appearance of the *Aurora borealis* so exactly resembles the effects of artificial electricity, that there is every reason to believe that their causes are identical. When electricity passes through rarified air, it exhibits a diffused luminous stream which has all the characteristic appearances of the *Aurora*, and hence, it is highly probable, that this natural phenomenon is occasioned by the passage of electricity through the upper regions of the atmosphere. The influence of the *Aurora* upon the magnetic needle is now considered as an ascertained fact, and the connection between it and magnetism is further evident from the fact, that the beams or coruscations issuing from a point in the horizon west or north, are frequently observed to run in the magnetic meridian. At the same time, a luminous arch is occasionally seen stretching across the heavens, and crossing the magnetic meridian at right angles. The *Aurora borealis* is said to be frequently accompanied by sound, which is variously described as a hissing, a murmuring, a rumbling, and a crackling sound. This has been so positively asserted by different observers, that no doubt can be entertained of the fact.

**AURO'RAL**, *a.* Belonging to the aurora, or to the northern lights; resembling the twilight.

**AURUM**, *n.* [*L. See AURATE*.] Gold. *Aurum fulminans*, *fulminating gold*, is gold dissolved in aqua regia or nitromuriatic acid, and precipitated by volatile alkali. This precipitate is of a brown yellow, or orange colour, and when exposed to a moderate heat, detonizes with considerable noise. It is a compound of auric acid and ammonia.—*Aurum musivum*, or *musivum*, a sparkling gold-coloured substance, from an amalgam of quicksilver and tin, mixed with sulphur and sal-ammoniac, set to sublime. The mercury and part of the sulphur unite into a cinnabar, which sublimed with the sal-ammoniac, and leaves the aurum musivum at the bottom. It is a sulphuret of tin, and is used as a pigment.

**AUSCULTATION**, *n.* [*L. from antiq. ausc*, *Gr. ouo*, *ouo*, the ear, and *cultus*, from *colo*, to use or exercise.] 1. The act of listening, or hearkening to.—2. In *med.*, a method of distinguishing diseases, particularly in the thorax, by observing the sounds in the part generally by means of a tube applied to the surface. This instrument is called a *stethoscope*. [*See STETHOSCOPE*.] Auscultation may be used with more or less advantage in all cases where morbid sounds are produced, but its general applications are, the auscultation of respiration, the auscultation of the voice; auscultation of the cough, auscultation of sounds foreign to all these, but sometimes accompanying them; auscultation of the actions of the heart; obstetric auscultation. The practice of auscultation is founded upon well established physical principles. Sounds which are caused by certain actions within the cavities of the body, are transmitted through the walls of the cavity, and are perceived

when the ear is applied closely to the surface, or through the intervention of a proper instrument. These sounds are always alike under like circumstances, and are changed when the circumstances which caused them are changed. Hence the physician who renders his ear familiar with the sounds caused by the internal actions of the body in a healthy state, will readily perceive a variation when the part is diseased, and by repeated and extensive observation, will also learn what particular disease is indicated by any particular unnatural sound.

In the word before us, the sense is to throw, or to set; hence *authentic* is set, fixed, made or made certain by the author, by one's own self.] 1. To take satisfaction for, by pain or punishment inflicted on the injuring party.

He will *avenge* the blood of his servants; Deut. xxxii.

Here the thing for which satisfaction is taken is the object of the verb. 3. To revenge. To *avenge* and *revenge*, radically, are synonymous. But modern usage inclines to make a valuable distinction in the use of these words, restricting *avenge* to the taking of just punishment, and *revenge* to the infliction of pain or evil, maliciously, in an illegal manner.—4. In the *passive form*, this verb signifies to have or receive just satisfaction, by the punishment of the offender.

Shall not my soul be *avenged* on such a nation as this? Jer. v.

**AVER**, *v. t.* [Fr. *avérer*; *It. avverare*, to aver, or verify; *Arm. qairya*, from the root of *verus*, true; *Ir. fear*, or *fir*; *W. gwir*. *See VERIFY.*] To affirm with confidence; to declare in a positive or peremptory manner, as in confidence of asserting the truth.

**AVERA'GE**, *n.* [*Norm. aver*, *avere*, cattle, money, goods; *Sp. averio*, from *aver*, or *haber*, *Fr. avoir*, to have, or possess. In *ancient law*, a duty or service which a tenant was bound to render to his lord, by his beasts and carriages, or instruments of husbandry. But *avergium* signifies also the loss of goods in transportation; *Sp. averia*, damage sustained by goods or ships; *Port. abaria*, an allowance out of freight to the master of a ship, for damage sustained: contribution by insurers, to make good a loss; *It. avaria*; *Dan. haverie*, damage of a ship, or waste of goods, extraordinary charges during a voyage. If *avaria* signifies damage, and is from *aver*, or *haber*, Spanish, to have, the sense of the word is probably that which happens or falls, a misfortune, for the verb *have* and *happen* are radically the same word; Spanish *haber*, to have, and to happen, or befall; also, fortune, property. This would give the sense of damage, or of proportion, lot, share, that which falls to each of a number. But the primary sense is not very obvious.] 1. In *commerce*, a contribution to a general loss. When for the safety of a ship in distress any destruction of property is incurred, either by cutting away the masts, throwing goods overboard, or other means, all persons who have goods on board, or property in the ship, contribute to the loss according to their average, that is, the goods of each on board. This principle, introduced into the commerce of Europe from the Rhodian laws, and recognized by the regulations of Wisby, is now an established rule in the maritime laws of Europe; for it is most reasonable, that when one man's property is sacrificed to save a ship, all persons whose property is saved, or in like hazard, should bear their proportion of the loss.—2. From the practice of contributing to bear losses, in proportion to each man's property, this word has obtained the present popular sense, which is, that of a mean proportion, medial sum or quantity, made out of unequal sums or quantities. Thus, if A loses 5 pounds, B 9, and C 10, the sum is 30, and the average 10.—3. A small duty payable by the shippers of goods, to the master of the ship, over and above the freight, for his care of the goods. Hence the expression in bills of lading, "paying so much freight, with primage and average accented." *Average bond*, a deed which it is usual for the parties liable to a general average to execute, empowering an arbiter to ascertain the

value of the property lost, and to fix the proportion of the loss which each proprietor shall bear.—4. In *England*, the breaking up of cornfields, eddish, or roughings. *Upon, or on an average*, is taking the mean of unequal numbers or quantities.

**AV'ERAGE**, *a.* Medial; containing a mean proportion.

**AV'ERAGE**, *v. t.* To find the mean of unequal sums or quantities; or to reduce to a medium; to divide among a number, according to a given proportion; as, to *average* a loss:

**AV'ERAGED**, *pp.* Reduced, or formed into a mean proportion, or into shares proportioned to each man's property.

**AV'ERSE**, *a.* (avers') [See **AV'ERT**.] The literal sense of this word is, *turned from*, in manifestation of dislike. Hence the real sense is, 1. Disliking; unwilling; having a repugnance of mind.

*Avers* alike to flatter or offend. *Pope*  
2. Unfavourable; indisposed; malign. And *Pallas* now *averse* refused her aid.  
*Dryden*.

This word and its derivatives ought to be followed by *to*, and never by *from*. This word includes the idea of *from*; but the literal meaning being lost, the affection of the mind signified by the word, is exerted *toward* the object of dislike, and like its kindred terms, *hatred*, *dislike*, *contrary*, *repugnant*, &c. should be followed by *to*. Indeed it is absurd to speak of an affection of the mind exerted *from* an object. *Averse* expresses a less degree of opposition in the mind, than *detesting* and *abhorring*. Milton once uses *averse* in its literal sense, with *from*, but it is not according to the English idiom.

**AV'ERSELY**, *adv.* (avers'ly.) With repugnance; unwillingly.

**AV'ER'SION**, *n.* [Fr. *aversion*, from L. *averto*.] 1. Opposition, or repugnance of mind; dislike; disinclination; reluctance; hatred. Usually this word expresses moderate hatred, or opposition of mind, not amounting to *abhorrence* or *detestation*. It ought generally to be followed by *to* before the object. [See **AV'ERSE**.] Sometimes it admits of *for*.

A freeholder is bred with an *aversion* to subjection  
*Addison*.

2. Opposition, or contrariety of nature; applied to inanimate substances.

Magnesia, notwithstanding this *aversion* to solution, forms a kind of paste with water.  
*Fourcroy, Trans.*

3. The cause of dislike.

Pain their *aversion*, pleasure their desire.  
*Pope*.

**AV'ERT**, *v. t.* [L. *averto*, *a*, from, and *verto*, to turn, anciently, *vorto*; hence *vertex*, *vortex*, *avertor*; probably allied to L. *vario*; Eng. *veer*.] 1. To turn from; to turn off or away; as, to *avert* the eyes from an object.—2. To keep off, divert, or prevent; as, to *avert* an approaching calamity.—3. To cause to dislike. But this sense seems to be improper, except when *heart*, or some equivalent word, is used; as, to *avert* the *heart* or affections, which may signify to alienate the affections.

This is the thimerstone of Kirwan. It has been sometimes called *yanolite* and *violet shorl*.

**AXINOMANCY, n.** [Gr. *axia*, an axe, and *mantis*, divination.] Among the ancients, a species of divination, by means of an axe or hatchet, performed by laying an agate-stone on a red-hot hatchet, or by fixing a hatchet on a round stake, so as to be polished; then the names of those suspected were re-

ed, and he at whose name the  
 moved, was pronounced guilty.  
**AXIOM**, *n.* [Gr. *axioma*, authority, an  
 assertative sentence, or that which is  
 assumed, from *axio* worthy, *axios*, to  
 think worthy, to esteem; Eng. to ask  
 [to ax];] that which is asked, sought or  
 esteemed. 1. A self-evident truth, or  
 a proposition whose truth is so evident  
 at first sight, that no process of reason-  
 ing or demonstration can make it  
 plainer; as, "the whole is greater than  
 a part." 2. An established principle in  
 some art or science, a principle re-  
 ceived without new proof; as, "things  
 which are equal to the same thing, are  
 equal to one another." It is an axiom  
 in *physical science*, that nature does  
 nothing in vain; that effects are pro-  
 portional to their causes. It is an  
 axiom in *optics*, that the angle of in-  
 cidence is equal to the angle of reflec-  
 tion. In this sense, the general laws  
 of motion are called axioms; as that  
 all motion is naturally rectilinear; and  
 that action and reaction are equal.  
 That it is impossible for a thing both to  
 be and not to be at the same time; and  
 that from nothing, nothing can arise,  
 are axioms in metaphysical science.  
 All common notions of the mind,  
 whose evidence is so clear and forcible  
 that a man cannot deny them without  
 renouncing common sense and natural  
 reason, are also called axioms. The ax-  
 ioms of Euclid are very general propo-  
 sitions, and so also are the axioms of the  
 Newtonian philosophy; but these two  
 kinds of axioms have very different  
 origins. The former appear true upon  
 a bare contemplation of our ideas;  
 whereas, the latter are the result of  
 the most laborious induction. The  
 former are also necessary or absolute  
 truths, whose contraries the mind can-  
 not conceive to be possible; but the  
 latter are contingent truths depending  
 on the will of the Supreme Being, and  
 to suppose their contraries involves no  
 contradiction or impossibility. They  
 are true, because the Creator has wil-  
 led them to be so, but they might have  
 been otherwise than we find them to  
 be. Axioms, or self-evident propo-  
 sitions, furnish the first principles of  
 reasoning, and all true science must be  
 based upon them, but we must take  
 care in our reasonings not to confound  
 the axioms of one science with those  
 of another, as has often been done.

**AXIOMAT'IC**, *a.* Pertaining to

## B

**B** IS the second letter, and the first articulation, or consonant, in the English, as in the Hebrew, Greek, Latin, and most other alphabets. In the Ethiopic, it is the ninth letter, and its shape is that of a hut. Perhaps from this or other like figure, it received its Hebrew name, *beth*, a house. It is a *mute*, and a *labial*, being formed by pressing the whole length of the lips together, as in pronouncing *eb*. It is less perfectly mute than *p*, as may be perceived by pronouncing the syllables *ab* and *ap*. It is convertible, 1st, with *p*, as in the Celtic, *ben* or *pen*, a mountain; in the English, *beak* and *peak*, *beck* and *peck*; 2d, with *v*, as in the German, *silver* for *silber*; and in Spanish, *b* and *v* are used indifferently, 3d, with *f*, as in *bore* and *perforo*; Eng. *bear*, L. *fero*; in the Celtic *bun*, *hunadh*, *bunadh*, stock, origin, foundation; English, found; L. *fundamentum*; with the Greek, as *Bilip*, for *Εβρις*; 4th, with *v* and *so*; as, Fr. *for*, L. *ferus*; *far*, Fr. *huit*, the *wick* of a candle. The Greek *B* is always pronounced like the English *V*, and the Russian *B* corresponds with the Greek. In composition, the letter *B* is changed into *p* before the letter *p*; as in *opprimo*, from *ob* and *premo*; *oppugno*, from *ob* and *pugno*; into *f*, before *f*, as in *affero*, from *ob* and *fero*; into *c* before *c*, as in *occido*, from *ob* and *caedo*, and *credo*. As a numeral *B* was used by the Hebrews and Greeks, as now by the Arabians, for 2; by the Romans for 200, and with a dash over it thus, *B* for 2000. *B* is used also as an abbreviation; thus *B. A.* stand for bachelor of arts; *B. L.* for bachelor of laws; *B. D.* for bachelor of divinity; *B. E.* before the decrees of the old Romans, for *bonum factum*. In music, *B* stands for the tone above *A*; *B♭* for *B* flat, or the semitone major above *A*. *B* also stands for *bass*, and *B. C.* for *basso continuo*, or thorough bass.

 twelve inches long, bending like horns,

A B is the beam which rests

in a horizontal position, and is capable of turning on the centre of motion 'C'. D and E are the scales which are suspended from the points A and B, the extremities of the beam, called the centres of suspension. Midway between the centres of suspension, and directly above the centre of motion, there rises from the upper surface of the beam a perpendicular slender stem

## BALANCE

called the *tongue*, which, when the beam is horizontal, points to the top of the handle F, by which the whole is suspended. In a properly constructed balance, the beam should rest in a horizontal position, when the scales are either empty or loaded with equal weights; a very small addition of weight put into either scale should cause the beam to deviate from the horizontal position, which property is termed the *sensibility* of the balance; the arms of the beam should be inflexible, exactly similar, equal in weight and length, and as long as possible. The centres of suspension of the scales, and the centre of gravity of the beam should be all in one straight line, and the centre of motion should be a little above the centre of gravity. The centre of motion, and the centre of suspension, should cause as little friction as possible. *False balancer*, a balance constructed for fraudulent purposes, having the arms of unequal lengths, but of equal weights. When the scales are empty, the beam rests in a horizontal position, and the balance appears to be just, but when a weight is put into the scale suspended from the short arm, a less weight of goods put into the other scale will be sufficient to cause the beam to settle in a horizontal position, and produce an apparent equilibrium. The readiest way of detecting such a balance, is to make the weight and the article weighed to change places, for then the scale suspended from the longer arm will immediately preponderate. The Roman balance, our steel-yard, consists of a lever, or beam, move-

able on a centre, and suspended near one of its extremities [See STEEL-YARD.] Hence.—2. One of the simple powers in mechanics, used for determining the equality or difference of weight in heavy bodies, and consequently their masses or quantity of matter.—3. *Figuratively*, an impartial state of the mind, in deliberating; or a just estimate of the reasons and arguments on both sides of a question, which gives to each its due weight, or force and importance.—4. A *balance* signifies equal weight, or equality, it is by custom used for the *weight or sum necessary to make two unequal weights, or sums equal*; that which is necessary to bring them to a balance or equipoise. Hence, in accounts, *balance* is the *difference of two sums*; as upon an adjustment of accounts, a *balance* was found against A in favour of B. Hence, to pay a *balance*, is to pay the *difference*, and make the two accounts equal.—5. *Balance of trade*, is an equal exportation of domestic productions, and importation of foreign. But, usually, the term is applied to the *difference* between the amount or value of the commodities exported and imported. Hence the common expression, *The balance of trade is against, or in favour of a country*.—6. *Equipoise*, or an equal state of power between nations; as, the *balance of power*.—7. *Equipoise*, or an equal state of the passions.

The sense is, that which is set, laid or extended. Applied to a mass of earth, it is a collection, that which is thrown or laid together.] 1. A mound, pile, or ridge of earth, raised above the surrounding plain, either as a defence or for other purposes; 2 Sam. xv. 15.—2. Any steep acclivity, whether rising from a river, a lake, or the sea, or forming the side of a ravine, or the steep side of a hillock on a plain. Banks are commonly divided into two great classes; banks of deposit, and banks of circulation. This

## BANKING

division, however, is not a very distinct one; for there is no bank of deposit that is not at the same time a bank of circulation, and few or no banks of circulation that are not also banks of deposit. But the term banks of deposit, is meant to designate those which keep the money of individuals, and circulate it only; while the term banks of circulation is applied to those which do not thus confine their circulation, but issue notes of their own payable on demand. The Bank of England is the principal bank of circulation in the empire; but it, as well as the private banks in England and Scotland that issue notes, is also a bank of deposit. The establishment of banks, has contributed in no ordinary degree to give security and facility to all sorts of commercial transactions. They afford safe and convenient places of deposit for the money that would otherwise have to be kept at a considerable risk in private houses. They also prevent in a great measure the necessity of carrying money from place to place to make payments, and enable them to be made in the most convenient and least expensive manner.—6. quicksilver is then supported in the tube, of equal weight with the incumbent atmosphere. This instrument was invented by Torricelli, of Florence, in 1643. Its uses are to indicate changes of weather, and to determine the altitude of mountains, by the falling and rising of the mercury. For this purpose the tube is fixed to a graduated scale, so that the smallest variation in the column is visible. There are various kinds of barometers, such as the common barometer, the diagonal barometer, the horizontal, or rectangular barometer, the wheel barometer, the steel-yard barometer, the pendulum barometer, compound barometer, the marine barometer, of which there are several kinds, the portable barometer, &c. The two kinds most in use, are the common upright barometer, and the wheel barometer.

The common barometer, which consists of an upright tube filled with mercury, with a basin

at the lower end, and a scale attached to the top, to mark the rise and fall of the mercury, is, when properly constructed, the most accurate of all barometers. The wheel barometer is far from being accurate, but it is often preferred for ordinary use, on account of the greater range of its scale, by which small differences in the height of the column of mercury are more easily observed. The portable barometer, which is used for measuring the height of mountains, is just a common barometer, having a movable basin with a screw, by which the mercury may be forced up to the top of the tube, when the instrument has to be carried from place to place.

**BE**, a prefix, as in *because*, *before*, *beet*, *bedeck*, is the same word as *by*; Sax. *be*, *big*; Goth. *bi*. It is common to the English, Saxon, Gothic, German, Dutch, Danish, and Swedish languages. It occurs probably in the Russian, but is written *po*, as it is in *providere*, and a few other words in the Latin. It denotes nearness, closeness, about, on, at, from some root signifying to pass, or to press. [See **BY**.] That this word is the Shemite *ב*, used as a prefix, is certain, not only from its general applications, which may be seen by comparing the uses of the word, in the Hebrew for instance, with those in the Saxon; but from its use in particular phrases, particularly in its use before the name of the Supreme Being in swearing. Hence we find that *ב* is not from *בא*, *bah*, nor from *בני*, *bith*, as Parkhurst supposes, but is an abbreviation of *big*, which is used in the Saxon *bigspell*, a proverb, a *by-word*; *bi-standing*, to stand by.

*beauty* In the face, the regularity and  
symmetry of the features the colour of  
the skin, the expression of the eye, are  
among the principal properties which

# BECAFICO

constitute *beauty* But as it is hardly  
possible to define all the properties  
which constitute beauty, we may ob-  
serve in general, that beauty consists  
in whatever pleases the eye of the be-  
holder, whether in the human body, in  
a tree, in a landscape, or in any other  
object Beauty is *intrinsic*, and per-  
ceived by the eye at first view, or *re-  
lative*, to perceive which, the aid of  
the understanding and reflection is re-  
quisite Thus, the beauty of a machine  
is not perceived, till we understand its  
uses and adaptation to its purpose  
This is called the beauty of utility By  
an easy transition, the word beauty is  
used to express what is pleasing to the  
other senses, or to the understanding  
Thus we say, the *beauty* of a thought,  
of a remark, of sound, &c

*Sola virtus, armata virtute hinc est, hinc

live. From these words, it appears that *belief* is from the root *leave*, permission, assent; Sax. *leaf*, and *belief*, fides; *leafa*, permission, license; written also *lif* and *lufa*; *lyfan*, to permit. The primary sense of *believe*, is to throw or put to, or to assent to; to leave with or to rest on; to rely. See LEAVE and LIVE.] 1. A persuasion of the truth, or an assent of mind to the truth of a declaration, proposition, or alleged fact, on the ground of evidence, distinct from personal knowledge; as, the *belief* of the gospel; *belief* of a witness. *Belief* may also be founded on internal impressions, or arguments and reasons furnished by our own minds; as, the *belief* of our senses; a train of reasoning may result in *belief*. *Belief* is opposed to *knowledge* and *science*. -- 2 In *theology*, faith, or a firm persuasion of the truths of religion.

No man can attain [to] *belief* by the bare contemplation of heaven and earth. Hooker.

3. Religion; the body of tenets held by the professors of faith.

In the heat of persecution, to which Christian *belief* was subject, upon its first promulgation. Hooker.

4. In some cases, the word is used for persuasion or opinion, when the evidence is not so clear as to leave no doubt; but the shades of strength in opinion can hardly be defined, or exemplified. Hence the use of qualifying words; as, a *firm*, *full*, or *strong belief*. -- 5. The thing believed; the object of belief.

Superstitious prophecies are the *belief* of fools. Bacon.

6. A creed; a form or summary of articles of faith. In this sense, we generally use *Creed*.

BELIEVABLE, *a*. That may be believed; credible.

BELIEVE, *v. t*. To credit upon the authority or testimony of another; to be persuaded of the truth of something upon the declaration of another, or upon evidence furnished by reasons, arguments, and deductions of the mind, or by other circumstances than personal knowledge. When we *believe* upon the authority of another, we always put confidence in his veracity. When we *believe* upon the authority of reasoning, arguments, or a concurrence of facts and circumstances, we rest our conclusions upon their strength or probability, their agreement with our own experience, &c. 2. To expect or hope with confidence; to trust.

I had fainted, unless I had *believed* to see the goodness of the Lord in the land of the living; Ps. xxvii.

BELIEVE, *v. i*. To have a firm persuasion of any thing. In some cases, to have a full persuasion, approaching to certainty; in others, more doubt is implied. It is often followed by *in* or *on*, especially in the Scriptures. To *believe in*, is, to hold as the object of faith. "Ye *believe in* God, *believe also in* me," John xiv. To *believe on*, is to trust, to place full confidence in, to rest upon with faith. "To them gave he power to become the sons of God, even to them that *believe on* his name," John i. But there is no ground for much distinction. In *theology*, to *believe* sometimes expresses a mere assent of the understanding to the truths of the gospel; as in the case of Simon, Acts viii. In others, the word implies, with this assent of the mind, a yielding

of the will and affections, accompanied with a humble reliance on Christ for salvation; John i. 12; iii. 18. In popular use and familiar discourse, to *believe* often expresses an opinion in a vague manner, without a very exact estimate of evidence, noting a mere preponderance of opinion, and is nearly equivalent to *think* or *suppose*.

BELIEVED, *pp*. Credited; assented to, as true.

BELIEVER, *n*. One who believes; one who gives credit to other evidence than that of personal knowledge. -- 2. In *theology*, one who gives credit to the truth of the Scriptures, as a revelation from God. In a more restricted sense, a professor of Christianity; one who receives the gospel, as unfolding the true way of salvation, and Christ as his Saviour. In the primitive Church, those who had been instructed in the truths of the gospel and baptized, were called *believers*; in distinction from the *catechumens*, who were under instruction, as preparatory to baptism and admission to church privileges.

BELIEVING, *ppr*. Giving credit to testimony or to other evidence than personal knowledge.

BELIEVINGLY, *adv*. In a believing manner.

BELIKE, *adv*. [*be* and *like*.] Probably; likely; perhaps. But perhaps from *be* and the Dan. *lykke*, luck. By luck or chance.

BELIKELY, *adv*. Probably.

BELINE, *v. t*. To besmear with lime.
